Proline Promag 55H

Electromagnetic Flow Measuring System

Flow measurement of liquids with solids content or inhomogeneous liquids in hygienic, food or process applications

Application

Electromagnetic flowmeter for bidirectional measurement of liquids with a minimum conductivity of $\geq 5 \mu\text{S}/\text{cm}$ – in particular fluids that are not homogeneous, fluids with entrained solids or fluids that tend to produce buildup, for example:

- Fruit mashes, fruit concentrates and final products (salad dressings, soups with vegetable pieces)
- Beverages, e.g. fruit juice, beer, wine
- Dairy products, fruit juice mixes
- Saline solutions
- Acid, alkalis etc.
- Chemically inhomogeneous fluids (e.g. additives)
- Flow measurement up to $600 \text{ m}^3/\text{h}$ (2650 gal/min)
- Fluid temperature up to $+150^\circ\text{C}$ ($+302^\circ\text{F}$)
- Process pressures up to 40 bar (580 psi)
- Fitting lengths as per DVGW/ISO
- CIP-/SIP cleaning
- Stainless steel housing

Approvals in food sector/hygiene sector:

- 3A approval, EHEDG-certified, conform to FDA, USP Class VI

Application-specific lining material:

- PFA

Approvals for hazardous area:

- ATEX, FM, CSA

Connection to process control system:

- HART, PROFIBUS DP/PA, FOUNDATION Fieldbus

Your benefits

Promag measuring devices offer you cost-effective flow measurement with a high degree of accuracy for a wide range of process conditions.

The uniform Proline transmitter concept comprises:

- Modular device and operating concept resulting in a high degree of efficiency
- Software options for: electrode cleaning, advanced diagnostics, calculation of mass flow and solids content
- Uniform operating concept

The tried-and-tested Promag sensors offer:

- Excellent accuracy and repeatability
- Optimum operational safety due to advanced, permanent self-diagnosis
- No pressure loss
- Not sensitive to vibrations
- Simple installation and commissioning

Function and system design

Measuring principle

Following *Faraday's law of magnetic induction*, a voltage is induced in a conductor moving through a magnetic field.

In the electromagnetic measuring principle, the flowing medium is the moving conductor.

The voltage induced is proportional to the flow velocity and is supplied to the amplifier by means of two measuring electrodes. The flow volume is calculated by means of the pipe cross-sectional area. The DC magnetic field is created through a switched direct current of alternating polarity.

$$U_e = B \cdot L \cdot v$$

$$Q = A \cdot v$$

U_e Induced voltage

B Magnetic induction (magnetic field)

v Flow velocity

Q Volume flow

A Pipe cross-section

I Current strength

Measuring system

The flow measuring system consists of the following components:

- Promag 55 transmitter
- Promag H sensor (DN 2 to 150 / 1/12 to 6")

Two versions are available:

- Compact version: Transmitter and sensor form a mechanical unit.
- Remote version: Sensor is mounted separate from the transmitter.

Measurement of solids flow rates

In combination with a density meter, e.g. with "Gammapiilot M" from Endress+Hauser, Promag 55H also determines the throughput of solids in mass, volume or percentage rates.

The following order specifications are required for this: order option for software function "Solids content flow" (F-CHIP) and order option for a current input.

Solids content flow measurement (m) with the aid of a density and flow measuring device. If the solid density (ρ_s) and the density of the carrier liquid (ρ_c) are also known, they can be used to calculate the solids flow.

- 1 Flow measuring device (Promag 55S) \rightarrow volume flow (V). The solid density (ρ_s) and the density of the transport liquid (ρ_c) must be entered in the transmitter.
- 2 Density measuring device (e.g. "Gammapiilot M") \rightarrow total fluid density ρ_M (transport liquid and solids)

Input

Measured variable Flow velocity (proportional to induced voltage)

Measuring ranges Measuring ranges for liquids
Typically $v = 0.01$ to 10 m/s (0.03 to 33 ft/s) with the specified accuracy

Operable flow range Over 1000 : 1

Input signal**Status input (auxiliary input)**

$U = 3$ to 30 V DC, $R_i = 5$ k Ω , galvanically isolated.

Configurable for: totalizer(s) reset, positive zero return, error-message reset

Status input (auxiliary input) with PROFIBUS DP

$U = 3$ to 30 V DC, $R_i = 3$ k Ω , galvanically isolated.

Switch level: ± 3 to ± 30 V DC, independent of polarity.

Configurable for: positive zero return, error message reset, zero point adjustment start

Current input

Active/passive selectable, galvanically isolated, full scale value adjustable, resolution: 3 μ A, temperature coefficient: typically 0.005% o.f.s./ $^{\circ}$ C (0.003% o.f.s./ $^{\circ}$ F)

- active: 4 to 20 mA, $R_i \leq 150$ Ω , $U_{out} = 24$ V DC, short-circuit proof
- passive: $0/4$ to 20 mA, $R_i \leq 150$ Ω , $U_{max} = 30$ V DC

Output

Output signal**Current output**

active/passive selectable, galvanically isolated, time constant selectable (0.01 to 100 s), full scale value adjustable, temperature coefficient: typically 0.005% o.f.s./ $^{\circ}$ C (0.003% o.f.s./ $^{\circ}$ F), resolution: 0.5 μ A

- active: $0/4$ to 20 mA, $R_L < 700$ Ω (for HART: $R_L \geq 250$ Ω)
- passive: 4 to 20 mA; supply voltage V_S : 18 to 30 V DC; $R_i \geq 150$ Ω

Pulse/frequency output

Active/passive selectable (Ex i version passive only), galvanically isolated

- active: 24 V DC, 25 mA (max. 250 mA during 20 ms), $R_L > 100$ Ω
- passive: open collector, 30 V DC, 250 mA
- Frequency output: end frequency 2 to 10000 Hz ($f_{max} = 12500$ Hz), on/off ratio $1:1$, pulse width max. 10 s
- Pulse output: pulse value and pulse polarity selectable, pulse width configurable (0.05 to 2000 ms)

PROFIBUS DP interface

- Transmission technology (Physical Layer): RS485 according to ANSI/TIA/EIA-485-A: 1998, galvanically isolated
- Profile Version 3.0
- Data transmission rate: 9.6 kBaud to 12 MBaud
- Automatic identification of data transmission rate
- Function blocks: $2 \times$ analog input, $3 \times$ totalizer
- Output data: volume flow, calculated mass flow, totalizer 1 to 3
- Input data: positive zero return (ON/OFF), totalizer control, value for local display
- Cyclic data transmission compatible with previous model Promag 35S
- Bus address adjustable via miniature switches or local display (optional) at the measuring device
- Available output combination \rightarrow  7

PROFIBUS PA interface

- Transmission technology (Physical Layer): IEC 61158-2 (MBP), galvanically isolated
- Profile version 3.0
- Current consumption: 11 mA
- Permissible supply voltage: 9 to 32 V
- Bus connection with integrated reverse polarity protection
- Error current FDE (Fault Disconnection Electronic): 0 mA
- Function blocks: 2 × analog input, 3 × totalizer
- Output data: volume flow, calculated mass flow, totalizer 1 to 3
- Input data: positive zero return (ON/OFF), totalizer control, value for local display
- Cyclic data transmission compatible with previous model Promag 35S
- Bus address adjustable via miniature switches or local display (optional) at the measuring device

FOUNDATION Fieldbus interface

- FOUNDATION Fieldbus H1
- Transmission technology (Physical Layer): IEC 61158-2 (MBP), galvanically isolated
- ITK version 5.01
- Current consumption: 12 mA
- Inrush current: < 12 mA
- Error current FDE (Fault Disconnection Electronic): 0 mA
- Permissible supply voltage: 9 to 32 V
- Bus connection with integrated reverse polarity protection
- Function blocks:
 - 5 × Analog Input (execution time: 18 ms each)
 - 1 × PID (25 ms)
 - 1 × Digital Output (18 ms)
 - 1 × Signal Characterizer (20 ms)
 - 1 × Input Selector (20 ms)
 - 1 × Arithmetic (20 ms)
 - 1 × Integrator (18 ms)
- Total VCRs: 48
- Total link objects in VFD: 40
- Output data: volume flow, calculated mass flow, totalizer 1 to 3
- Input data: positive zero return (ON/OFF), reset totalizer
- Link Master (LM) functionality is supported

Signal on alarm**Current output**

Failsafe mode selectable (e.g. according to NAMUR recommendation NE 43)

Pulse/frequency output

Failsafe mode selectable

Relay output

"de-energized" in the event of a fault or power supply failure

PROFIBUS DP/PA

Status and alarm messages in accordance with PROFIBUS Profile Version 3.0

Load

See "output signal"

Low flow cutoff

Switch points for low flow cutoff are selectable.

Galvanic isolation

All circuits for inputs, outputs and power supply are galvanically isolated from each other.

Switching output

Relay output:
Normally closed (NC or break) or normally open (NO or make) contacts available
(default: relay 1 = NO, relay 2 = NC), max. 30 V / 0.5 A AC; 60 V / 0.1 A DC, galvanically isolated.
Configurable for: error messages, empty pipe detection (EPD), direction of flow, limit values.

Power supply

Terminal assignment

Order version	Terminal No. (inputs / outputs)

Electrical connections

20 to 260 V AC, 45 to 65 Hz
20 to 64 V DC

Power consumption

AC: < 45 VA at 260 V AC; < 32 VA at 110 V AC (incl. sensor)
DC: < 19 W (including sensor)

Switch-on current:

- max. 2.5 A (< 200 ms) at 24 V DC
- max. 2.5 A (< 5 ms) at 110 V AC
- max. 5.5 A (< 5 ms) at 260 V AC

Power supply failure

Lasting min. 1 power cycle:

- EEPROM or HistoROM/T-DAT saves measuring system data if power supply fails
- HistoROM/S-DAT: exchangeable data storage device which stores sensor characteristic data (nominal diameter, serial number, calibration factor, zero point, etc.)

Not connected, insulated cable shields**Cable colors/numbers for terminals: 6/5 = brown; 7/8 = white; 4 = green; 36/37 = yellow, 41 = 1, 42 = 2***Potential equalization**

Perfect measurement is only ensured when the medium and the sensor have the same electrical potential.

Metal process connections

Potential matching usually takes place over the metallic process connection in contact with medium process connections which are directly mounted on the measuring transmitter. This usually means that additional potential matching measures are unnecessary.

Plastic process connections (DN 2 to 25)

If the process connections are made of a synthetic material, additional ground rings or process connections with an integrated ground electrode must be used to ensure the potential between the sensor and fluid is matched. No potential matching can affect the accuracy of the measurements or cause the destruction of the sensor through the electrochemical decomposition of the electrodes.

When using ground rings, note the following points:

- Depending on the option ordered, plastic washers may be installed at the process connections instead of ground rings. These plastic washers serve only as spacers and have no potential equalization function. In addition, they provide a sealing function at the interface between the sensor and process connection. For this reason, with process connections without ground rings, these plastic washers/seals must not be removed, or must always be installed.
- Ground rings can be ordered separately from Endress+Hauser as an accessory.
Also make sure that the ground rings are compatible with the electrode material. Otherwise the danger exists that the electrodes could be destroyed by electrochemical corrosion.
You can find material data on → [49](#).
- Ground rings, incl. seals, are mounted inside the process connection. This has no influence on the installation length. You can find the dimensions of ground rings on → [37](#).

Potential equalization via additional ground ring

A0003194

Operation in zones of severe electrical interference

The measuring device complies with the general safety requirements in accordance with EN 61010-1, the EMC requirements of IEC/EN 61326 and NAMUR recommendation NE 21.

Caution!

Grounding of the shield is by means of the ground terminals provided for the purpose inside the connection housing. Ensure that the stripped and twisted lengths of cable shield to the ground terminal are as short as possible.

Performance characteristics

Reference operating conditions

As per DIN EN 29104

- Medium temperature: $(+28 \pm 2) ^\circ\text{C}$ / $(+82 \pm 4) ^\circ\text{F}$
- Ambient temperature: $(+22 \pm 2) ^\circ\text{C}$ / $(+72 \pm 4) ^\circ\text{F}$
- Warm-up period: 30 minutes

Installation conditions

- Inlet run $> 10 \times \text{DN}$
- Outlet run $> 5 \times \text{DN}$
- Sensor and transmitter grounded.
- The sensor is centered in the pipe.

Maximum measured error

- Pulse output: standard $\pm 0.2\%$ o.r. $\pm 2 \text{ mm/s}$
- Current output: also typically $\pm 5 \mu\text{A}$

Note!

Fluctuations in the supply voltage do not have any effect within the specified range.

Max. measured error in % of reading

A0004456

Repeatability

Standard: max. $\pm 0.1\%$ o.r. $\pm 0.5 \text{ mm/s}$

Installation

Mounting location

Entrained air or gas bubble formation in the measuring tube can result in an increase in measuring errors.

Avoid the following installation locations in the pipe:

- Highest point of a pipeline. Risk of air accumulating!
- Directly upstream from a free pipe outlet in a vertical pipeline.

A0011899

Mounting location

Installation of pumps

Sensors may not be installed on the pump suction side. This precaution is to avoid low pressure and the consequent risk of damage to the lining of the measuring tube. Information on the pressure tightness of the measuring tube lining → 21, Section "Pressure tightness".

It might be necessary to install pulse dampers in systems incorporating reciprocating, diaphragm or peristaltic pumps. Information on the shock and vibration resistance of the measuring system → 19, Section "Shock and vibration resistance".

A0011900

Installation of pumps

Partially filled pipes

Partially filled pipes with gradients necessitate a drain-type configuration.

The empty pipe detection function (EPD) provides additional security in detecting empty or partially filled pipes.

**Caution!**

Risk of solids accumulating. Do not install the sensor at the lowest point in the drain. It is advisable to install a cleaning valve.

Installation with partially filled pipes

Down pipes

Install a siphon or a vent valve downstream of the sensor in down pipes $h \geq 5 \text{ m}$ (16.4 ft). This precaution is to avoid low pressure and the consequent risk of damage to the lining of the measuring tube. This measure also prevents the liquid current stopping in the pipe which could cause air locks. Information on the pressure tightness of the measuring tube lining → 21, Section "Pressure tightness".

Installation measures for vertical pipes

- 1 Vent valve
- 2 Pipe siphon
- h Length of the down pipe

Orientation

An optimum orientation position helps avoid gas and air accumulations and deposits in the measuring tube. The measuring device also offers the additional empty pipe detection function (EPD) for the detection of partially filled measuring tubes, e.g. in the case of degassing fluids or varying process pressures.

Vertical orientation

This is the ideal orientation for self-emptying piping systems and for use in conjunction with empty pipe detection.

A0011903

Vertical orientation

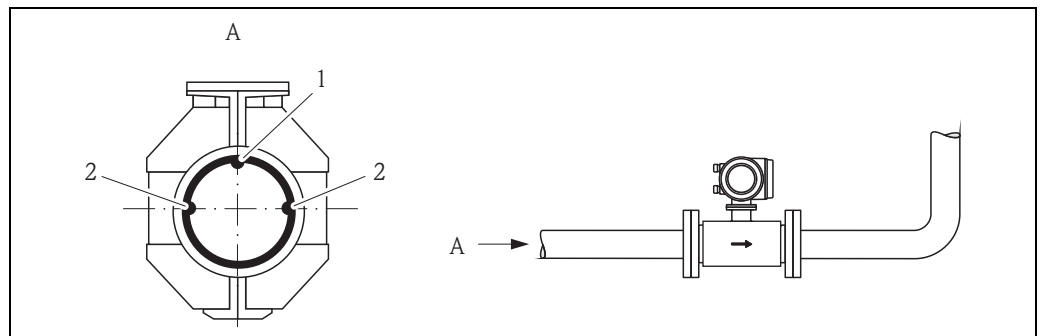

Horizontal orientation

The measuring electrode axis should be horizontal. This prevents brief insulation of the two measuring electrodes by entrained air bubbles.

Caution!

Empty pipe detection only works correctly with horizontal orientation if the transmitter housing is facing upwards. Otherwise there is no guarantee that empty pipe detection will respond if the measuring tube is only partially filled or empty.

A0012953

Horizontal orientation

- 1 EPD electrode for empty pipe detection (not for DN 2 to 15 / 1/12 to 1/2")
- 2 Measuring electrodes for signal detection

Inlet and outlet runs

If possible, install the sensor well clear of assemblies such as valves, T-pieces, elbows etc.

Note the following inlet and outlet runs to comply with measuring accuracy specifications:

- Inlet run: $\geq 5 \times \text{DN}$
- Outlet run: $\geq 2 \times \text{DN}$

Inlet and outlet runs

Adapters

Suitable adapters to DIN EN 545 (double-flange reducers) can be used to install the sensor in larger-diameter pipes. The resultant increase in the rate of flow improves measuring accuracy with very slow-moving fluids. The nomogram shown here can be used to calculate the pressure loss caused by reducers and expanders.

Note!

The nomogram only applies to liquids of viscosity similar to water.

1. Calculate the ratio of the diameters d/D .
2. From the nomogram read off the pressure loss as a function of flow velocity (downstream from the reduction) and the d/D ratio.

Pressure loss due to adapters

Length of connecting cable

When mounting the remote version, please note the following to achieve correct measuring results:

- Fix cable run or lay in armored conduit. Cable movements can falsify the measuring signal especially in the case of low fluid conductivities.
- Route the cable well clear of electrical machines and switching elements.
- If necessary, ensure potential equalization between sensor and transmitter.
- The permitted cable length L_{\max} is determined by the fluid conductivity. A minimum conductivity of 20 $\mu\text{S}/\text{cm}$ is required for measuring demineralized water.
- When the empty pipe detection function is switched on (EPD), the maximum connecting cable length is 10 m (33 ft).

A0010734

Permitted length of connecting cable for remote version

Area marked in gray = permitted range; L_{\max} = length of connecting cable in [m] ([ft]); fluid conductivity in $\mu\text{S}/\text{cm}$

Mounting wall-mount housing

Caution!

- Make sure that the ambient temperature does not exceed the permitted range.
- Always install the wall-mount housing in such a way that the cable entries point downwards.

Mounted directly on the wall

Pipe mounting

Panel mounting

Transmitter

- Standard:
 - Compact version: -20 to $+50$ °C (-4 to $+122$ °F)
 - Remote version: -20 to $+60$ °C (-4 to $+140$ °F)
- Optional:
 - Compact version: -40 to $+50$ °C (-40 to $+122$ °F)
 - Remote version: -40 to $+60$ °C (-40 to $+140$ °F)

Note!

At ambient temperatures below -20 °C (-4 °F), the readability of the display may be impaired.

Sensor

- -40 to $+60$ °C (-40 to $+140$ °F)

Caution!

Do not exceed the min. and max. temperatures for the lining of the measuring tube (→ "Medium temperature range").

Note the following points:

- Install the device at a shady location. Avoid direct sunlight, particularly in warm climatic regions.
- If both fluid and ambient temperatures are high, install the transmitter at a remote location from the sensor (→ "Medium temperature range").

Storage temperature

- The storage temperature corresponds to the operating temperature range of the measuring transmitter and the appropriate measuring sensors.
- The measuring device must be protected against direct sunlight during storage in order to avoid unacceptably high surface temperatures.
- A storage location must be selected where moisture does not collect in the measuring device. This will help prevent fungus and bacteria infestation which can damage the liner.
- If protecting caps or protective covers are mounted, these must not be removed before mounting the device.

Degree of protection

- Standard: IP 67 (NEMA 4X) for transmitter and sensor

Shock and vibration resistance

Acceleration up to 2 g following IEC 68-2-6

Interior cleaning

- CIP cleaning
- SIP cleaning

Electromagnetic compatibility (EMC)

- As per IEC/EN 61326 and NAMUR recommendation NE 21
- Emission: to limit value for industry EN 55011

Process

Medium temperature range

The permissible medium temperature depends on the sensor and the sealing material:

Sensor:

- DN 2 to 150 (1/12 to 6"): -20 to +150 °C (-4 to +302 °F)

Seals:

- EPDM: -20 to +150 °C (-4 to 302 °F)
- Viton (FKM): -20 to +150 °C (-4 to 302 °F)
- Silicone (VMQ): -20 to +150 °C (-4 to 302 °F)
- Kalrez: -20 to +150 °C (-4 to 302 °F)

Conductivity

The minimum conductivity is:

- $\geq 5 \mu\text{S/cm}$ for all fluids (incl. demineralized water)

Note!

In the remote version, the necessary minimum conductivity also depends on the cable length
(→ 17, Section "Length of connecting cable").

Medium pressure range (nominal pressure)

The permitted nominal pressure depends on the process connection, the seal and the nominal diameter:

Process connections DN 2 to 25 (1/12 to 1") with O-ring seal

Nominal diameter	[mm]	2	4	8	15	25
	[inch]	1/12"	1/8"	3/8"	1/2"	1"

Pressure tightness*Measuring tube lining: PFA*

Nominal diameter		Limit values for abs. pressure [mbar] ([psi]) at fluid temperatures:				
[mm]	[inch]	25 °C (77 °F)	80 °C (176 °F)	100 °C (212 °F)	130 °C (266 °F)	150 °C (302 °F)
2 to 150	1/12 to 6"	0	0	0	0	0

Limiting flow

The diameter of the pipe and the flow rate determine the nominal diameter of the sensor. The optimum flow velocity is between 2 to 3 m/s (6.5 to 9.8 ft/s). The velocity of flow (v), moreover, has to be matched to the physical properties of the fluid:

- $v < 2 \text{ m/s}$ (6.5 ft/s): for small conductivities
- $v > 2 \text{ m/s}$ (6.5 ft/s): for fluids causing build-up such as high-fat milk etc.

Pressure loss

- With nominal diameters from DN 8 (3/8") no pressure loss if the sensor is installed in a pipe with the same nominal diameter.
- Pressure losses for configurations incorporating adapters according to DIN EN 545 (→ 16, Section "Adapters").

Vibrations

Secure the piping and the sensor if vibration is severe.

Caution!

- If vibrations are too severe, we recommend the sensor and transmitter be mounted separately. Information on the permitted shock and vibration resistance → 19, Section "Shock and vibration resistance".
- The sensor might require support or additional attachments, depending on the application and the length of the piping run. When plastic process connections are used, the sensor must be additionally supported mechanically. A wall-mounting kit can be ordered separately from Endress+Hauser as an accessory.

Measuring tube specifications

Nominal diameter		Pressure rating ¹⁾	Internal diameter ²⁾	
[mm]	[inch]	EN (DIN)	PFA	
		[bar]	[mm]	[inch]
2	1/12"	PN 16 / PN 40	2.25	0.09
4	1/8"	PN 16 / PN 40	4.5	0.18
8	3/8"	PN 16 / PN 40	9.0	0.35
15	1/2"	PN 16 / PN 40	16.0	0.63
–	1"	PN 16 / PN 40	22.6	0.89
25	–	PN 16 / PN 40	26.0	1.02
40	1 1/2"	PN 16 / PN 25 / PN 40	35.3	1.39
50	2"	PN 16 / PN 25 / PN 40	48.1	1.89
65	–	PN 16 / PN 25 / PN 40	59.9	2.36
80	3"	PN 16 / PN 25 / PN 40	72.6	2.86
100	4"	PN 16 / PN 25 / PN 40	97.5	3.84
125	5"	PN 10 / PN 16	120.0	4.72
150	6"	PN 10 / PN 16	146.5	5.77

¹⁾ Pressure rating depends on the process connection and the seals used.

²⁾ Internal diameter of process connections.

Material

- Transmitter housing:
 - Compact housing: powder coated die-cast aluminium or stainless-steel field housing (1.4301/304)
 - Wall-mounted housing: powder coated die-cast aluminium
- Window material: glass or polycarbonate
- Sensor housing: stainless steel 1.4301/304
- Wall mounting kit (holder panel): 1.4301/304
- Measuring tube: stainless steel 1.4301/304
- Lining material: PFA (USP Class VI; FDA 21 CFR 177.1550; 3A)
- Flanges:
 - All connections 1.4404/316L
 - Flanges (EN (DIN), ANSI, JIS) made of PVDF
 - Adhesive fitting made of PVC
- Ground rings: 1.4435/316L (optional: Alloy C-22, Tantalum)
- Electrodes:
 - Standard: 1.4435/316L
 - Optional: Alloy C-22, Tantalum, Platinum (up to DN 25 / 1" only)
- Seals:
 - DN 2 to 25 (1/12 to 1"): O-Ring (EPDM, Viton, Kalrez), gasket seal (EPDM*, Viton, Silicone*)
 - DN 40 to 150 (1 1/2 to 6"): gasket seal (EPDM*, Silicone*)

* = USP Class VI; FDA 21 CFR 177.2600; 3A

A0017301

Welding nipple to ASME BPE

Material: 1.4404/316L

A0017302

Welding nipple to ISO 2037

Material: 1.4404 / 316L

A0017301

Clamp to ISO 2852, DIN 32676, L14 AM7

Material: 1.4404/316L

A0017314

Coupling to DIN 11864-1, ISO 2853

Material: 1.4404/316L

A0005596

For order codes with suffixes +CA/+CB:

A0017297

Flange connection to DIN 11864-2

Material: 1.4404/316L

For order codes with suffixes +CA/+CB:

Fitted electrodes	Measuring electrodes and empty pipe detection electrodes <ul style="list-style-type: none"> ■ Standard with: 1.4435/316L, Alloy C-22, Tantalum, Platinum ■ DN 2 to 15 (1/12 to 1/2"): without empty pipe detection electrode
--------------------------	--

Process connections	With O-ring: <ul style="list-style-type: none"> ■ Welding nipples (DIN EN ISO 1127, ODT/SMS) ■ Flange (EN (DIN), ANSI, JIS) ■ PVDF flange (EN (DIN), ANSI, JIS) ■ External pipe thread ■ Internal pipe thread ■ Hose connection ■ PVC adhesive fittings With gasket seals: <ul style="list-style-type: none"> ■ Welding nipples (DIN 11850, ODT/SMS, ASME BPE, ISO 2037) ■ Clamps (ISO 2852, DIN 32676, L14 AM7) ■ Coupling (DIN 11851, DIN 11864-1, ISO 2853, SMS 1145) ■ Flange (DIN 11864-2)
----------------------------	--

Surface roughness	(All data refer to parts in contact with medium) <ul style="list-style-type: none"> ■ Measuring tube lining with PFA: $\leq 0.4 \mu\text{m}$ (15 μin) ■ Electrodes: <ul style="list-style-type: none"> – 1.4435/316L, Alloy C-22, Tantalum, Platinum: ≤ 0.3 to $0.5 \mu\text{m}$ (12 to 20 μin) ■ Process connection made of stainless steel: $\leq 0.8 \mu\text{m}$ (31 μin)
--------------------------	---

Operability

Local operation	Display elements <ul style="list-style-type: none"> ■ Liquid-crystal display: illuminated, four lines with 16 characters per line ■ Custom configurations for presenting different measured values and status variables ■ 3 totalizers ■ At ambient temperatures below -20°C (-4°F), the readability of the display may be impaired.
------------------------	---

Operating elements

- Onsite operation with three optical sensor keys (//)
- Application-specific Quick Setup menus for straightforward commissioning

Language groups	Language groups available for operation in different countries: <ul style="list-style-type: none"> ■ Western Europe and America (WEA): English, German, Spanish, Italian, French, Dutch, Portuguese ■ Eastern Europe/Scandinavia (EES): English, Russian, Polish, Norwegian, Finnish, Swedish, Czech ■ South and East Asia (SEA): English, Japanese, Indonesian ■ China (CN): English, Chinese
------------------------	--

Note!
You can change the language group via the operating program "FieldCare".

Remote operation	Remote operation via HART, PROFIBUS DP/PA, FOUNDATION Fieldbus
-------------------------	--

Certificates and approvals

CE mark	The measuring system is in conformity with the statutory requirements of the EC Directives. Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.
C-tick symbol	The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".
Ex approval	Information about currently available Ex versions (ATEX, FM, CSA) can be supplied by your Endress +Hauser Sales Center on request. All explosion protection data are given in a separate documentation which is available upon request.
Sanitary compatibility	<ul style="list-style-type: none"> ■ 3A approval and EHEDG-certified ■ Seals → conform to FDA (apart from Kalrez seals)
Certification FOUNDATION Fieldbus	<p>The flow device has successfully passed all the test procedures carried out and is certified and registered by the Fieldbus Foundation. The device thus meets all the requirements of the following specifications:</p> <ul style="list-style-type: none"> ■ Certified to FOUNDATION Fieldbus Specification ■ The device meets all the specifications of the FOUNDATION Fieldbus H1. ■ Interoperability Test Kit (ITK), revision status 5.01 (device certification number: on request) ■ The device can also be operated with certified devices of other manufacturers ■ Physical Layer Conformance Test of the Fieldbus Foundation
Certification PROFIBUS DP/PA	<p>The flow device has successfully passed all the test procedures carried out and is certified and registered by the PNO (PROFIBUS User Organisation). The device thus meets all the requirements of the following specifications:</p> <ul style="list-style-type: none"> ■ Certified to PROFIBUS PA, profile version 3.0 (device certification number: on request) ■ The device can also be operated with certified devices of other manufacturers (interoperability)
Pressure equipment directive	<p>The measuring devices can be ordered with or without PED (Pressure Equipment Directive). If a device with PED is required, this must be ordered explicitly. For devices with nominal diameters less than or equal to DN 25 (1"), this is neither possible nor necessary.</p> <ul style="list-style-type: none"> ■ With the identification PED/G1/III on the sensor nameplate, Endress+Hauser confirms conformity with the "Basic safety requirements" of Appendix I of the Pressure Equipment Directive 97/23/EC. ■ Devices with this identification (with PED) are suitable for the following types of fluid: <ul style="list-style-type: none"> – Fluids of Group 1 and 2 with a steam pressure of greater than, or smaller and equal to 0.5 bar (7.3 psi) – Unstable gases ■ Devices without this identification (without PED) are designed and manufactured according to good engineering practice. They correspond to the requirements of Art. 3, Section 3 of the Pressure Equipment Directive 97/23/EC. Their application is illustrated in Diagrams 6 to 9 in Appendix II of the Pressure Equipment Directive 97/23/EC.

Other standards and guidelines

- EN 60529
Degrees of protection by housing (IP code)
- EN 61010
Safety requirements for electrical equipment for measurement, control and laboratory use.
- IEC/EN 61326
"Emission in accordance with requirements for Class A".
Electromagnetic compatibility (EMC requirements)
- NAMUR NE 21:
Electromagnetic compatibility (EMC) of industrial process and laboratory control equipment.
- NAMUR NE 43:
Standardization of the signal level for the breakdown information of digital transmitters with analog output signal.
- NAMUR NE 53:
Software of field devices and signal-processing devices with digital electronics.
- ANSI/ISA-S82.01
Safety Standard for Electrical and Electronic Test, Measuring, Controlling and related Equipment – General Requirements Pollution degree 2, Installation Category II.
- CAN/CSA-C22.2 No. 1010.1-92
Safety requirements for Electrical Equipment for Measurement and Control and Laboratory Use.
Pollution degree 2, Installation Category II

Ordering information

Detailed ordering information is available from the following sources:

- In the Product Configurator on the Endress+Hauser website: www.endress.com → Select country
→ Instruments → Select device → Product page function: Configure this product
- From your Endress+Hauser Sales Center: www.endress.com/worldwide

Product Configurator - the tool for individual product configuration:

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
Output format
- Ability to order directly in the Endress+Hauser Online Shop

Accessories

Various accessories, which can be ordered separately from Endress+Hauser, are available for the transmitter and the sensor. Your Endress+Hauser service organization can provide detailed information on the order codes in question.

Device-specific accessories

For the transmitter

Accessory	Description
Promag 55 transmitter	Transmitter for replacement or for stock. Use the order code to define the following specifications: <ul style="list-style-type: none"> – Approvals – Degree of protection / version – Cable type for the remote version – Cable entries – Display / power supply / operation – Software – Outputs / inputs
Software packages	Software add-ons on F-CHIP, can be ordered individually: <ul style="list-style-type: none"> – Electrode cleaning (ECC) – Advanced diagnostics – Solids content flow
Mounting kit	Mounting kit for wall-mounted housing (remote version). Suitable for: <ul style="list-style-type: none"> ■ Wall mounting ■ Pipe mounting ■ Panel mounting Mounting set for aluminum housings. Suitable for: <ul style="list-style-type: none"> ■ Pipe mounting
Cable for remote version	Coil and signal cables, various lengths. Reinforced cable on request.
Wall mounting kit	Wall mounting kit for Promag H transmitter.

For the sensor

Accessory	Description
Mounting kit	Mounting kit for Promag H, comprising: <ul style="list-style-type: none"> ■ 2 Process connections ■ Screws ■ Seals
Adapter connection	Adapter connections for installing Promag 55 H instead of Promag 30/33 A or Promag 30/33 H DN 25.
Ground rings:	If the process connections are made of PVC or PVDF, ground rings are necessary to ensure that potential is matched. A set comprises 2 ground rings.
Set of seals	For regular replacement of the seals of the Promag H sensor.
Welding jig	Weld nipples as process connection: Welding jig for installation in pipes.
Spacer	A spacer is required if a sensor of DN 80 to 100 is replaced in an existing installation and the new sensor is shorter.

Communication-specific accessories

Accessory	Description
HART handheld terminal Field Xpert SFX 100	Handheld terminal for remote configuration and for obtaining measured values via the HART current output (4 to 20 mA). Contact your Endress+Hauser representative for more information.
FXA195	The Commubox FXA195 connects intrinsically safe smart transmitters using the HART protocol to the USB port of a personal computer. This enables remote operation of the transmitter with operating software (e.g. FieldCare). Power is supplied to the Commubox via the USB port.

Service-specific accessories

Accessory	Description
Applicator	Software for selecting and configuring flowmeters. Applicator can be downloaded from the Internet or ordered on CD-ROM for installation on a local PC. Contact your Endress+Hauser representative for more information.
Fieldcheck	Tester/simulator for testing flowmeters in the field. When used in conjunction with the "FieldCare" software package, test results can be imported into a database, printed and used for official certification. Contact your Endress+Hauser representative for more information.
FieldCare	FieldCare is Endress+Hauser's FDT-based plant asset management tool. It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.
FXA193	The FXA193 service interface connects the device to the PC for operation via FieldCare.
Memograph M graphic display recorder	The Memograph M graphic display recorder provides information on all the relevant process variables: Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on a SD card or USB stick. The ReadWin® 2000 PC software is part of the standard package and is used for configuring, visualizing and archiving the data captured.
