Technical Information

Cerabar M PMC51, PMP51, PMP55

Process pressure measurement

Pressure transmitter with ceramic and metallic sensors;

With analog electronics or communication via HART,

PROFIBUS PA or FOUNDATION Fieldbus

Application

The Cerabar M pressure transmitter is used for the following measuring tasks:

- Absolute pressure and gauge pressure measurement in gases, steams or liquids in all areas of process engineering and process measurement technology
- Level, volume or mass measurements in liquids
- High process temperature
 - without diaphragm seals up to 130°C (266°F), for a maximum of 60 minutes 150 °C (302 °F)
 - with diaphragm seals up to 400°C (752°F)
- High pressure up to 400 bar (6000 psi)
- International usage thanks to a wide range of approvals

Your benefits

- Very good reproducibility and long-term stability
- High reference accuracy: up to $\pm 0.15\%$, as PLATINUM version: $\pm 0.075\%$
- Turn down up to 100:1
- End-to-end modularity for differential pressure, hydrostatics and pressure (Deltabar M – Deltapilot M – Cerabar M), e.g.
 - replaceable display
 - universal electronics
- Easy commissioning without the need for an operating tool
- Easy and safe menu-guided operation
 - on-site via display module
 - via 4 to 20 mA with HART
 - via PROFIBUS PA
 - via FOUNDATION Fieldbus
- Device versions compliant with ASME-BPE
- Used for process pressure monitoring up to SIL2, certified to IEC 61508 Edition 2.0 and IEC 61511 by TÜV NORD

Device selection

Cerabar M – Product family	PMC51  <small>P01-PMC51xxx-16-xx-xx-xx-000</small> With capacitive measuring cell and ceramic process isolating diaphragm (Ceraphire®)	PMP51  <small>P01-PMP51xxx-16-xx-xx-xx-000</small> With piezoresistive measuring cell and metallic welded process isolating diaphragm	PMP55  <small>P01-PMP55xxx-16-xx-xx-xx-000</small> With diaphragm seal
Field of application	– Gauge pressure and absolute pressure – Level		
Process connections	– Thread – EN flanges DN 25 – DN 80 – ANSI flanges 1" – 4" – JIS flanges 50 A – 100 A – Flush-mounted hygienic connections	– Thread – EN flanges DN 25 – DN 80 – ANSI flanges 1" – 4" – JIS flanges 25 A – 100 A – Prepared for diaphragm seal mount – Flush-mounted hygienic connections	– Wide range of diaphragm seals
Measuring ranges	From –100/0 to 100 mbar (–1.5/0 to 1.5 psi) to –1/0 to 40 bar (–15/0 to 600 psi)	From –400/0 to 400 mbar (–6/0 to 6 psi) to –1/0 to 400 bar (–15/0 to 6000 psi)	
OPL ¹⁾	Max. 60 bar (900 psi)	Max. 600 bar (9000 psi)	
Process temperature range	–40 to +130 °C (–40 to +266 °F) For a maximum of 60 minutes: +150 °C (+302 °F)	–40 to +130 °C (–40 to +266 °F) For a maximum of 60 minutes: +150 °C (+302 °F)	–70 to 400 °C (–94 to +752 °F) depending on the filling oil
Ambient temperature range	– Without LCD display: –40 to +85 °C (–40 to +185 °F) – With LCD display: –20 to +70 °C (–4 to +158 °F) (extended temperature application range (–40 to 85 °C (–40 to 185 °F)) with restrictions in optical properties such as display speed and contrast) – Separate housing: –20 to +60 °C (–4 to +140 °F) – Diaphragm seal systems depending on the version		
Reference accuracy	– Up to ±0.15% of the set span – PLATINUM version: up to ±0.075% of the set span		Up to ±0.15% of the set span
Supply voltage	– 11.5 to 45 V DC (versions with plug-in connection 35 V DC) – For intrinsically safe device versions: 11.5 to 30 V DC		
Output	4 to 20 mA, 4 to 20 mA with superimposed HART protocol		
Options	– PMP51, PMP55: NACE-compliant materials – PMC51, PMP51, PMP55: inspection certificate 2.2 or 3.1 or other certificates – 3A approval and EHEDG approval – Specific firmware versions – Initial device settings – Separate housing – Broad range of accessories		
Specialties	– Metal-free measurement with PVDF connection – Special cleaning of the transmitter to remove paint-wetting substances, for use in paint shops	– Process connections with minimum oil volume – Gas-tight, elastomer-free	– Wide range of diaphragm seals – For extreme medium temperatures – Process connections with minimum oil volume – Completely welded versions

1) OPL = over pressure limit; depends on the lowest-rated element, with regard to pressure, of the selected components

Measuring principle

Ceramic process isolating diaphragm used in PMC51 (Ceraphire®)

Ceramic sensor

- 1 Air pressure (gauge pressure sensors)
- 2 Ceramic substrate
- 3 Electrodes
- 4 Ceramic process isolating diaphragm

Metallic process isolating diaphragm used in PMP51 and PMP55

Metallic sensor

- 1 Silicon measuring element, substrate
- 2 Wheatstone bridge
- 3 Channel with fill fluid
- 4 Metallic process isolating diaphragm

Ceramic process isolating diaphragm used in PMC51 (Ceraphire®)

The ceramic sensor is a dry sensor, i.e. the process pressure acts directly on the robust ceramic process isolating diaphragm and deflects it. A pressure-dependent change in capacitance is measured at the electrodes of the ceramic substrate and the process isolating diaphragm. The measuring range is determined by the thickness of the ceramic process isolating diaphragm.

Advantages:

- Guaranteed overload resistance up to 40 times the nominal pressure
- Thanks to ultrapure 99.9% ceramic (Ceraphire®, see also "www.endress.com/ceraphire")
 - extremely high chemical stability, comparable with Alloy C
 - less relaxation
 - high mechanical stability
- Can be used in absolute vacuum
- Outstanding surface finish, $R_a \leq 0.3 \mu\text{m}$ ($11.8 \mu\text{in}$)

Metallic process isolating diaphragm used in PMP51 and PMP55

PMP51

The operating pressure deflects the process isolating diaphragm and a fill fluid transfers the pressure to a resistance bridge (semiconductor technology). The pressure-dependent change in the bridge output voltage is measured and evaluated.

Advantages:

- Can be used for process pressure up to 400 bar (6000 psi)
- High long-term stability
- Guaranteed overload resistance up to 4 times the nominal pressure
- Significantly less thermal effect compared to diaphragm seal systems

PMP55

The operating pressure acts on the process isolating diaphragm of the diaphragm seal and is transferred to the process isolating diaphragm of the sensor by a diaphragm seal fill fluid. The process isolating diaphragm is deflected and a fill fluid transfers the pressure to a resistance bridge. The pressure-dependent change in the bridge output voltage is measured and evaluated.

Advantages:

- Depending on the version, can be used for process pressure up to 400 bar (6000 psi) and simultaneous extreme process temperatures
- High long-term stability
- Guaranteed overload resistance up to 4 times the nominal pressure

Level measurement (level, volume and mass)

Function and design

Level measurement

h	Height (level)
p	Pressure
ρ	Density of the medium
g	Gravitation constant

Your benefits

- Choice of different level measuring modes in the device software
- Volume and mass measurements in any tank shapes by means of a freely programmable characteristic curve
- Choice of diverse level units
- Has a wide range of uses, even in the following cases:
 - in the event of foam formation
 - in tanks with agitators or screen fittings
 - in the event of liquid gases

Electrical differential pressure measurement with gauge pressure sensors

- 1 Shut-off valves
2 e.g. filter

In the example given, two Cerabar M devices (each with a gauge pressure sensor) are interconnected. The pressure difference can thus be measured using two independent Cerabar M devices.

Caution!

If using intrinsically safe devices, strict compliance with the rules for interconnecting intrinsically safe circuits as stipulated in IEC60079-14 (proof of intrinsic safety) is mandatory.

System integration (except analog electronics)

The device can be fitted with a tag name and a preset bus address, see → 82 ff "Ordering information" feature 895 "Identification:" version "Z1" and "Z2".

Communication protocol

- 4 to 20 mA without communication protocol (analog electronics)
- 4 to 20 mA with HART communication protocol
- PROFIBUS PA
 - The Endress+Hauser devices meet the requirements of the FISCO model.
 - Due to the low current consumption of $11 \text{ mA} \pm 1 \text{ mA}$, the following number of devices can be operated on one bus segment if installing as per FISCO:
 - up to 8 Cerabar M for Ex ia, CSA IS and FM IS applications
 - up to 31 Cerabar M for all other applications, e.g. in non-hazardous areas, Ex nA, etc.

Further information on PROFIBUS PA can be found in Operating Instructions BA00034S "PROFIBUS DP/PA: Guidelines for planning and commissioning" and in the PNO Guideline.
- FOUNDATION Fieldbus
 - The Endress+Hauser devices meet the requirements of the FISCO model.
 - Due to the low current consumption of $16 \text{ mA} \pm 1 \text{ mA}$, the following number of devices can be operated on one bus segment if installing as per FISCO:
 - up to 6 Cerabar M for Ex ia, CSA IS and FM IS applications
 - up to 22 Cerabar M for all other applications, e.g. in non-hazardous areas, Ex nA, etc.

Further information on FOUNDATION Fieldbus, such as requirements for bus system components can be found in Operating Instructions BA00013S "FOUNDATION Fieldbus Overview".

Input

Measured variable

- Analog electronics: Absolute pressure and gauge pressure
- HART electronics: Absolute pressure and gauge pressure, from which level (level, volume or mass) is derived

Measuring range

PMC51 – with ceramic process isolating diaphragm (Ceraphire®) for gauge pressure

Nominal value	Range limit		Smallest calibratable span (preset at the factory) ¹⁾	MWP ²⁾	OPL ³⁾	Vacuum resistance	Version in the order code ⁴⁾

- 1) Recommended turn down: Max 10:1.
Factory calibration turn down: Max 20:1, higher on request or configurable in the device.
- 2) The MWP (maximum working pressure) for the measuring device depends on the lowest-rated element, with regard to pressure, of the selected components, i.e. the process connection (→ 33 ff) has to be taken into consideration in addition to the measuring cell (→ see Table above). Pay attention to the pressure-temperature dependence also. For the appropriate standards and other information, see → 32, "Pressure specifications" section.
- 3) OPL: over pressure limit (= sensor overload limit)
- 4) The vacuum resistance applies to the measuring cell at reference conditions. The pressure and temperature application limits of the selected filling oil must also be observed for the PMP55. → 77, "Diaphragm seal filling oils" section.
- 5) Version in the order code → 82 ff, feature 70 "Sensor range"

Explanation of terms

Explanation of terms: turn down (TD), set span and span based on zero point

Case 1:

- Lower range value (LRV) \leq Upper range value (URV)

Example:

- Lower range value (LRV) = 0 bar
- Upper range value (URV) = 0.5 bar (7.5 psi)
- Nominal value (URL) = 1 bar (15 psi)

Turn down:

- $TD = URL / |URV| = 2:1$

Set span:

- $URV - LRV = 0.5 \text{ bar (7.5 psi)}$
This span is based on the zero point.

P01-PMx7xxxx-05-xx-xx-xx-012

Example: 1 bar (15 psi) measuring cell

Case 2:

- Lower range value (LRV) \leq Upper range value (URV)

Example:

- Lower range value (LRV) = 0 bar
- Upper range value (URV) = 0.5 bar (7.5 psi)
- Nominal value (URL) = 1 bar (15 psi)

Turn down:

- $TD = URL / |URV| = 2:1$

Set span:

- $URV - LRV = 0.5 \text{ bar (7.5 psi)}$
This span is based on the zero point.

P01-PMx7xxxx-05-xx-xx-xx-007

Example: 1 bar (15 psi) measuring cell

Case 3:

- Lower range value (LRV) \geq Upper range value (URV)

Example:

- Lower range value (LRV) = -0.6 bar (-9 psi)
- Upper range value (URV) = 0 bar
- Nominal value (URL) = 1 bar (15 psi)

Turn down:

- $TD = URL / |LRV| = 1.67:1$

Set span:

- $URV - LRV = 0.6 \text{ bar (-9 psi)}$
This span is based on the zero point.

P01-PMx7xxxx-05-xx-xx-xx-008

Example: 1 bar (15 psi) measuring cell

- Set span
- Span based on zero point
- Nominal value $\hat{=}$ upper range limit (URL)
- Nominal measuring range
- Sensor measuring range
- LRL Lower range limit
- URL Upper range limit
- LRV Lower range value
- URV Upper range value

Output

Load - 4 to 20 mA analog and 4 to 20 mA HART

Load diagram

- 1 Power supply 11.5 to 30 V DC for intrinsically safe device versions
- 2 Power supply 11.5 to 45 V DC (versions with plug-in connector 35 V DC) for other types of protection and for uncertified device versions
- R_{Lmax} Maximum load resistance
- U Supply voltage

Note!

When operating via a handheld terminal or via a PC with an operating program, a minimum communication resistance of 250 Ω must be taken into account.

Resolution	<ul style="list-style-type: none"> ■ Current output: 1 μA ■ Display HART: can be set (factory setting: presentation of the maximum accuracy of the transmitter)
-------------------	--

Dead time, Time constant

Presentation of the dead time and the time constant

**Dynamic behavior:
current output (analog
electronics)**

	Type	Dead time (t_1) [ms]	Time constant T63 (= t_2) [ms]	Time constant T90 (= t_3) [ms]
max.	PMC51	60	40	50
max.	PMP51	40	40	50
max.	PMP55	PMP51 + influence of the diaphragm seal		

**Dynamic behavior:
current output (HART
electronics)**

	Type	Dead time (t_1) [ms]	Time constant T63 (= t_2) [ms]	Time constant T90 (= t_3) [ms]
max.	PMC51	50	85	200
max.	PMP51	70	80	185
max.	PMP55	PMP51 + influence of the diaphragm seal		

**Dynamic behavior: digital
output (HART electronics)**

	Type	Dead time (t_1) [ms]	Dead time (t_1) [ms] + Time constant T63 (= t_2) [ms]	Dead time (t_1) [ms] + Time constant T90 (= t_3) [ms]
min.	PMC51	210	295	360
max.		1010	1095	1160
min.	PMP51	210	285	345
max.		1010	1085	1145
max.	PMP55	PMP51 + influence of the diaphragm seal		

Reading cycle

- Acyclic: max. 3/s, typical 1/s (depends on command # and number of preambles)
- Cyclic (Burst): max. 3/s, typical 2/s

The Cerabar M commands the BURST MODE function for cyclic value transmission via the HART communication protocol.

Cycle time (Update time)

Cyclic (Burst): min. 300 ms

Response time

- Acyclic: min. 330 ms, typical 590 ms (depends on command # and number of preambles)
- Cyclic (Burst): min. 160 ms, typical 350 ms (depends on command # and number of preambles)

**Dynamic behavior:
PROFIBUS PA**

	Type	Dead time (t_1) [ms]	Dead time (t_1) [ms] + Time constant T63 (= t_2) [ms]	Dead time (t_1) [ms] + Time constant T90 (= t_3) [ms]
min.	PMC51	85	170	235
max.		1185	1270	1335
min.	PMP51	85	160	220
max.		1185	1260	1320
max.	PMP55	PMP51 + influence of the diaphragm seal		

Reading cycle

- Cyclic: max. 30/s (dependent on the number and type of function blocks used in a closed-control loop)
- Acyclic: typical 25/s

Cycle time (update time)

min. 100 ms

The cycle time in a bus segment in cyclic data communication depends on the number of devices, on the segment coupler used and on the internal PLC cycle time.

Response time

- Cyclic: approx. 8 to 13 ms (depends on Min. Slave Interval)
- Acyclic: approx. 23 to 35 ms (depends on Min. Slave Interval)

**Dynamic behavior:
FOUNDATION Fieldbus**

	Type	Dead time (t_1) [ms]	Dead time (t_1) [ms] + Time constant T63 (= t_2) [ms]	Dead time (t_1) [ms] + Time constant T90 (= t_3) [ms]
min.	PMC51	95	180	245
max.		1095	1180	1245
min.	PMP51	95	170	230
max.		1095	1170	1230
max.	PMP55	PMP51 + influence of the diaphragm seal		

Reading cycle

- Cyclic: max. 10/s (dependent on the number and type of function blocks used in a closed-control loop)
- Acyclic: typical 5/s

Cycle time (update time)

Cyclic: min. 100 ms

Response time

- Cyclic: max. 20 ms (for standard bus parameter settings)
- Acyclic: typical 70 ms (for standard bus parameter settings)

Damping

A damping affects all outputs (output signal, display).

- Via on-site display, handheld terminal or PC with operating program, continuous from 0...999 s
- Via DIP-switch on the electronic insert, switch position
"on" (= set value) and "off" (= damping switched off)
- Factory setting: 2 s

Transducer Blocks

Block	Content	Output values
TRD1 Block	Contains all parameters related to the measurement	<ul style="list-style-type: none"> ■ Pressure or level (channel 1) ■ Process temperature (channel 2) ■ Measured pressure value (channel 3) ■ Max. pressure (channel 4) ■ Level before linearization (channel 5)
Diagnostic Block	Contains diagnostic information	Error code via DI channels (channel 10 to 15)
Display Block	Contains parameters to configure the onsite display	No output values

Function blocks

Block	Content	Number of blocks	Execution time	Functionality
Resource Block	The Resource Block contains all the data that uniquely identify the device. It is an electronic version of a nameplate of the device.	1		enhanced
Analog Input Block 1 Analog Input Block 2	The AI Block receives the measuring data from the Sensor Block, (selectable via a channel number) and makes the data available to other function blocks at its output. Enhancement: digital outputs for process alarms, fail safe mode.	2	25 ms	enhanced
Digital Input Block	This block contains the discrete data of the Diagnose Block (selectable via a channel number 10 to 15) and provides them for other blocks at the output.	1	20 ms	standard
Digital Output Block	This block converts the discrete input and thus initiates an action (selectable via a channel number) in the DP Flow Block or in the im TRD1 Block. Channel 20 resets the counter for max. pressure transgressions value and Channel 21 resets the Totalizer.	1	20 ms	standard
PID Block	The PID Block serves as a proportional-integral-derivative controller and is used almost universally for closed-loop-control in the field including cascade and feedforward. Input IN can be indicated on the display. The selection is performed in the Display Block (DISPLAY_MAIN_LINE_CONTENT).	1	40 ms	standard
Arithmetic Block	This block is designed to permit simple use of popular measurement math functions. The user does not have to know how to write equations. The math algorithm is selected by name, chosen by the user for the function to be performed.	1	35 ms	standard
Input Selector Block	The Input Selector Block facilitates the selection of up to four inputs and generates an output based on the configured action. This block normally receives its inputs from AI Blocks. The block performs maximum, minimum, average and 'first good' signal selection. Inputs IN1 to IN4 can be indicated on the display. The selection is performed in the Display Block (DISPLAY_MAIN_LINE_1_CONTENT).	1	30 ms	standard
Signal Characterizer Block	The Signal Characterizer Block has two sections, each with an output that is a non-linear function of the respective input. The non-linear function is generated by a single look-up table with 21 arbitrary x-y pairs.	1	40 ms	standard
Integrator Block	The Integrator Block integrates a variable as a function of the time or accumulates the counts from a Pulse Input Block. The block may be used as a totalizer that counts up until reset or as a batch totalizer that has a setpoint, where the integrated or accumulated value is compared to pre-trip and trip settings, generating a binary signal when the setpoint is reached.	1	35 ms	standard

Additional function block information:

Instantiate Function Block	YES
Number of instantiate blocks	20

Power supply

Electrical connection

Note!

- When using the measuring device in hazardous areas, installation must comply with the corresponding national standards and regulations and the Safety Instructions or Installation or Control Drawings.
→ 98 ff, "Safety Instructions" and "Installation/Control Drawings" sections.
- According to IEC/EN61010 a suitable disconnecter has to be installed for the device
- HART: Overvoltage protection HAW569-DA2B for the non-hazardous area, ATEX II 2 (1) Ex ia IIC and IEC Ex ia can be ordered as an option (see "Ordering information" section).
- Protective circuits against reverse polarity, HF influences and overvoltage peaks are installed.
- The digital communication signal is transmitted to the bus via a 2-wire connection. The bus also provides the power supply.

P01-xlMa5xxxx-04-xx-xx-xx-004

Electrical connection

- 1 External grounding terminal
- 2 Internal grounding terminal
- 3 Supply voltage → 18
- 4 4...20 mA for HART devices
- 5 For HART and FOUNDATION Fieldbus devices: With a handheld terminal, all the parameters can be configured anywhere along the bus line via menu operation.
- 6 Terminals
- 7 For HART devices: test terminals, see section "Taking 4 to 20 mA test signal"

4 to 20 mA Analog, 4 to 20 mA HART

Taking 4 to 20 mA test signal

A 4 to 20 mA test signal may be measured via the test terminals without interrupting the measurement.

PROFIBUS PA

For further information on the network structure and grounding, and for further bus system components such as bus cables, see the relevant documentation, e.g. Operating Instructions BA00034S "PROFIBUS DP/PA: Guidelines for planning and commissioning" and the PNO Guideline.

Cable specifications:

Use a twisted, shielded two-wire cable, preferably cable type A

Note!

For further information on the cable specifications, see Operating Instructions BA00034S "PROFIBUS DP/PA: Guidelines for planning and commissioning", the PNO Guideline 2.092 PROFIBUS PA User and Installation Guideline" and IEC 61158-2 (MBP).

FOUNDATION Fieldbus

The digital communication signal is transmitted to the bus via a 2-wire connection. The bus also provides the power supply. For further information on the network structure and grounding and for further bus system components such as bus cables, see the relevant documentation, e.g. Operating Instructions BA00013S "FOUNDATION Fieldbus Overview" and the FOUNDATION Fieldbus Guideline.

Cable specifications:

Use a twisted, shielded two-wire cable, preferably cable type A

Note!

For further information on the cable specifications, see Operating Instructions BA00013S "FOUNDATION Fieldbus Overview", FOUNDATION Fieldbus Guideline and IEC 61158-2 (MBP).

Devices with M12 plug*PIN assignment for M12 connector*

	PIN	Meaning
	1	Signal +
	2	Not assigned
	3	Signal –
	4	Earth

Endress+Hauser offers the following accessories for devices with an M12 plug:

Plug-in jack M 12x1, straight

- Material: body PA; coupling nut CuZn, nickel-plated
- Degree of protection (fully locked): IP66/67
- Order number: 52006263

Plug-in jack M 12x1, elbowed

- Material: body PBT/PA; coupling nut GD-Zn, nickel-plated
- Degree of protection (fully locked): IP66/67
- Order number: 71114212

Cable 4x0.34 mm² (20 AWG) with M12 socket, elbowed, screw plug, length 5 m (16 ft)

- Material: body PUR; coupling nut CuSn/Ni; cable PVC
- Degree of protection (fully locked): IP66/67
- Order number: 52010285

Devices with 7/8" plug*PIN assignment for 7/8" connector*

	PIN	Meaning
	1	Signal –
	2	Signal +
	3	Shield
	4	Not assigned

External thread: 7/8 – 16 UNC

- Material: housing / body CuZn, nickel-plated
- Protection: IP66/68

Cable gland

Approval	Type	Clamping area
Standard, II1/2G Exia, IS	Plastic M20x1.5	5 to 10 mm (0.2 to 0.39 in)
ATEX II1/2D, II1/2GD Exia, II3G Ex nA	Metal M20x1.5 (Ex e)	7 to 10.5 mm (0.28 to 0.41 in)

Terminals

For wire cross-sections of 0.5 to 2.5 mm² (20 to 14 AWG).

Supply voltage

Note!

- When using the measuring device in hazardous areas, installation must comply with the corresponding national standards and regulations and the Safety Instructions or Installation or Control Drawings.
- All explosion protection data are given in separate documentation which is available upon request. The Ex documentation is supplied as standard with all devices approved for use in explosion hazardous areas. → 98 ff, "Safety Instructions" and "Installation/Control Drawings" sections.

4 to 20 mA, 4 to 20 mA HART

Type of protection	Supply voltage
■ Intrinsically safe	11.5 ... 30 V DC
■ Other types of protection ■ Devices without certificate	11.5 ... 45 V DC (Versions with plug-in connection 35 V DC)

PROFIBUS PA

- Version for non-hazardous areas: 9 to 32 V DC

FOUNDATION Fieldbus

- Version for non-hazardous areas: 9 to 32 V DC

Start-up current HART	12 mA or 22 mA (selectable)
Current consumption	<ul style="list-style-type: none"> ■ PROFIBUS PA: 11 mA \pm 1 mA, switch-on current corresponds to IEC 61158-2, Clause 21 ■ FOUNDATION Fieldbus: 16 mA \pm 1 mA, switch-on current corresponds to IEC 61158-2, Clause 21
Cable entry	→  82 ff, feature 50 "Electrical connection".
Cable specification	<ul style="list-style-type: none"> ■ Endress+Hauser recommends using twisted, shielded two-wire cables. ■ Terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG) ■ Cable outer diameter: 5 to 9 mm (0.2 to 0.35 in) depends on the used cable gland (→  18)
Residual ripple	No influence on 4 to 20 mA signal up to \pm 5 % residual ripple within the permitted voltage range [according to HART hardware specification HCF_SPEC-54 (DIN IEC 60381-1)]
Influence of power supply	\leq 0.001% of URL/1 V

Performance characteristics – general

Reference operating conditions	<ul style="list-style-type: none"> ■ As per IEC 60770 ■ Ambient temperature T_A = constant, in the range of: +21 to +33°C (+70 to +91°F) ■ Humidity ϕ = constant, in the range of: 5 to 80 % RH ■ Ambient pressure p_A = constant, in the range of: 860 to 1060 mbar (12.47 to 15.37 psi) ■ Position of the measuring cell: constant, in range: \pm1° horizontally ■ Input of LOW SENSOR TRIM and HIGH SENSOR TRIM for lower range value and upper range value ■ Span based on zero point ■ Material of the process isolating diaphragm PMC51: Al₂O₃ (aluminum-oxide ceramic, Ceraphire®) ■ Material of the process isolating diaphragm PMP51 and PMP55: AISI 316L ■ Filling oil PMP51 and PMP55: silicone oil ■ Supply voltage: 24 V DC \pm 3 V DC ■ Load with HART: 250 Ω
Uncertainty of measurement for small absolute pressure ranges	<p>The smallest expanded uncertainty of measurement that can be returned by our standards is:</p> <ul style="list-style-type: none"> ■ 0.4% of the measured value in the range of 1 to 30 mbar ■ 1% of the measured value in the range < 1 mbar.

Long-term stability

Operating conditions (installation)

General installation instructions

- The position-dependent zero point shift can be corrected:
 - directly at the device via operating keys on the electronic insert
 - directly at the device via operating keys on the display (except analog electronics)
 - via digital communication if the cover is not open (except analog electronics)
- Note!
In hazardous areas, comply strictly with the safety instructions when the housing cover is closed and open.
- Endress+Hauser offers a mounting bracket for installing the device on pipes or walls.
See also →  26, "Wall and pipe mounting" section.
- Use flushing rings for flange and cell diaphragm seals if medium buildup or clogging can be expected at the diaphragm seal connection. The flushing ring can be inserted between the process connection and the diaphragm seal. Thanks to the two lateral flushing bore holes, material buildup in front of the process isolating diaphragm can be rinsed away and the pressure chamber can be ventilated.
- To guarantee the leak-tightness of the transmitter, Endress+Hauser recommends that only genuine cable glands be used (also available as spare parts).

Measuring arrangement for devices without diaphragm seal – PMC51, PMP51

Cerabar M transmitters without diaphragm seals are mounted as per the norms for a manometer (DIN EN 837-2). We recommend the use of shutoff devices and siphons. The orientation depends on the measuring application.

Pressure measurement in gases

- Mount Cerabar M with shutoff device above the tapping point so that any condensate can flow into the process.

Pressure measurement in steams

- Mount Cerabar M with siphon above the tapping point.
- Fill the siphon with liquid before commissioning.
The siphon reduces the temperature to almost the ambient temperature.

Pressure measurement in liquids

- Mount Cerabar M with shutoff device below or at the same level as the tapping point.

Level measurement

- Mount Cerabar M below the lowest measuring point (zero point of the measurement).
- Do not mount the device at the following positions: In the filling curtain, in the tank outlet or at a point in the container which could be affected by pressure pulses from an agitator or a pump.
- The calibration and functional test can be carried out more easily if you mount the device downstream of a shutoff device.

Measuring arrangement for devices with diaphragm seal – PMP55

- →  76, "Planning instructions for diaphragm seal systems" section.

Wall and pipe mounting

For installing the device on pipes or walls, Endress+Hauser provides a mounting bracket which is included in the scope of supply or can be ordered as a separate accessory (part no. 71102216).
For the dimensions, see →  66.

"Separate housing" version

With the "separate housing" version, you are able to mount the housing with the electronics insert at a distance from the measuring point. This version allows for trouble-free measurement:

- Under particularly difficult measuring conditions (at installation locations that are cramped or difficult to access)
- If extreme cleaning of the measuring point is required
- If the measuring point is exposed to vibrations
- For space-saving installations

You can choose between different cable versions:

- PE (2 m (6.6 ft), 5 m (16 ft) and 10 m (33 ft))
- FEP (5 m (16 ft)).

→ 82 ff, feature 600, "Separate housing".

For the dimensions, → 66.

In the case of the "separate housing" version, the sensor is delivered with the process connection and cable ready mounted. The housing and a mounting bracket are enclosed as separate units. The cable is provided with a socket at both ends. These sockets are simply connected to the housing and the sensor.

- 1 Process connection with sensor
- 2 Cable, both ends are fitted with a socket
- 3 Mounting bracket provided, suitable for pipe and wall mounting (for pipes from 1 1/4" up to 2" diameter)
- 4 Housing with electronic insert

Degree of protection for the process connection and sensor with the use of

- FEP cable:
 - IP 69K
 - IP 66 NEMA 4/6P
 - IP 68 (1.83 mH₂O for 24 h) NEMA 4/6P
- PE cable:
 - IP 66 NEMA 4/6P
 - IP 68 (1.83 mH₂O for 24 h) NEMA 4/6P

Technical data of the PE and FEP cable:

- Minimum bending radius: 120 mm (4.72 in)
- Cable extraction force: max. 450 N (101 lbf)
- Resistance to UV light

Use in hazardous area:

- Intrinsically safe installations (Ex ia/IS)
- FM/CSA IS: for Div.1 installation only

Reduction in installation height

If the separate housing is used, the mounting height of the process connection is reduced compared to the dimensions of the standard version (see graphic).

P01-zMa5xxxx-06-xx-xx-xx-000

Oxygen applications

Oxygen and other gases can react explosively to oils, grease and plastics. As a result, the following are some of the precautions that must be taken:

- All components of the system, such as measuring devices, must be cleaned in accordance with the BAM (DIN 19247) requirements.
- Depending on the materials used, a certain maximum temperature and maximum pressure must not be exceeded for oxygen applications.

The devices suitable for gaseous oxygen applications are listed in the following table with the specification p_{\max} .

Ordering code for devices ¹⁾ cleaned for oxygen applications	p_{\max} for oxygen applications	T_{\max} for oxygen applications
PMC51 ²⁾ – devices with sensors, nominal value < 10 bar (150 psi)	Over pressure limit (OPL) of sensor ^{3), 4)}	60°C (140°F)
PMC51 ²⁾ – devices with sensors, nominal value ≥ 10 bar (150 psi)	40 bar (600 psi)	60°C (140°F)
PMP51 PMP55 ²⁾	Depends on the lowest-rated element, with regard to pressure, of the selected components: over pressure limit (OPL) of sensor ³⁾ , process connection (1.5 x PN) or fill fluid (160 bar (2320 psi))	85°C (185°F)

- 1) Only device, not accessory or enclosed accessory
- 2) Feature 570 "Service" version "HB"
- 3) → 82 ff "Ordering information", feature 70 "Sensor range"
- 4) PMC51 with PVDF thread or PVDF flange $p_{\max} = 15$ bar (225 psi)

PWIS cleaning

Special cleaning of the transmitter to remove paint-wetting substances, for use in paint shops
→ 85 feature 570 "Service", version "HC".

Ultrapure gas applications

Endress+Hauser also provides devices which have been cleaned of oil and grease for special applications, such as for ultrapure gas. No special restrictions regarding the process conditions apply to these devices.

- 82 ff, "Ordering information PMC51", feature 570 "Service" version "HA".
- 88 ff, "Ordering information PMP51", feature 570 "Service" version "HA".

Applications with hydrogen

With regard to materials in which hydrogen formation takes place, hydrogen atoms can diffuse through the metallic process isolating diaphragm. This can result in incorrect measurement results. Endress+Hauser offers process isolating diaphragms with a gold/rhodium coating for such instances.

- 87 ff "Ordering information PMP51" and
- 92 ff "Ordering information PMP55", feature 170 "Membrane Material" version "M".

Operating conditions (environment)

Ambient temperature range

Version	PMC51	PMP51	PMP55
Without LCD display	–40°C to +85°C (–40°F to +185°F)		
With LCD display ¹⁾	–20°C to +70°C (–4°F to +158°F)		
With M12 plug , elbowed	–25°C to +85°C (–13°F to +185°F)		
With separate housing	–20°C to +60°C (–4°F to +140°F) (installation without insulation)		—
Diaphragm seal systems	—	—	→ 76

1) Extended temperature application range (–40°C to +85°C (–40°F to +185°F)) with restrictions in optical properties such as display speed and contrast

Note!

For high-temperature applications, either a PMP55 with a temperature isolator or with a capillary can be used. If vibrations also occur in the application, Endress+Hauser recommends you use a PMP55 with a capillary. If a PMP55 with a temperature isolator or capillary is used, we recommend a suitable bracket for mounting (see "Wall and pipe mounting" section on → 26).

For devices for use in hazardous areas, see Safety Instructions, Installation or Control Drawing. (→ 98 ff, "Safety Instructions" and "Installation/Control Drawings" sections)

Storage temperature range

Version	PMC51	PMP51	PMP55
Without LCD display	–40°C to +90°C (–40°F to +194°F)		
With LCD display	–40°C to +85°C (–40°F to +185°F)		
With M12 plug , elbowed	–25°C to +85°C (–13°F to +185°F)		
With separate housing	–40°C to +60°C (–40°F to +140°F)		—
Diaphragm seal systems	—	—	→ 76

Degree of protection

- → 82 ff, feature 50 "Electrical connection".
- Separate housing (→ 27)

Climate class

Class 4K4H (air temperature: –20 to 55°C (–4 to +131°F), relative humidity: 4 to 100%) satisfied as per DIN EN 60721-3-4 (condensation possible).

Vibration resistance

Device/Additional option	Test standard	Vibration resistance
Devices without mounting bracket	GL VI-7-2 <ul style="list-style-type: none"> ■ Part 7: Guidelines for the Performance of Type Approvals ■ Chapter 2: Test Requirements for Electrical / Electronic Equipment and Systems 	guaranteed for 5 to 25 Hz: ± 1.6 mm (0.06 in); 25 to 100 Hz: 4 g in all 3 planes
	IEC 61298-3 IEC 60068-2-6	guaranteed for 10 to 60 Hz: ± 0.35 mm (0.01 in); 60 to 2000 Hz: 2 g in all 3 planes
Devices with mounting bracket	IEC 61298-3 IEC 60068-2-6	guaranteed for 10 to 60 Hz: ± 0.15 mm (0.01 in); 60 to 500 Hz: 2 g in all 3 planes

Note!

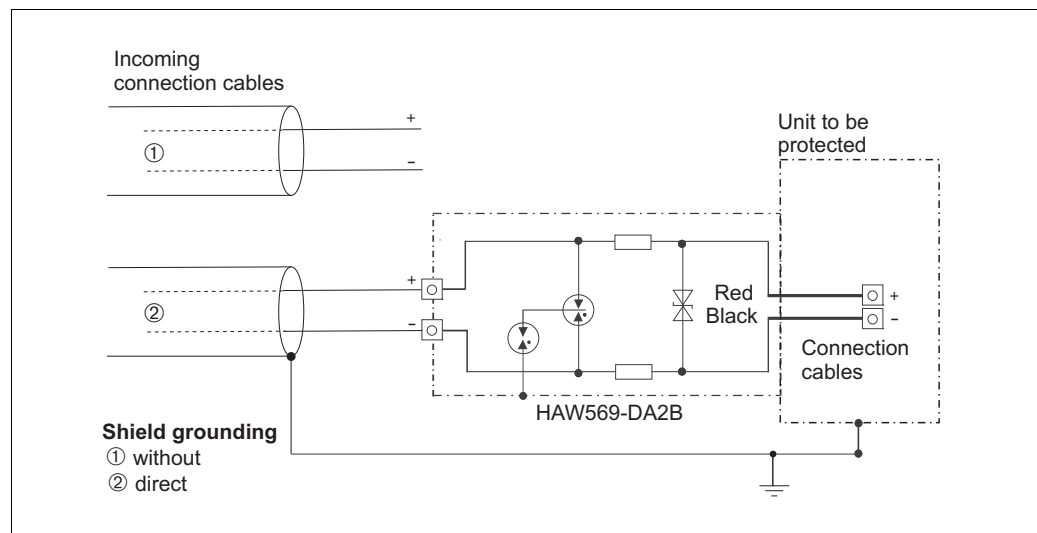

For high-vibration applications, either a PMC51/PMP51 with a separate housing or a PMP55 with a capillary can be used. We recommend a suitable bracket for mounting (see "Wall and pipe mounting" section on → 26).

Electromagnetic compatibility

- Electromagnetic compatibility as per all the relevant requirements of the EN 61326 series and NAMUR Recommendation EMC (NE21). Details can be found in the Declaration of Conformity (in the Download area of "www.de.endress.com", "search area - Approvals and Certificates", "Manufact. Declaration").
- Maximum deviation: < 0.5 % of span

Overvoltage protection (optional)

The device can be fitted with overvoltage protection, see → 82 ff "Ordering information" feature 610 "Accessory mounted:" version "NA". The overvoltage protection is mounted at the factory on the housing thread (M20x1.5) for the cable gland and is approx. 70 mm (2.76 in) in length (take additional length into account when installing). The device is connected as illustrated in the following graphic. For details refer to TI001013KEN, XA01003KA3 and BA00304KA2.

P01-xMx5xxxx-04-xx-xx-en-006

Operating conditions (process)

Process temperature range PMC51

1) With feature 570 "Service", version "HB - Cleaned for oxygen service"

2) Suitable for foods FDA 21 CFR 177.2600

Applications with jumps in temperature

Extreme jumps in temperature can result in temporary measuring errors. Temperature compensation takes effect after several minutes. Internal temperature compensation is faster the smaller the jump in temperature and the longer the time interval involved.

For further information please contact your local Endress+Hauser Sales Center.

PMP51 (with metallic process isolating diaphragm)

Description	Temperature operating range
Process connections with internal process isolating diaphragm	-40 to +125°C (-40 to +257°F)
Process connections with flush-mounted process isolating diaphragm, G 1 A, G 1 1/2 A, G 2 A, 1 NPT, 1 1/2 NPT, 2 NPT, M 44 x 1.25, EN/DIN, ANSI and JIS flanges	-40 to +100°C (-40 to +212°F)
Process connections with flush-mounted process isolating diaphragm, G 1/2 A, M 20x1.5	-20 to +85°C (-4 to +185°F)
Hygienic process connections	-40 to +130 °C (-40 to +266 °F) For a maximum of 60 minutes: +150 °C (+302 °F)

PMP55 (with diaphragm seal)

- Depending on the diaphragm seal and filling oil from -70°C (-94°F) up to +400°C (+752°F). Observe the temperature application limits → 76.

Note!

- The PTFE foil used is designed to protect the unit against abrasion. It does not provide protection against corrosive media.
- Do not use diaphragm seals with 0.25 mm (0.01 in) PTFE foil on AISI 316L (1.4435/1.4404) for vacuum applications, upper temperature limit +204 °C (+399 °F).
- For oxygen applications, observe → 28, "Oxygen applications" section.

Pressure specifications

- The maximum pressure for the measuring device depends on the lowest-rated element with regard to pressure.
See the following sections:
 - → 8 ff, "Measuring range" section
 - "Mechanical construction" section.
 The MWP (maximum working pressure) is specified on the nameplate. This value refers to a reference temperature of +20°C (68°F), or 100°F (38°C) for ANSI flanges, and may be applied to the device for an unlimited time. Observe temperature dependency of the MWP.
- The pressure values permitted at higher temperatures can be found in the following standards:
 - EN 1092-1: 2001 Tab. 18¹
 - ASME B 16.5a – 1998 Tab. 2-2.2 F316
 - ASME B 16.5a – 1998 Tab. 2.3.8 N10276
 - JIS B 2220.
- The test pressure corresponds to the over pressure limit of the device (over pressure limit OPL = 1.5 x MWP²) and may be applied for only a limited time period in order to avoid permanent damage.
- The Pressure Equipment Directive (EC Directive 97/23/EC) uses the abbreviation "PS". The abbreviation "PS" corresponds to the MWP (maximum working pressure) of the measuring device.
- In the case of sensor range and process connection combinations where the OPL (over pressure limit) of the process connection is smaller than the nominal value of the sensor, the device is set at the factory, at the very maximum, to the OPL value of the process connection. If you want to use the entire sensor range, select a process connection with a higher OPL value (1.5 x PN; PN = MWP).
- In oxygen applications, the values for p_{\max} and T_{\max} for oxygen applications" as per → 28, "Oxygen applications" may not be exceeded.
- Avoid steam hammering! Steam hammering can cause zero point drift.
Recommendation:
Residue (such as condensation or drops of water) can remain at the process isolating diaphragm after CIP cleaning and lead to local steam hammering if immediately steam is introduced. In practice, drying the process isolating diaphragm (e.g. by blowing off excess moisture) has proven to be a successful way of avoiding steam hammering.

1) With regard to their stability-temperature property, the materials 1.4435 and 1.4404 are grouped together under 13EO in EN 1092-1 Tab. 18. The chemical composition of the two materials can be identical.

2) The equation does not apply for PMP51 and PMP55 with a 40 bar (600 psi) - or a 100 bar (1500 psi) - measuring cell.

Mechanical construction

F31 aluminum housing dimensions

P01-F31xxxx-06-00-xx-xx-000

Prepared for diaphragm seal mount

P01-PMP71xxx-06-09-xx-xx-013

Version XSJ: prepared for diaphragm seal mount

- 1 Hole for fill fluid
- 2 Bearing
- 3 Setscrew with a hexagonal recess 4 mm (0.16 in)

	F31 housing	F15 housing
Height H	190 mm (7.48 in)	175 mm (6.89 in)

PMP55 basic device

P01-PMP75xxx-06-09-xx-xx-012

PMP55 basic device with diaphragm seal

- 1 PMP55 basic device
- 2 Diaphragm seal, here e.g. flange diaphragm seal
- 3 Diaphragm seal with temperature isolator
- 4 Process connections with capillary tubes are 40 mm (1,57 in) higher than process connections without capillary tubes

	F31 housing	F15 housing
Height H	190 mm (7.48 in)	175 mm (6.89 in)

Note!

- The weights of the diaphragm seals are given in the following tables. See → 66 for the weight of the housing.
- The following drawings are schematic diagrams. In other words, the dimensions of a diaphragm seal supplied may deviate from the dimensions given in this document.
- When using high-temperature oils the design can deviate significantly.
- Observe the information in the "Planning instructions for diaphragm seal systems" section → 76 ff.
- For further information please contact your local Endress+Hauser Sales Center.

Process connections PMP55 (with diaphragm seal)

Diaphragm seal cell structure (Pancake)

7	PE cable for separate housing	Abrasion-proof cable with strain-relief Dynema members; shielded using aluminum-coated film; insulated with polyethylene (PE-LD), black; copper wires, twisted, UV-resistant
8	FEP cable for separate housing	Abrasion-proof cable; shielded using galvanized steel wire netting; insulated with fluorinated ethylene propylene (FEP), black; copper wires, twisted, UV-resistant
9	Process connection adapter for separate housing	AISI 316L (1.4404)

Filling oil

See "Ordering information" (→ 82)

Miscellaneous:

- Diaphragm seal capillary: AISI 316 Ti (1.4571)
- Protective hose for diaphragm seal capillary: AISI 304 (1.4301)

Material (wetted)

Note!

The wetted device components are listed in the "Mechanical construction" (→ 33 ff) and "Ordering information" (→ 82 ff) sections.

TSE Certificate of Suitability (Transmissible Spongiform Encephalopathy)

The following applies to all process wetted device components:

- They do not contain any materials derived from animals.
- No auxiliaries or operating materials derived from animals are used in production or processing.

Process connections

- "Clamp connections" and "Hygienic process connections" (see also "Ordering information" section):
AISI 316L (DIN/EN material number 1.4435)
- Endress+Hauser supplies process connections with threaded connections and DIN/ EN flanges made of stainless steel as per AISI 316L (DIN/EN material number 1.4404 (AISI 316) or 1.4435). With regard to their stability-temperature property, the materials 1.4404 and 1.4435 are grouped together under 13E0 in EN 1092-1 Tab.18. The chemical composition of the two materials can be identical.
- Some process connections are also available in the material Alloy C276 (DIN/EN material number 2.4819). See the information in the "Mechanical construction" section.

Process isolating diaphragm

- PMC51: Al₂O₃ aluminum-oxide ceramic, Ceraphire® (FDA 21 CFR 186.1256, USP Class VI), ultrapure 99.9 % (→ see also www.endress.com/ceraphire)
- PMP51:
 - AISI 316L (DIN/EN material number 1.4435)
 - AISI 316L with gold-rhodium coating
 - Alloy C276 (DIN/EN material number 2.4819)
- PMP55:
 - AISI 316L (DIN/EN material number 1.4435)
 - AISI 316L with gold-rhodium coating
 - AISI 316L with 0.09 mm PTFE foil (not for vacuum applications)
 - AISI 316L with 0.25 mm PTFE foil (not for vacuum applications)
 - Alloy C276 (DIN/EN material number 2.4819)
 - Monel
 - Tantalum

Seals

Human interface

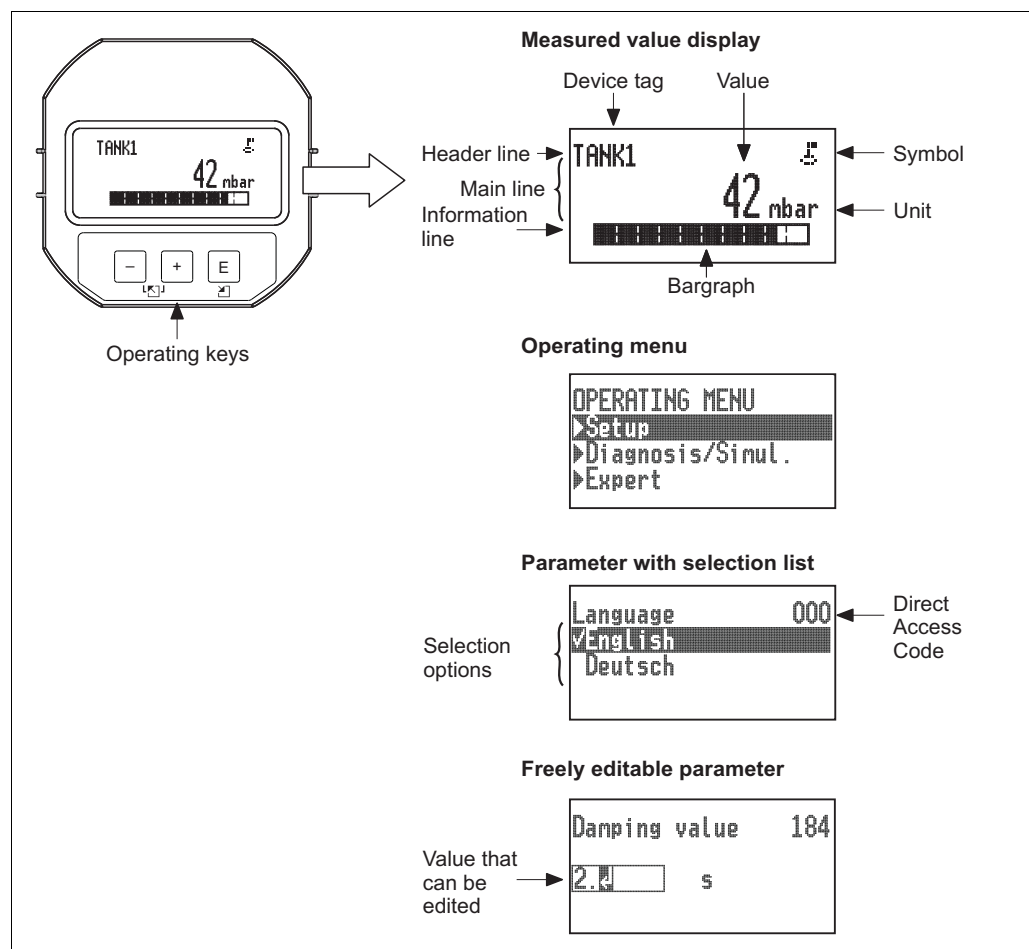

Operating elements

Local display (optional) for devices with HART, PROFIBUS PA or FOUNDATION Fieldbus electronics

A 4-line liquid crystal display (LCD) is used for display and operation. The local display shows measured values, dialog texts as well as fault and notice messages in plain text, thereby supporting the user at every stage of operation. The liquid crystal display of the device can be turned in 90° stages. Depending on the orientation of the device, this makes it easy to operate the device and read the measured values.

Functions:

- 8-digit measured value display including sign and decimal point, bar graph for 4 to 20 mA HART as current display; or for PROFIBUS PA as graphic display of the standardized value of the AI Block; for FOUNDATION Fieldbus as graphic display of the transducer output in relation to the set pressure range.
- Three keys for operation
- Simple and complete menu guidance as parameters are split into several levels and groups
- Each parameter is given a 3-digit ID number for easy navigation
- Possibility of configuring the display to suit individual requirements and preferences, such as language, alternating display, contrast setting, display of other measured values such as sensor temperature etc.
- Comprehensive diagnostic functions (fault and warning message etc.)

P01-Mxxxxxxx-07-zz-zz-en-002

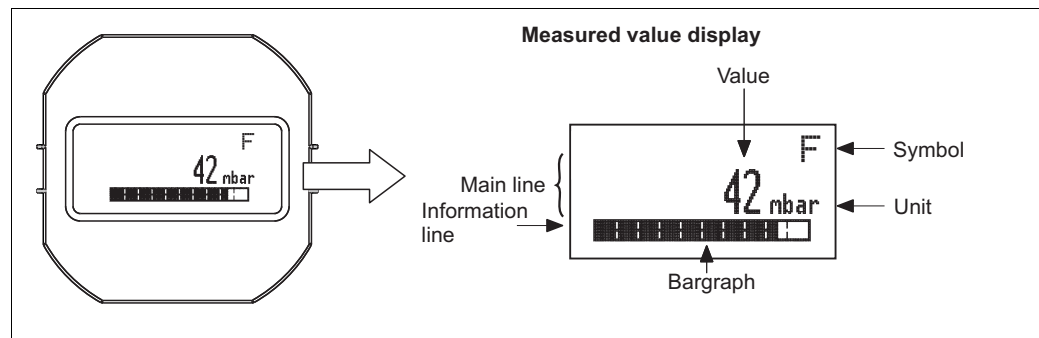

Local display (optional) for devices with analog electronics

A 4-line liquid crystal display (LCD) is used. The local display shows measured values, fault messages and notice messages. The liquid crystal display of the device can be turned in 90° stages.

Depending on the orientation of the device, this makes it easy to operate the device and read the measured values.

Functions:

- 8-digit measured value display including sign and decimal point, bar graph for 4 to 20 mA as current display.
- Diagnostic functions (fault and warning message etc.)

P01-M0000000-07-xx-xx-en-002

Operating keys and elements located on the electronic insert

P01-M0000000-19-xx-xx-xx-001

HART electronic insert

- 1 DIP switch for locking/unlocking parameters relevant to the measured value
- 2 DIP switch for switching damping on/off
- 3 DIP switch for alarm current SW / Alarm Min (3.6 mA)
- 4 DIP switch only for Deltabar M
- 5 Slot for optional local display
- 6 Green LED to indicate successful operation
- 7 Operating keys for lower range value (zero), upper range value (span), position zero adjustment or reset

P01-M0000000-19-xx-xx-xx-010

Analog electronic insert

- 1 Operating keys for lower range value (zero), upper range value (span), position zero adjustment or reset
- 2 Green LED to indicate successful operation
- 3 Slot for optional local display
- 4 DIP switch for switching damping on/off

P01-Mxxxxxxx-19-xx-xx-xx-013

PROFIBUS PA electronic insert

- 1 DIP switch for locking/unlocking parameters relevant to the measured value
- 2 DIP switch for switching damping on/off
- 3/4/5 Not used
- 6 DIP-switch for hardware address
- 7 DIP-switch for bus address SW / HW
- 8 Slot for optional local display
- 9 Operating key for position zero adjustment (Zero) or reset
- 10 Green LED to indicate successful operation

P01-Mxxxxxxx-19-xx-xx-xx-014

FOUNDATION Fieldbus electronic insert

- 1 DIP switch for locking/unlocking parameters relevant to the measured value
- 2 DIP switch for switching damping on/off
- 3 DIP-switch for simulation mode
- 4/5 Not used
- 6 Slot for optional local display
- 7 Green LED to indicate successful operation
- 8 Operating key for position zero adjustment (Zero) or reset

Onsite operation

Function	Operation without display with operating keys and DIP-switches on the electronic insert			
	Analog electronics	HART	PROFIBUS PA	FOUNDATION Fieldbus
Position adjustment (zero point correction)	X	X	X	X

	Analog electronics	HART	PROFIBUS PA	FOUNDATION Fieldbus
Position adjustment (zero point correction)	—	X	X	X
Setting lower range value and upper range value - reference pressure present at the device	—	X	X	X
Device reset	—	X	X	X
Locking and unlocking parameters relevant to the measured value	—	X	X	X
Value acceptance indicated by the green LED	—	—	—	—
Switching damping on and off	—	X	X	X

Remote operation

All software parameters are accessible depending on the position of the write protection switch on the device.

HART

Remote operation via:

- FieldCare (see "Hardware and software for onsite and remote operation" section → 75 ff) with Commubox FXA195 (see "Hardware and software for onsite and remote operation" section → 75 ff)
- Field Xpert SFX100. Field Xpert is an industrial PDA with integrated 3.5" touchscreen from Endress+Hauser based on Windows Mobile. It communicates via wireless with the optional VIATOR Bluetooth modem connected to a HART device point-to-point or wireless via WiFi and Endress+Hauser's Fieldgate FXA520. Field Xpert also works as a stand-alone device for asset management applications. For details refer to BA00060S/00/EN.

PROFIBUS PA

Remote operation via:

- FieldCare (see "Hardware and software for onsite and remote operation" section → 75 ff)
 - Profiboard: For connecting a PC to PROFIBUS
 - Proficard: For connecting a laptop to PROFIBUS

FOUNDATION Fieldbus

Remote operation via:

- FieldCare (see "Hardware and software for onsite and remote operation" → 75 ff)
 - NI PCMCIA-FBUS series 2 to connect a laptop to FF.
- Use an FF-configuration program for example NI-FBUS Configurator, to
 - connect devices with "FOUNDATION Fieldbus signal" into an FF-network
 - set FF-specific parameters

Operation with NI-FBUS Configurator:

The NI-FBUS Configurator is an easy-to-use graphical environment for creating linkages, loops, and a schedule based on the fieldbus concepts.

You can use the NI-FBUS Configurator to configure a fieldbus network as follows:

- Set block and device tags
- Set device addresses
- Create and edit function block control strategies (function block applications)
- Configure vendor-defined function and transducer blocks
- Create and edit schedules
- Read and write to function block control strategies (function block applications)
- Invoke Device Description (DD) methods
- Display DD menus
- Download a configuration
- Verify a configuration and compare it to a saved configuration
- Monitor a downloaded configuration
- Replace a virtual device by a real device
- Save and print a configuration

Note!

For further information please contact your local Endress+Hauser Sales Center.

**Hardware and software for
onsite and remote operation**

Commubox FXA195

For intrinsically safe HART communication with FieldCare via the USB interface. For details refer to TI00404F/00/EN.

Field Xpert SFX100

Compact, flexible and robust industry handheld terminal for remote parametrization and measured value inspection via the HART current output (4-20mA).

For details refer to Operating Instructions BA00060S/04/EN.

FieldCare

FieldCare is an Endress+Hauser asset management tool based on FDT technology. With FieldCare, you can configure all Endress+Hauser devices as well as devices from other manufacturers that support the FDT standard.

FieldCare supports the following functions:

- Configuration of transmitters in offline and online mode
- Loading and saving device data (upload/download)
- Documentation of the measuring point

Connection options:

- HART via Commubox FXA195 and the USB port on a computer
- PROFIBUS PA via segment coupler and PROFIBUS interface card
- FOUNDATION Fieldbus via NI interface card

For further information → www.endress.com

Planning instructions for diaphragm seal systems

Note!

The performance and the permitted applications for a diaphragm seal system depend on the process isolating diaphragm used, the filling oil, the coupling, the design and the process and ambient conditions at the place of operation.

To help you select suitable diaphragm seal systems for your individual application,

Endress+Hauser provides a free "Applicator Sizing Diaphragm Seal" selection tool. This tool is available online at "www.endress.com/applicator", or is available offline on a CD.

Applicator Sizing Diaphragm Seal PMP55-en

For further details, or for information on an optimum diaphragm seal solution, please contact your local Endress+Hauser Sales Center.

Applications

Diaphragm seal systems should be used if the process and the device need to be separated. Diaphragm seal systems offer clear advantages in the following instances:

- In the case of extreme process temperatures
- For aggressive media
- If extreme measuring point cleaning is necessary, or in the event of very damp mounting locations
- If the measuring point is exposed to severe vibrations
- For mounting locations that are difficult to access

Function and design

Diaphragm seals separate the measuring system from the process.

A diaphragm seal system consists of:

- A diaphragm seal
- A capillary tube or a temperature isolator if necessary
- Fill fluid
- A pressure transmitter

The process pressure acts via the process isolating diaphragm of a diaphragm seal on the liquid-filled system, which transfers the process pressure to the sensor of the pressure transmitter.

Endress+Hauser delivers all diaphragm seal systems as welded versions. The system is hermetically sealed, which ensures greater reliability.

The diaphragm seal determines the application range of the system on the basis of

- The diameter of the process isolating diaphragm
- The process isolating diaphragm: stiffness and material
- The design (oil volume)

Diameter of the process isolating diaphragm

The greater the diameter of the process isolating diaphragm (less stiff), the smaller the temperature effect on the measurement result.

Stiffness of the process isolating diaphragm

The stiffness depends on the diameter of the process isolating diaphragm, the material, any existing coating, the thickness of the process isolating diaphragm and the shape. The thickness of the process isolating diaphragm and the shape are determined by the design. The stiffness of a process isolating diaphragm of a diaphragm seal influences the temperature application range and the measuring error caused by temperature effects.

Capillary

Capillaries with an internal diameter of 1 mm (0.04 in) are used as standard.

As a result of its length and internal diameter, the capillary tube influences the thermal change, the ambient temperature application range and the response time of a diaphragm seal system.

Filling oil

When selecting the filling oil, the medium temperature and ambient temperature, as well as the process pressure, are of crucial importance. Observe the temperatures and pressures during commissioning and cleaning. A further selection criterion is the compatibility of the filling oil with the requirements of the medium. For example, only filling oils that do not present a health hazard are used in the food industry, e.g. vegetable oil or silicone oil. → See also the following section "Diaphragm seal filling oils".

The filling oil used influences the thermal change, the temperature application range of a diaphragm seal system and the response time. A temperature change results in a volume change in the filling oil. The volume change depends on the thermal expansion coefficient of the filling oil and on the volume of the fill fluid at calibration temperature (constant in the range: +21 to +33°C (+70 to 91°F)).

For example, the filling oil expands in the event of a temperature increase. The additional volume presses against the process isolating diaphragm of a diaphragm seal. The stiffer a process isolating diaphragm is, the greater its return force, which counteracts a volume change and acts together with the process pressure on the measuring cell, thus shifting the zero point.

Pressure transmitter

The pressure transmitter influences the temperature application range, the thermal change and the response time as a result of its volume change. The volume change is the volume that has to be shifted in order to pass through the complete measuring range.

Pressure transmitters from Endress+Hauser are optimized with regard to minimum volume change.

Diaphragm seal filling oils

Version ¹⁾	Filling oil	Permissible temperature range ²⁾ at 0.05 bar (0.725 psi) ≤ p _{abs} ≤ 1 bar (14.5 psi)	Permissible temperature range ²⁾ at p _{abs} ≥ 1 bar (14.5 psi)	Density [g/cm ³] / [SGU]	Viscosity [mm ² /s] / [cSt] at 25°C (77°F)	Thermal expansion coefficient ³⁾ [1/K]	Note
1	Silicone oil	−40 to +180°C (−40 to +356°F)	−40 to +250°C (−40 to +482°F)	0.96	100	0.00096	Suitable for foods FDA 21 CFR 175.105
2	Inert oil	−40 to +80°C (−40 to +176°F)	−40 to +175°C (−40 to +347°F)	1.87	27	0.000876	For ultrapure gas and oxygen applications
4	Vegetable oil	−10 to +120°C (+14 to +248°F)	−10 to +200°C (+14 to +392°F)	0.94	9.5	0.00101	Suitable for foods FDA 21 CFR 172.856
5	High-temperature oil ⁴⁾	−10 to +200°C (+14 to +392°F)	−10 to +400°C (+14 to +752°F)	1.07	37	0.0007	High temperatures
6	Low-temperature oil	−70 to +80°C (−94 to +176°F)	−70 to +180°C (−94 to +356°F)	0.92	4.4	0.00108	Low temperatures

1) Version for feature 180 in the order code (→ 92 ff)

2) Observe temperature limits of the device (→ 31) and of the system (→ 76).

3) Please refer to the "Applicator Sizing Diaphragm Seal" tool for the thermal change of the diaphragm seal and other important technical features.

4) When simultaneously applying the diaphragms seal at high process temperatures and low absolute pressures, Endress+Hauser recommends the vacuum service (Feature 570 "Service" version "HG").

Operating temperature range	<p>The operating temperature range of a diaphragm seal system depends on the fill fluid, capillary length and internal diameter, process temperature and oil volume of the diaphragm seal.</p> <p>The range of application can be extended by using a fill fluid with a smaller expansion coefficient and a shorter capillary.</p>
------------------------------------	--

Installation instructions

Diaphragm seal systems

- Endress+Hauser offer flushing rings as accessory to clean process isolating diaphragms without taking the transmitters out of process.
For further information please contact your local Endress+Hauser Sales Center.
- A diaphragm seal together with the transmitter form a closed, calibrated system, which is filled through openings in the diaphragm seal and in the transmitter's measurement system. These openings are sealed and must not be opened.
- In the case of devices with diaphragm seals and capillaries, the zero point shift caused by the hydrostatic pressure of the filling liquid column in the capillaries must be taken into account when selecting the measuring cell. If a measuring cell with a small measuring range is selected, a position adjustment can cause range violation.
- For devices with a temperature isolator or capillary, a suitable fastening device (mounting bracket) is recommended.
- When using diaphragm seal systems with a capillary, sufficient strain relief must be ensured in order to prevent the capillary bending down (bending radius ≥ 100 mm (3.94 in)).

Capillary

In order to obtain more precise measurement results and to avoid a defect in the device, mount the capillaries as follows:

- Vibration-free (in order to avoid additional pressure fluctuations)
- Not in the vicinity of heating or cooling lines
- Insulate if the ambient temperature is below or above the reference temperature
- With a bending radius of ≥ 100 mm (3.94 in).

Vacuum applications

For applications under vacuum, Endress+Hauser recommends mounting the pressure transmitter below the diaphragm seal. This prevents vacuum loading of the diaphragm seal caused by the presence of fill fluid in the capillary.

When the pressure transmitter is mounted above the diaphragm seal, the maximum height difference H1 in accordance with the illustration below must not be exceeded. The maximum height difference depends on the density of the filling oil and the smallest ever pressure that is permitted to occur at the diaphragm seal (empty container), see illustration below right.

When simultaneously applying the diaphragm seal systems at high process temperatures and low absolute pressures, Endress+Hauser recommends the vacuum service (Feature 570 "Service" version "HG").

Thermal insulation

The PMP55 may only be insulated up to a certain height. The maximum permitted insulation height is indicated on the devices and applies to an insulation material with a heat conductivity $\leq 0.04 \text{ W}/(\text{m} \times \text{K})$ and to the maximum permitted ambient and process temperature. The data were determined under the most critical application "quiescent air".

Maximum permitted insulation height, here indicated on a PMP55 with a flange

Mounting with temperature isolator

Endress+Hauser recommends the use of temperature isolators in the event of constant extreme medium temperatures which lead to the maximum permissible electronics temperature of $+85^{\circ}\text{C}$ ($+185^{\circ}\text{F}$) being exceeded.

Depending on the filling oil used, diaphragm seal systems with temperature isolators can be used for maximum temperatures of up to 260°C ($+500^{\circ}\text{F}$). → For the temperature application limits, see → 77, "Diaphragm seal filling oils" section.

To minimize the influence of rising heat, Endress+Hauser recommends the device be mounted horizontally or with the housing pointing downwards.

The additional installation height also brings about a maximum zero point shift of 21 mbar (0.315 psi) due to the hydrostatic column in the temperature isolator. You can correct this zero point shift at the device.

PMP55 with temperature isolator

Certificates and approvals

CE mark	<p>The device meets the legal requirements of the relevant EC directives. Endress+Hauser confirms that the device has been successfully tested by applying the CE mark.</p>	
Ex approvals	<ul style="list-style-type: none"> ■ ATEX ■ IECEX ■ FM ■ CSA ■ Also combinations of different approvals <p>All explosion protection data are given in separate documentation which is available upon request. Standards and guidelines

DIN EN 60770 (IEC 60770):
 Transmitters for use in industrial process control systems
 Part 1: Methods for inspection and routine testing

DIN 16086:
 Electrical pressure measuring instruments, pressure sensors, pressure transmitters, pressure measuring instruments, concepts, specifications on data sheets

EN 61326 series:
 EMC product family standard for electrical equipment for measurement, control and laboratory use.

North-American practice for installation of process seals

Endress+Hauser instruments are designed according to ANSI/ISA 12.27.01 either as single seal or dual seal devices with annunciation, allowing the user to waive the use and save the cost of installing external secondary process seals in the conduit as required by the process sealing sections of ANSI/NFPA 70 (NEC) and CSA 22.1 (CEC). These instruments comply with the North-American installation practice and provide a very safe and cost-saving installation for pressurized applications with hazardous fluids.
 Further information can be found in the control drawings of the relevant devices.

YYY	Special version
170	Material of the process isolating diaphragm:
A	316L
B	AlloyC
M	Rhodium>gold>316L
Y	Special version

180	Fill fluid:	
	1	Silicone oil
	2	Inert oil
	3	Synthetic oil, FDA
	9	Special version

Additional ordering information (optional)

500	Additional Operating language:	
	AA	English
	AB	German
	AC	French
	AD	Spanish
	AE	Italian
	AF	Dutch
	AK	Chinese simplified
	AL	Japanese

PMP51 (continued)

550	Calibration:	
	F1	Factory calibration certificate, 5-point
	F2	DKD/DakS calibration certificate 10-point

570	Service:	
	HA	Oil and grease removed ¹⁾
	HB	Cleaned for oxygen service ¹⁾
	HC	Cleaned from PWIS (PWIS = paint wetting impairment substances) ¹⁾
	IA	Configured min alarm current
	IB	Configured HART Burst Mode PV
	I9	Special version
	1) Only device, not accessory or enclosed accessory	

580	Test, certificate:	
	JA	EN10204-3.1 wetted material, inspection certificate
	JB	NACE MR0175 wetted
	JF	EN10204-3.1 AD2000 material wetted parts, excepting process membrane inspection certificate
	KB	EN10204-3.1 wetted material + Ra, Ra= surface roughness, dimensional check, inspection certificate
	KD	EN10204-3.1 helium leak test, inspection certificate
	KE	EN10204-3.1 pressure test, inspection certificate
	KG	EN10204-3.1 PMI test* (PMI = positive material identification), inspection certificate
	* Meter body and process isolating diaphragm not included.	
	K9	Special version

590	Other approvals:	
	LW	CoC-ASME BPE (CoC = Certificate of Compliance)
	LI	DNV marine certificate
	LE	GL marine certificate
	LA	SIL
	LR	NSF potable water approval

600	Separate housing:	
	MA	Cable PE, 2m/80in + housing mounting bracket, wall/pipe, 304
	MB	Cable PE, 5m/200in + housing mounting bracket, wall/pipe, 304
	MC	Cable PE, 10m/400in + housing mounting bracket, wall/pipe, 304
	MH	Cable FEP, 5m/200in IP69K + housing mounting bracket, wall/pipe, 304

610	Accessory mounted:	
	NA	Overvoltage protection

620	Accessory enclosed	
	PA	Mounting bracket, wall/pipe, 304
	P2	Shutoff valve (PZAV), see additional spec
	-R1A1	PZAV-R1A1 Shutoff valve, G1/2, C22.8 (O-shape)
	-R1A2	PZAV-R1A2 Shutoff valve, G1/2, 316Ti (O-shape)
	-R1D1	PZAV-R1D1 Shutoff valve, NPT1/2, C22.8 (U-shape)
	-R1D2	PZAV-R1D2 Shutoff valve, NPT1/2, 316Ti (U-shape)
	-B1A2	PZAV-B1A2 Shutoff valve, G1/2, 316Ti, 3.1 (O-shape)
	-B1D2	PZAV-B1D2 Shutoff valve, NPT1/2, 316Ti, 3.1 (O-shape)
	P4	Siphon (PZW), see additional spec
	-RA21	PZW-RA21 Siphon G1/2 vertical, C22.8
	-RA22	PZW-RA22 Siphon G1/2 vertical, 316Ti
	-RC11	PZW-RC11 Siphon G1/2 x weld. horiz. C22.8

620	Accessory enclosed	
	-RD11	PZW-RD11 Siphon NPT1/2 x weld. horiz. C22.8
	-BB22	PZW-BB22 Siphon NPT1/2 vertical, 316Ti, 3.1
	-BA22	PZW-BA22 Siphon NPT1/2x weld.vert.316Ti 3.1
	QA	Welding neck G1/2, 316L,
	QB	Welding neck G1/2, 316L, 3.1, EN10204-3.1 material, inspection certificate
	QC	Weld-in tool adapter G1/2, brass
	QG	Weld-in tool adapter G1, brass, metallic sealing taper
	QJ	Welding neck G1-1/2, 316L
	QK	Welding neck G1-1/2, 316L, 3.1, EN10204-3.1 material, inspection certificate
	QL	Weld-in tool adapter G1-1/2, brass
	RL	Plug-in jack M12
	RM	Plug-in jack M12, 90deg
	RN	Plug-in jack M12, 90deg+5m cable
850	Firmware version:	
	78	01.00.zz, HART, DevRev01
895	Identification:	
	Z1	Measuring point (TAG), see additional spec.
	Z2	Bus address, see additional spec.

M	Rhodium>gold>316L
R	0.09mm PTFE>316L, not for vacuum
S	0.25mm PTFE>316L, not for vacuum
Y	Special version

PMP55 (continued)

180	Fill fluid:
1	Silicone oil
2	Inert oil
4	Vegetable oil, FDA
5	High-temperature oil
6	Low-temperature oil
9	Special version

200	Diaphragm seal connection:
A	Direct
B	Temperature isolator
D m capillary
E ft capillary
Y	Special version

Additional ordering information (optional)

500	Additional Operating language:
AA	English
AB	German
AC	French
AD	Spanish
AE	Italian
AF	Dutch
AK	Chinese simplified
AL	Japanese

550	Calibration:
F1	Factory calibration certificate, 5-point
F2	DKD/DakS calibration certificate 10-point

570	Service:
HA	Oil and grease removed ¹⁾
HB	Cleaned for oxygen service ¹⁾
HC	Cleaned from PWIS (PWIS = paint wetting impairment substances) ¹⁾
HG	Diaphragm seal vacuum service
HK	Surface quality Ra<0.38um electropolished (wetted)
IA	Configured min alarm current
IB	Configured HART Burst Mode PV
I9	Special version
	1) Only device, not accessory or enclosed accessory

580	Test, certificate:
JA	EN10204-3.1 wetted material, inspection certificate
JB	NACE MR0175 wetted
JF	EN10204-3.1 AD2000 material wetted parts, excepting process membrane inspection certificate
KB	EN10204-3.1 wetted material + Ra, (Ra= surface roughness), dimensional check, inspection certificate
KD	EN10204-3.1 helium leak test, inspection certificate
KE	EN10204-3.1 pressure test, inspection certificate
KF	EN10204-3.1 measurement Delta ferrite content, inspection certificate
KG	EN10204-3.1 PMI test* (PMI = positive material identification), inspection certificate
	* Meter body and process isolating diaphragm not included.
K9	Special version

590	Other approvals:
LW	CoC-ASME BPE (CoC = Certificate of Compliance)
LI	DNV marine certificate
LE	GL marine certificate
LA	SIL

600	Separate housing:
MA	Cable PE, 2m/80in + housing mounting bracket, wall/pipe, 304
MB	Cable PE, 5m/200in + housing mounting bracket, wall/pipe, 304
MC	Cable PE, 10m/400in + housing mounting bracket, wall/pipe, 304
MH	Cable FEP, 5m/200in IP69K + housing mounting bracket, wall/pipe, 304

610	Accessory mounted:
NA	Overvoltage protection

PMP55 (continued)

620	Accessory enclosed	
PA	Mounting bracket, wall/pipe, 304	
P2	Shutoff valve (PZAV), see additional spec	
-R1A1	PZAV-R1A1	Shutoff valve, G1/2, C22.8 (O-shape)
-R1A2	PZAV-R1A2	Shutoff valve, G1/2, 316Ti (O-shape)
-R1D1	PZAV-R1D1	Shutoff valve, NPT1/2, C22.8 (U-shape)
-R1D2	PZAV-R1D2	Shutoff valve, NPT1/2, 316Ti (U-shape)
-B1A2	PZAV-B1A2	Shutoff valve, G1/2, 316Ti, 3.1 (O-shape)
-B1D2	PZAV-B1D2	Shutoff valve, NPT1/2, 316Ti, 3.1 (O-shape)
P4	Siphon (PZW), see additional spec	
-RA21	PZW-RA21	Siphon G1/2 vertical, C22.8
-RA22	PZW-RA22	Siphon G1/2 vertical, 316Ti
-RC11	PZW-RC11	Siphon G1/2 x weld. horiz. C22.8
-RD11	PZW-RD11	Siphon NPT1/2 x weld. horiz. C22.8
-BB22	PZW-BB22	Siphon NPT1/2 vertical, 316Ti, 3.1
-BA22	PZW-BA22	Siphon NPT1/2x weld.vert.316Ti 3.1
QA	Welding neck G1/2, 316L,	
QB	Welding neck G1/2, 316L, 3.1, EN10204-3.1 material, inspection certificate	
QC	Weld-in tool adapter G1/2, brass	
QJ	Welding neck G1-1/2, 316L	
QK	Welding neck G1-1/2, 316L, 3.1, EN10204-3.1 material, inspection certificate	
QL	Weld-in tool adapter G1-1/2, brass	
QP	Welding flange DRD DN50 65mm, 316L	
QR	Welding fl. DRD DN50 65mm, 316L 3.1, EN10204-3.1 material, inspection certificate	
QS	Weld-in tool flange DRD DN50 65mm, brass	
RL	Plug-in jack M12	
RM	Plug-in jack M12, 90deg	
RN	Plug-in jack M12, 90deg+5m cable	
850	Firmware version:	
78	01.00.zz, HART, DevRev01	
895	Identification:	
Z1	Measuring point (TAG), see additional spec.	
Z2	Bus address, see additional spec.	

Documentation

Technical Information

- EMC test procedures TI00241F/00/EN
- Deltabar M: TI00434P/00/EN
- Deltapilot M: TI00437P/00/EN

Operating Instructions

- 4 to 20 mA Analog: BA00385P/00/EN
- 4 to 20 mA HART: BA00382P/00/EN
- PROFIBUS PA: BA00383P/00/EN
- FOUNDATION Fieldbus: BA00384P/00/EN

Brief Operating Instructions

- 4 to 20 mA Analog: KA01036P/00/EN
- 4 to 20 mA HART: KA01030P/00/EN
- PROFIBUS PA: KA01031P/00/EN
- FOUNDATION Fieldbus: KA01032P/00/EN
