## Technical Information

# Memosens measuring cable and installation accessories

CYK10 / CYK11

### Application

Measuring cable for all Memosens sensors and sensors with Memosens technology for nearly all parts of process engineering.

- The Memosens data cable CYK10 is used with sensors utilizing the contactless inductive signal transmission.
- The Memosens extension cable CYK11 is used for the connection of digital fixed-cable sensors with Memosens protocol. The following versions are available: Ferrule with ferrule, M12 female connector with ferrule and M12 female connector with M12 plug. CYK10 based installations can also be extended with CYK11.
- CYK10 and CYK11 can be extended with junction boxes.
- CYK10 available in versions for use in hazardous areas

### Your benefits

- Memosens data cable CYK10
  - Absolute waterproof connection (ingress protection IP 68)
  - No corrosion of contacts
  - No influence of interfering potentials thanks to galvanic isolation of transmitter and medium
- Memosens extension cable CYK11
  - Absolute waterproof connection (ingress protection IP 68)
  - Flexible and fast in application

## Function and system design

### Measuring system

- 1 Transmitter
- 2 Memosens extension cable CYK11 (optional)
- 3 Junction box (optional)
- 4 Memosens data cable CYK10 or fixed cable
- 5 Sensor

### Memosens

Memosens makes your measuring point safer and more reliable:

- Non-contact, digital signal transmission enables optimum galvanic isolation
- No contact corrosion
- Completely watertight
- Laboratory sensor calibration possible, thus increasing measured value availability
- Predictive maintenance thanks to recording of sensor data, e.g.:
  - Total hours of operation
  - Hours of operation with very high or very low measured values
  - Hours of operation with high temperatures
  - Number of steam sterilizations
  - Sensor condition
