## Function and system design

### Measuring principle

Electronic measurement and conversion of input signals in industrial temperature measurement.

### Measuring system

The iTEMP® PCP TMT181 temperature head transmitter is a two wire transmitter with an analog output. It has measurement input for resistance thermometers (RTD) in 2-, 3- or 4-wire connection, thermocouples and voltage transmitters. Setting up of the TMT181 is done using the TXU10-AA configuration kit.
