# Technical Information **Proline Promag L 400**

Electromagnetic flowmeter

# The flowmeter with integrated web server and a weight-optimized sensor

# Application

- The electromagnetic measuring principle is unaffected by pressure, temperature and flow profile
- Fully suitable for standard applications in the water and wastewater industry

# Device properties

- Up to 30 % less sensor weight
- Nominal diameter: DN 50 to 2400 (2 to 90")
- Maximum reduced installation length to DVGW/ISO
- Transmitter housing made of durable polycarbonate
- Same housing concept for compact/remote version
- Integrated data logger: measured values monitoring

### Your benefits

- Reduced installation costs flexible mounting by one-of-akind lap-joint flange concept (DN < 350/14")</li>
- Energy-saving flow measurement no pressure loss due to cross-section constriction
- Maintenance-free no moving parts
- Safe operation no need to open the device due to display with touch control, background lighting
- Time-saving local operation without additional software and hardware – integrated web server
- Integrated verification Heartbeat Technology™

# Symbols used

# **Electrical symbols**

| Symbol   | Meaning   |
|----------|---|
| A0011197 | Direct current A terminal to which DC voltage is applied or through which direct current flows.   |
| A0011198 | Alternating current A terminal to which alternating voltage is applied or through which alternating current flows.  |
| A0017381 | Direct current and alternating current  ■ A terminal to which alternating voltage or DC voltage is applied.  ■ A terminal through which alternating current or direct current flows.  |
|          | Ground connection A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.   |
| A0011199 | Protective ground connection A terminal which must be connected to ground prior to establishing any other connections.  |
| A0011201 | <b>Equipotential connection</b> A connection that has to be connected to the plant grounding system: This may be a potential equalization line or a star grounding system depending on national or company codes of practice. |

# Function and system design

#### Measuring principle

Following *Faraday's law of magnetic induction*, a voltage is induced in a conductor moving through a magnetic field.

A001703

- Ue Induced voltage
- B Magnetic induction (magnetic field)
- L Electrode spacing
- I Current
- v Flow velocity

In the electromagnetic measuring principle, the flowing medium is the moving conductor. The voltage induced  $(U_e)$  is proportional to the flow velocity (v) and is supplied to the amplifier by means of two measuring electrodes. The flow volume (Q) is calculated via the pipe cross-section (A). The DC magnetic field is created through a switched direct current of alternating polarity.

# Formulae for calculation

- Induced voltage  $U_e = B \cdot L \cdot v$
- Volume flow  $Q = A \cdot v$

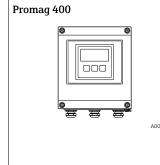

# Measuring system

The device consists of a transmitter and a sensor.

Two device versions are available:

- Compact version the transmitter and sensor form a mechanical unit.
- Remote version the transmitter and sensor are mounted separately from one another.

#### Transmitter

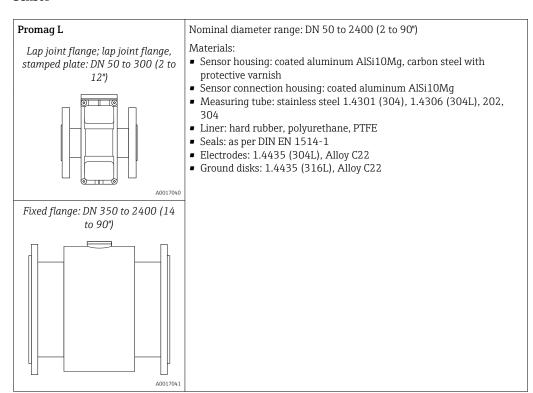

Device versions and materials

- Compact version: compact housing
  - Polycarbonate plastic
  - Coated aluminum AlSi10Mg
- Remote version: wall-mount housing
  - Polycarbonate plastic
  - Coated aluminum AlSi10Mg

#### Configuration:

- External operation via four-line, illuminated local display with touch control and guided menus ("Make-it-run" wizards) for applications
- Via operating tools (e.g. FieldCare)
- Via Web browser (e.g. Microsoft Internet Explorer)
- Also for device version with EtherNet/IP output:
  - Via Add-on Profile Level 3 for automation system from Rockwell Automation
  - Via Electronic Data Sheet (EDS)

#### Sensor

# Safety

# IT security

We only provide a warranty if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the device settings.

IT security measures in line with operators' security standards and designed to provide additional protection for the device and device data transfer must be implemented by the operators themselves.

Endress+Hauser can be contacted to provide support in performing this task.

# Input

# Measured variable

# Direct measured variables

- Volume flow (proportional to induced voltage)
- Electrical conductivity

# Calculated measured variables

Mass flow

# Measuring range

Typically v = 0.01 to 10 m/s (0.03 to 33 ft/s) with the specified accuracy

Electrical conductivity: 5 to 10 000  $\mu S/cm/cm$ 

Flow characteristic values in SI units

# Potential equalization

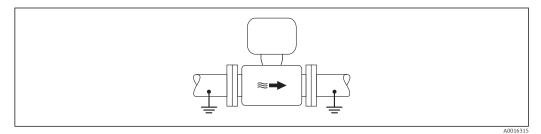

# Requirements

Please consider the following to ensure correct measurement:

- $\ \ \, \bullet \,$  Same electrical potential for the fluid and sensor
- Company-internal grounding concepts
- Pipe material and grounding

# Connection examples for standard situations

Metal, grounded pipe

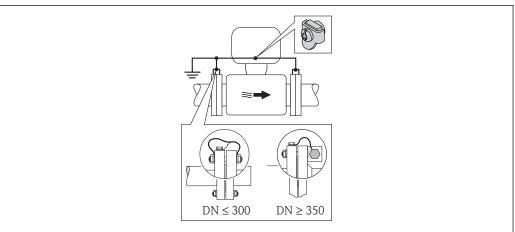

Potential equalization via measuring tube

# Connection example in special situations

Unlined and ungrounded metal pipe

This connection method also applies in situations where:

- The customary potential equalization is not used
- Equalizing currents are present

Potential equalization via ground terminal and pipe flanges

A001631

Note the following when installing:

- Connect both sensor flanges to the pipe flange via a ground cable and ground them.
- Connect the connection housing of the transmitter or sensor to ground potential by means of the ground terminal provided for the purpose.To mount the ground cable:
  - If DN  $\leq$  300 (12"): Mount the ground cable directly on the conductive flange coating of the sensor with the flange screws.
  - If DN  $\geq$  350 (14"): Mount the ground cable directly on the metal transport bracket.

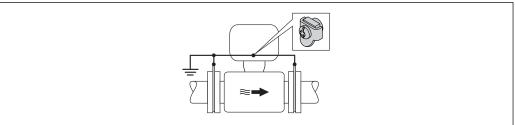

Ground cable Copper wire, at least 6 mm<sup>2</sup> (0.0093 in<sup>2</sup>)

- For remote device versions, the ground terminal in the example always refers to the sensor and **not** to the transmitter.
- The necessary ground cable can be ordered from Endress+Hauser .

Plastic pipe or pipe with insulating liner

This connection method also applies in situations where:

- The customary potential equalization is not used
- Equalizing currents are present

A0016318

■ 11 Potential equalization via ground terminal and ground disks

Note the following when installing:

The ground disks must be connected to the ground terminal via the ground cable and be connected to ground potential.

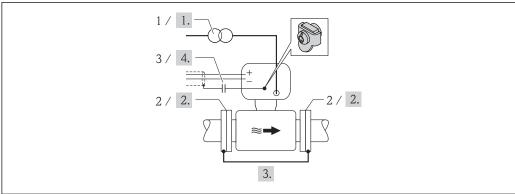

| Ground cable | Copper wire, at least $6 \text{ mm}^2$ (0.0093 in <sup>2</sup> ) |  |
|--------------|--|--|
|--------------|--|--|

- For remote device versions, the ground terminal in the example always refers to the sensor and **not** to the transmitter.

Pipe with a cathodic protection unit

This connection method is only used if the following two conditions are met:

- Metal pipe without liner or pipe with electrically conductive liner
- Cathodic protection is integrated in the personal protection equipment

10016310

- 12 Potential equalization and cathodic protection
- 1 Isolation transformer power supply
- 2 Electrically isolated from the pipe
- 3 Capacitor

| Ground cable | Copper wire, at least 6 mm <sup>2</sup> (0.0093 in <sup>2</sup> ) |
|--------------|---|
|--------------|---|

- 1. Connect the measuring device to the power supply such that it is floating in relation to the protective ground.
- 2. Install the sensor in the pipe in a way that provides electrical insulation.
- 3. Connect the two flanges of the pipe to one another via a ground cable.
- 4. Guide the shield of the signal lines through a capacitor.
- For remote device versions, the ground terminal in the example always refers to the sensor and **not** to the transmitter.
- The necessary ground cable can be ordered from Endress+Hauser.

#### **Terminals**

#### Transmitter

- Supply voltage cable: plug-in spring terminals for wire cross-sections 0.5 to 2.5 mm<sup>2</sup> (20 to 14 AWG)
- Signal cable: pluq-in spring terminals for wire cross-sections 0.5 to 2.5 mm<sup>2</sup> (20 to 14 AWG)
- Electrode cable: spring terminals for wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)
- Coil current cable: spring terminals for wire cross-sections 0.5 to 2.5 mm<sup>2</sup> (20 to 14 AWG)

#### Sensor connection housing

Spring terminals for wire cross-sections 0.5 to 2.5 mm<sup>2</sup> (20 to 14 AWG)

#### Cable entries

#### Cable entry thread

- M20 x 1.5
- Via adapter:
  - NPT ½"
  - G ½"

- G 72

### Cable gland

- For standard cable: M20 × 1.5 with cable  $\phi$ 6 to 12 mm (0.24 to 0.47 in)
- For reinforced cable: M20  $\times$  1.5 with cable  $\phi$ 9.5 to 16 mm (0.37 to 0.63 in)

If metal cable entries are used, use a grounding plate.

# Cable specification

# Permitted temperature range

- -40 °C (-40 °F) to +80 °C (+176 °F)
- Minimum requirement: cable temperature range ≥ ambient temperature +20 K

### Power supply cable

Standard installation cable is sufficient.

#### Signal cable

# Current output

- For 0-20 mA and 4-20 mA: standard installation cable is sufficient.
- For 4-20 mA HART: Shielded cable recommended. Observe grounding concept of the plant.

# Pulse/frequency/switch output

Standard installation cable is sufficient.

#### Status input

Standard installation cable is sufficient.

#### EtherNet/IP

The standard ANSI/TIA/EIA-568-B.2 Annex specifies CAT 5 as the minimum category for a cable used for EtherNet/IP. CAT 5e and CAT 6 are recommended.

For more information on planning and installing EtherNet/IP networks, please refer to the "Media Planning and Installation Manual. EtherNet/IP" of the ODVA Organization.

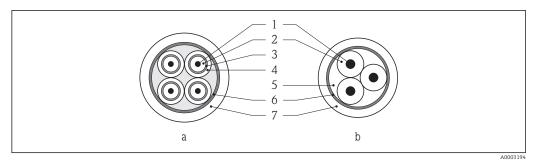

# Connecting cable for remote version

### Electrode cable

| Standard cable                       | $3\times0.38~mm^2$ (20 AWG) with common, braided copper shield (0 $\sim$ 7 mm (0.28")) and individually shielded cores |  |
|--------------------------------------|--|--|
| Cable for empty pipe detection (EPD) | $4$ ×0.38 mm² (20 AWG) with common, braided copper shield (# $\sim$ 7 mm (0.28")) and individually shielded cores      |  |
| Conductor resistance                 | ≤50 Ω/km (0.015 Ω/ft)  |  |
| Capacitance: core/shield             | <420 pF/m (128 pF/ft)  |  |
| Operating temperature                | −20 to +80 °C (−68 to +176 °F)   |  |

# Coil current cable

| Standard cable                          | $2\times0.75~mm^2$ (18 AWG) with common, braided copper shield (4 $\sim7~mm$ (0.28")) and individually shielded cores |  |
|---|---|--|
| Conductor resistance                    | $\leq$ 37 $\Omega$ /km (0.011 $\Omega$ /ft)   |  |
| Capacitance: core/core, shield grounded | ≤120 pF/m (37 pF/ft)  |  |
| Operating temperature                   | −20 to +80 °C (−68 to +176 °F)  |  |
| Test voltage for cable insulation       | ≤ AC 1433 V r.m.s. 50/60 Hz or ≥ DC 2026 V  |  |

■ 13 Cable cross-section

- a Electrode cable
- b Coil current cable
- 1 Core
- 2 Core insulation
- 3 Core shield
- 4 Core jacket
- 5 Core reinforcement
- 6 Cable shield
- 7 Outer jacket

# Reinforced connecting cable

Use in the following situations:

- When laying the cable directly in the ground
- Where there is a risk of damage from rodents
- The reinforced connecting cable with an additional, reinforcing metal braid can be ordered from Endress+Hauser .

Operation in zones of severe electrical interference

The measuring system meets the general safety requirements ( $\Rightarrow \triangleq 63$ ) and EMC specifications ( $\Rightarrow \triangleq 30$ ).

Grounding is by means of the ground terminal provided for the purpose inside the connection housing. The stripped and twisted lengths of cable shield to the ground terminal must be as short as possible.

# Performance characteristics

# Reference operating conditions

# In accordance with DIN EN 29104

- Fluid temperature: +28±2 °C (+82±4 °F)
- Ambient temperature range: +22±2 °C (+72±4 °F)
- Warm-up period:30 min

#### Installation

- Inlet run > 10 × DN
- Outlet run > 5 × DN
- Sensor and transmitter grounded.
- The sensor is centered in the pipe.

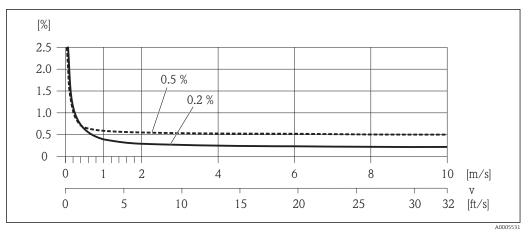

#### Maximum measured error

### Error limits under reference operating conditions

o.r. = of reading

# Volume flow

- $\bullet$  ±0.5 % o.r. ± 1 mm/s (0.04 in/s)
- Optional: ±0.2 % o.r. ± 2 mm/s (0.08 in/s)
- Fluctuations in the supply voltage do not have any effect within the specified range.

■ 14 Maximum measured error in % o.r.

# **Electrical conductivity**

Max. measured error not specified.

#### Accuracy of outputs

o.r. = of reading; o.f.s. = of full scale value

The outputs have the following base accuracy specifications.

Current output

# Pulse/frequency output

| Accuracy | Max. ±50 ppm o.r. |
|----------|-------------------|
|----------|-------------------|

# Repeatability

o.r. = of reading

#### Volume flow

Max.  $\pm 0.1$  % o.r.  $\pm$  0.5 mm/s (0.02 in/s)

# **Electrical conductivity**

Max. ±5 % o.r.

# Influence of ambient temperature

o.r. = of reading; o.f.s. = of full scale value

# **Current output**

| Temperature coefficient | Typically $\pm 50$ ppm/°C o.r. or $\pm 1~\mu$ A/°C |
|-------------------------|--|
|-------------------------|--|

# Pulse/frequency output

| Temperature coefficient | Max.±0.5 ppm v.M./°C |
|-------------------------|----------------------|
|-------------------------|----------------------|

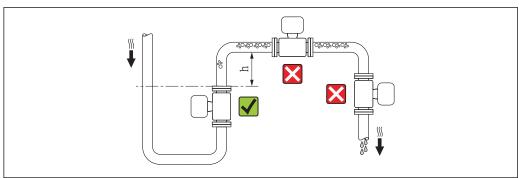

# Installation

No special measures such as supports are necessary. External forces are absorbed by the construction of the device.

# Mounting location

Preferably install the sensor in an ascending pipe, and ensure a sufficient distance to the next pipe elbow:  $h \ge 2 \times DN$ 

24

A001706

To prevent measuring errors arising from accumulation of gas bubbles in the measuring tube, avoid the following mounting locations in the pipe:

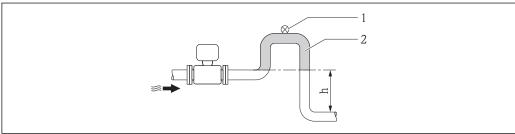

- Highest point of a pipeline.
- Directly upstream of a free pipe outlet in a down pipe.

# Installation in down pipes

Install a siphon or a vent valve downstream of the sensor in down pipes whose length  $h \ge 5$  m (16.4 ft). This precaution is to avoid low pressure and the consequent risk of damage to the measuring tube. This measure also prevents the system losing prime, which could cause air pockets.

For information on the liner's resistance to partial vacuum ( $\rightarrow \implies 33$ )

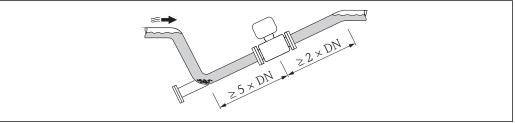

A0017064

- 15 Installation in a down pipe
- 1 Vent valve
- 2 Pipe siphon
- h Length of down pipe

# Installation in partially filled pipes

A partially filled pipe with a gradient necessitates a drain-type configuration. The empty pipe detection (EPD) function offers additional protection by detecting empty or partially filled pipes.

- Do not install the sensor at the lowest point in the drain: risk of solids accumulating.
- It is advisable to install a cleaning valve.

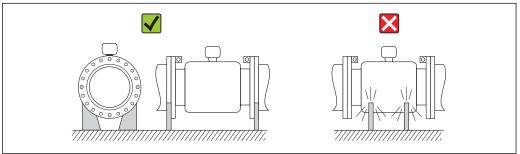

A0017063

# For very heavy sensors

If the nominal diameter DN  $\geq 350$  (14 in), mount the sensor on a foundation of adequate load-bearing strength.

Do not support the weight of the sensor on the metal casing as this could damage the metal casing and the internal magnetic coils.

#### Orientation

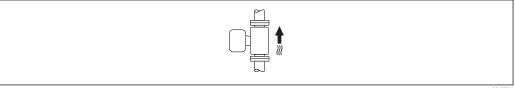

The direction of the arrow on the sensor nameplate helps you to install the sensor according to the flow direction (direction of medium flow through the piping).

An optimum orientation position helps avoid gas and air accumulations and deposits in the measuring tube.

The measuring device also offers the empty pipe detection function to detect partially filled measuring pipes in the event of outgassing fluids or variable process pressures.

#### Vertical

This is the optimum orientation for self-emptying piping systems and for use in conjunction with empty pipe detection.

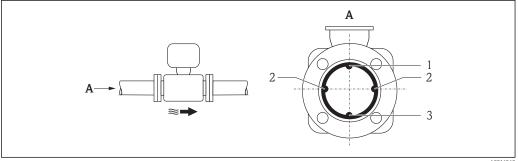

# Horizontal

The measuring electrode plane must be horizontal. This prevents brief insulation of the two measuring electrodes by entrained air bubbles.

With horizontal orientation, empty pipe detection only works if the transmitter housing is pointing upwards as otherwise there is no guarantee that the empty pipe detection function will actually respond to a partially filled or empty measuring tube.

#### **■** 16 Horizontal orientation

- EPD electrode for empty pipe detection
- 2 Measuring electrodes for signal detection
- 3 Reference electrode for potential equalization

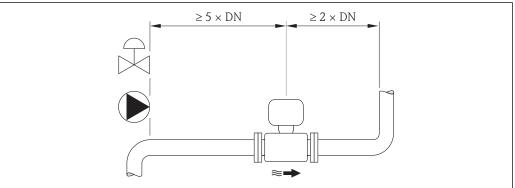

Inlet and outlet runs

If possible, install the sensor upstream from fittings such as valves, T-pieces or elbows.

26

Observe the following inlet and outlet runs to comply with accuracy specifications:

- Inlet run  $\geq$  5 × DN
- Outlet run  $\geq$  2 × DN

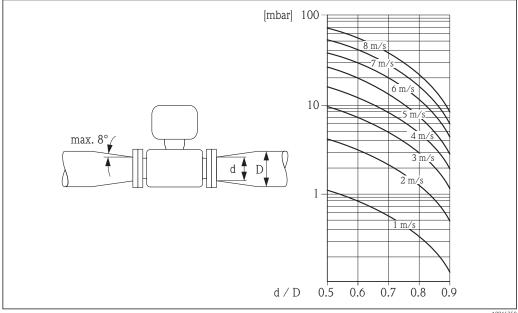

# Adapters

Suitable adapters to DIN EN 545 (double-flange reducers) can be used to install the sensor in largerdiameter pipes. The resultant increase in the rate of flow improves measuring accuracy with very slow-moving fluids.

The nomogram shown here can be used to calculate the pressure loss caused by reducers and expanders:

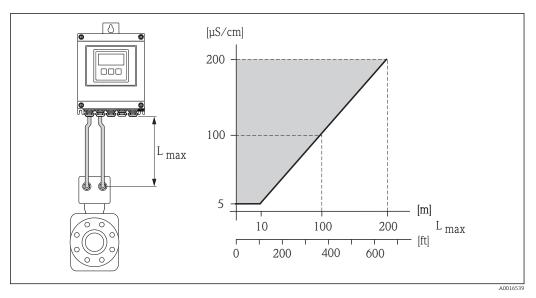

- Calculate the ratio of the diameters d/D.
- From the nomogram read off the pressure loss as a function of flow velocity (downstream from the reduction) and the d/D ratio.
- The nomogram only applies to liquids with a viscosity similar to that of water.

# Length of connecting cable

To ensure correct measuring results when using the remote version, observe the maximum permitted cable length  $L_{max}$ . This length is determined by the conductivity of the fluid.

If measuring liquids in general:  $5 \mu S/cm$ 

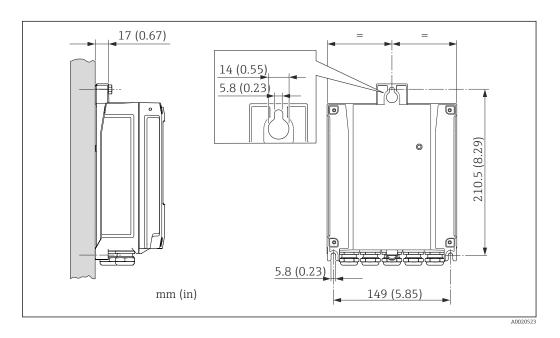

■ 17 Permitted length of connecting cable for remote version

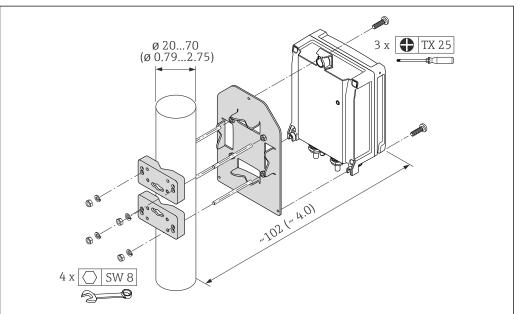

Area shaded gray = permitted range  $L_{max}$ =length of connecting cable in [m] ([ft]) [ $\mu$ S/cm] = fluid conductivity

# Installing the wall-mount housing

# Wall mounting

# Pipe mounting

40020705

i

# Special mounting instructions

# Display protection

To ensure that the optional display protection can be easily opened, maintain the following minimum head clearance: 350 mm (13.8 in)

# **Environment**

# Ambient temperature range

| Transmitter   | -40 to +60 °C (-40 to +140 °F)   |  |
|---------------|--|--|
| Local display | $-20$ to $+60^{\circ}\text{C}$ ( $-4$ to $+140^{\circ}\text{F}$ ), the readability of the display may be impaired at temperatures outside the temperature range. |  |
| Sensor        | • Flange material carbon steel: $-10$ to $+60$ °C ( $+14$ to $+140$ °F)<br>• Flange material stainless steel: $-40$ to $+60$ °C ( $-40$ to $+140$ °F)            |  |
|               | Mount the transmitter separately from the sensor if both the ambient and fluid temperatures are high.  |  |
| Liner         | Do not exceed or fall below the permitted temperature range of the liner ( $\rightarrow \  \  \  \  \  \  \  \  \  \  \  \  \ $                                  |  |

#### If operating outdoors:

- Install the measuring device in a shady location.
- Avoid direct sunlight, particularly in warm climatic regions.
- Avoid direct exposure to weather conditions.
- Protect the display against impact.
- Protect the display from abrasion by sand in desert areas.

# Storage temperature

The storage temperature corresponds to the operating temperature range of the measuring transmitter and the appropriate measuring sensors.

- Protect the measuring device against direct sunlight during storage in order to avoid unacceptably high surface temperatures.
- Select a storage location where moisture cannot collect in the measuring device as fungus or bacteria infestation can damage the liner.
- If protection caps or protective covers are mounted these should never be removed before installing the measuring device.

# Atmosphere

If a plastic transmitter housing is permanently exposed to certain steam and air mixtures, this can damage the housing.

If you are unsure, please contact your Endress+Hauser Sales Center for clarification.

#### Degree of protection

#### Transmitter

- As standard: IP66/67, type 4X enclosure
- When housing is open: IP20, type 1 enclosure

#### Sensor

- As standard: IP66/67, type 4X enclosure
- Optionally available for remote version:

IP68, type 6P enclosure (for DN  $\leq$  300 (12") only possible in conjunction with stainless steel flanges)

Not suitable for use in corrosive atmospheres/liquids or in buried applications if special precautions are not taken.

#### Shock resistance

Acceleration up to 2 g following IEC 60068-2-6

#### Vibration resistance

Acceleration up to 2 g following IEC 60068-2-6

#### Mechanical load

- Protect the transmitter housing against mechanical effects, such as shock or impact; the use of the remote version is sometimes preferable.
- Never use the transmitter housing as a ladder or climbing aid.

# Electromagnetic compatibility (EMC)

- As per IEC/EN 61326 and NAMUR Recommendation 21 (NE 21)
- Complies with emission limits for industry as per EN 55011 (Class A)
- i

Details are provided in the Declaration of Conformity.

# **Process**

#### Medium temperature range

- 0 to +80 °C (+32 to +176 °F) for hard rubber, DN 350 to 2400 (14 to 90")
- -20 to +50 °C (-4 to +122 °F) for polyurethane, DN 50 to 1200 (2 to 48")
- -20 to +90 °C (-4 to +194 °F) for PTFE, DN 50 to 300 (2 to 12")

#### Conductivity

 $\geq$  5 µS/cm for liquids in general

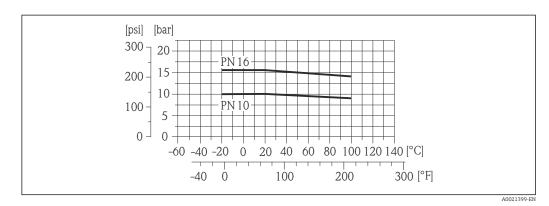

Note that in the case of the remote version, the requisite minimum conductivity also depends on the cable length  $(\rightarrow \cong 27)$ .

#### Flow limit

The diameter of the pipe and the flow rate determine the nominal diameter of the sensor. The optimum flow velocity is between 2 to 3 m/s (6.56 to 9.84 ft/s). Also match the velocity of flow (v) to the physical properties of the fluid:

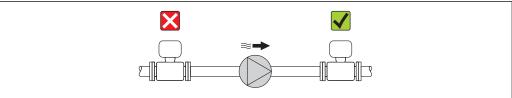

- v < 2 m/s (6.56 ft/s): for abrasive fluids (e.g. potter's clay, lime milk, ore slurry)
- v > 2 m/s (6.56 ft/s): for fluids producing buildup (e.g. wastewater sludges)

#### Pressure loss

- No pressure loss occurs if the sensor is installed in a pipe with the same nominal diameter.

#### System pressure

- Never install the sensor on the pump suction side in order to avoid the risk of low pressure, and thus damage to the liner.
- Furthermore, install pulse dampers if reciprocating, diaphragm or peristaltic pumps are used.
- i
- For information on the measuring system's resistance to vibration and shock ( $\rightarrow \cong 30$ ), ( $\rightarrow \cong 30$ )

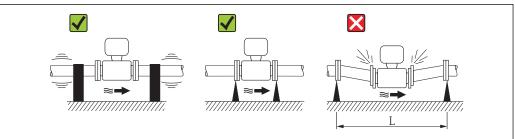

A0015594

#### **Vibrations**

In the event of very strong vibrations, the pipe and sensor must be supported and fixed. It is also advisable to mount the sensor and transmitter separately.

For information on the permitted resistance to vibration and shock ( $\rightarrow \stackrel{\triangle}{=} 30$ ), ( $\rightarrow \stackrel{\triangle}{=} 30$ )

1) Ground disks can be used for all the flange standards/pressure ratings which can be supplied in the standard version.

## Weight

## **Compact version**

Weight data:

- Including the transmitter
  - Polycarbonate plastic: 1.3 kg (2.9 lbs)
- Aluminum: 2.0 kg (4.4 lbs)Excluding packaging material

Weight in SI units

*Lap joint flange; fixed flange DN*  $\geq$  350 (14")

<sup>1)</sup> Values with polycarbonate plastic transmitter; values for aluminum transmitter:  $\pm$  1.45 lbs

#### Transmitter remote version

Wall-mount housing

Depends on the material of the wall-mount housing:

- Polycarbonate plastic: 1.3 kg (2.9 lb)
- Aluminum: 2.0 kg (4.4 lb)

## Sensor remote version

Weight data:

- Including sensor connection housing
- Excluding the connecting cable
- Excluding packaging material

Weight in SI units

Designed acc. to EN 1092-1 (not to DIN 2501) 1)

#### Materials

#### Transmitter housing

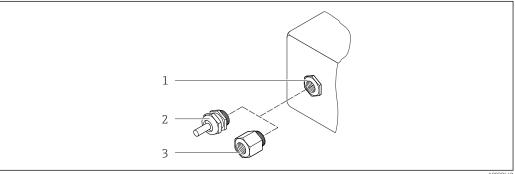

## Order code for "Housing"

- Compact version, standard:
  - Option A: coated aluminum AlSi10Mg
  - Option **M**: polycarbonate plastic
- Compact version, inclined:
  - Option Q: polycarbonate plastic
  - Option **R**: coated aluminum AlSi10Mg
- Remote version (wall-mount housing):
  - Option **N**: polycarbonate plastic
  - Option P: coated aluminum AlSi10Mg

#### Window material

| Transmitter housing material | Window material |
|------------------------------|-----------------|
| Polycarbonate plastic        | Plastic         |
| Aluminum AlSi10Mg            | Glass           |

## Cable entries/cable glands

## ■ 27 Possible cable entries/cable glands

- Cable entry in transmitter housing, wall-mount housing or connection housing with internal thread M20 x
- Cable gland M20 x 1.5
- Adapter for cable entry with internal thread G  $\frac{1}{2}$ " or NPT  $\frac{1}{2}$ "

Compact and remote versions and sensor connection housing

| Cable entry/cable gland   | Material  |
|---|---|
| Cable gland M20 × 1.5   | Plastic   |
| Remote version: cable gland M20 × 1.5  Option CK "IP68, Type 6P, waterproof"  Option of reinforced connecting cable | <ul> <li>Sensor connection housing:         Nickel-plated brass         Transmitter wall-mount housing:         Plastic     </li> </ul> |
| Adapter for cable entry with internal thread G ½" or NPT ½"   | Nickel-plated brass   |

#### Device plug

| Electrical connection | Material   |  |  |  |
|-----------------------|--|--|--|--|
| Plug M12x1            | <ul> <li>Socket: Stainless steel 1.4404 (316L)</li> <li>Contact housing: Polyamide</li> <li>Contacts: Gold-plated brass</li> </ul> |  |  |  |

#### Connecting cable for remote version

Electrode and coil current cable

- Standard cable: PVC cable with copper shield
- Reinforced cable: PVC cable with copper shield and additional steel wire braided jacket

#### Sensor housing

- DN 50 to 300 (2 to 12"): aluminum coated AlSi10Mg
- DN 350 to 2400 (14 to 90"): carbon steel with protective varnish

## Sensor connection housing

Aluminum coated AlSi10Mg

#### Sensor cable entries

Order code for "Housing", option N "Remote, polycarbonate" or option P "Remote, coated aluminum" The various cable entries are suitable for hazardous and non-hazardous areas.

| Electrical connection        | Material            |
|------------------------------|---------------------|
| Cable gland M20 × 1.5        | Nickel-plated brass |
| Thread G ½"<br>via adapter   | Nickel-plated brass |
| Thread NPT ½"<br>via adapter | Nickel-plated brass |

## Measuring tubes

- DN 50 to 300 (2 to 12"): stainless steel 1.4301 (304), 1.4306 (304L)
- DN 350 to 2400 (14 to 90"): stainless steel 1.4301 (304), 1.4307

#### Liner

- DN 50 to 300 (2 to 12"): PTFE
- DN 50 to 1200 (2 to 48"): polyurethane
- DN 350 to 2400 (14 to 90"): hard rubber

#### Electrodes

1.4435 (304L), Alloy C22

#### **Process connections**

EN 1092-1 (DIN 2501)

- DN  $\leq$  300 (12"): 1.0038 (S235JRG2), 1.4301 (304), 1.4306 (304L), 1.4307 (304L)
- DN ≥ 350 (14"): 1.0038 (S235JRG2), A105

#### **ASME B16.5**

- DN ≤ 300 (12"): A105, 316L
- DN ≥ 350 (14"): A105

## AWWA C207

DN 1200 to 2200 (48 to 90"): 1.0044 (S275JR), 1.0425 (316L) (P265GH), A105, A181

#### AS 2129

DN 350 to 1200 (14 to 48"): 1.0038 (S235JRG2), 1.0345 (P235GH), 1.0425 (316L) (P265GH), A105, FE 410 WB

#### AS 4087

DN 350 to 1200 (14 to 48"): 1.0044 (S275JR), 1.0425 (316L) (P265GH), A105

#### Seals

In accordance with DIN EN 1514-1

#### Accessories

Display protection

Stainless steel 1.4301

Ground disks

1.4435 (316L), Alloy C22

#### Fitted electrodes

Measurement, reference and empty pipe detection electrodes available as standard with:

- 1.4435 (304L)
- Alloy C22

## Process connections

#### Flange connections:

- EN 1092-1 (DIN 2501)
  - DN ≤ 300 (12"): lap joint flange (PN 10/16), lap joint flange, stamped plate (PN 10) = form A
  - DN  $\geq$  350 (14"): fixed flange (PN 6/10) = flat face
- ASME B16.5
  - DN ≤ 300 (12"): lap joint flange (Class 150)
  - DN  $\geq$  350 (14"): fixed flange (Class 150)
- AWWA C207

DN 1200 to 2200 (48 to 90"): fixed flange (Class D)

■ AS 2129

DN 350 to 1200 (14 to 48"): fixed flange (Table E)

■ AS 4087

DN 350 to 1200 (14 to 48"): fixed flange (PN 16)

 $\mathbf{i}$ 

For information on the materials of the process connections ( $\rightarrow \triangleq 60$ )

#### Surface roughness

Electrodes with 1.4435 (304L), Alloy C22:  $\leq$  0.3 to 0.5  $\mu$ m (11.8 to 19.7 in)

(All data relate to parts in contact with fluid)

## Operability

#### Operating concept

#### Operator-oriented menu structure for user-specific tasks

- Commissioning
- Operation
- Diagnostics
- Expert level

#### Rapid and safe commissioning

- Guided menus ("Make-it-run" wizards) for applications
- Menu guidance with brief explanations of the individual parameter functions

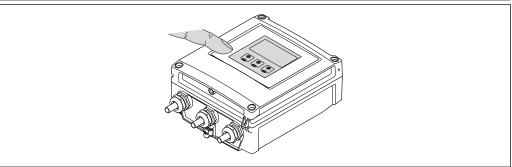

#### Reliable operation

- Operation in the following languages:
  - Via local display:
    - English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Bahasa (Indonesian), Vietnamese, Czech
  - Via "FieldCare" operating tool:
  - English, German, French, Spanish, Italian, Dutch, Chinese, Japanese
  - Via Web browser:
    - English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Bahasa (Indonesian), Vietnamese, Czech
- Uniform operating philosophy applied to device, operating tools and Web browser
- If replacing the electronic module, transfer the device configuration via the plug-in memory (HistoROM DAT) which contains the process and measuring device data and the event logbook. No need to reconfigure.

#### Efficient diagnostics increase measurement availability

- Troubleshooting measures can be called up via the device, operating tools and Web browser
- Diverse simulation options, logbook for events that occur and optional line recorder functions

#### Local operation

Δ0020538

#### Display elements

- 4-line display
- White background lighting; switches to red in event of device errors
- Format for displaying measured variables and status variables can be individually configured
- Permitted ambient temperature for the display: -20 to +50 °C (-4 to +122 °F)
  The readability of the display may be impaired at temperatures outside the temperature range.

#### Operating elements

External operation via touch control; 3 optical keys: 📵, 🔘, 📵

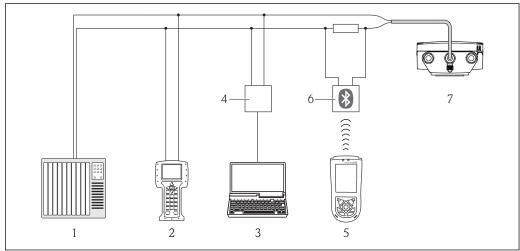

#### Additional functionality

- Data backup function
  - The device configuration can be saved in the display module.
- Data comparison function
  - The device configuration saved in the display module can be compared to the current device configuration.
- Data transfer function

The transmitter configuration can be transmitted to another device using the display module.

## Remote operation

## Via HART protocol

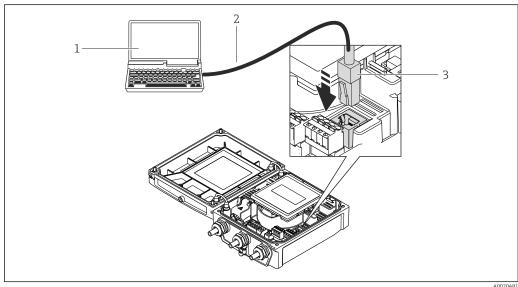

A0017124

**28** ■ Options for remote operation via HART protocol

- 1 Control system (e.g. PLC)
- 2 Field Communicator 475
- 3 Computer with operating tool (e.g. FieldCare, AMS Device Manager, SIMATIC PDM)
- 4 Commubox FXA195 (USB)
- 5 Field Xpert SFX100
- VIATOR Bluetooth modem with connecting cable
- Transmitter

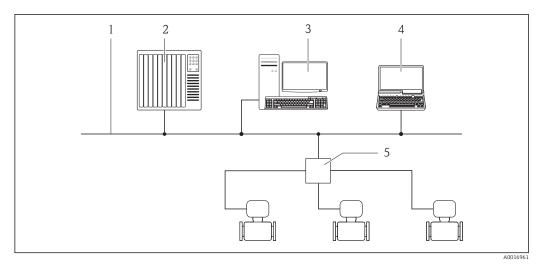

## Via service interface (CDI-RJ45)

- Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or with "FieldCare" operating tool with COM DTM "CDI Communication TCP/IP"
- Standard Ethernet connecting cable with RJ45 plug
- Service interface (CDI -RJ45) of the measuring device with access to the integrated Web server

#### Via Ethernet network

This communication interface is present in the following device version: Order code for "Output", option **N**: EtherNet/IP

- 1 Ethernet network
- 2 Automation system, e.g. "RSLogix" (Rockwell Automation)
- 3 Workstation for measuring device operation: with Add-on Profile Level 3 for "RSLogix 5000" (Rockwell Automation) or with Electronic Data Sheet (EDS)
- 4 Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or with "FieldCare" operating tool with COM DTM "CDI Communication TCP/IP"
- 5 Ethernet switch

## Certificates and approvals

#### CE mark

The measuring system is in conformity with the statutory requirements of the applicable EC Directives. These are listed in the corresponding EC Declaration of Conformity along with the standards applied.

Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

### C-Tick symbol

The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".

## Drinking water approval

- ACS
- KTW/W270
- NSF 61
- WRAS BS 6920

#### EtherNet/IP certification

The measuring device is certified and registered by the ODVA (Open Device Vendor Association). The measuring system meets all the requirements of the following specifications:

- Certified in accordance with the ODVA Conformance Test
- EtherNet/IP Performance Test
- EtherNet/IP PlugFest compliance
- The device can also be operated with certified devices of other manufacturers (interoperability)

# Other standards and guidelines

- EN 60529
  - Degrees of protection by housing (IP code)
- EN 61010-1

Protection Measures for Electrical Equipment for Measurement, Control, Regulation and Laboratory Procedures.

- IEC/EN 61326
  - $\label{lem:embedding} \mbox{Emission in accordance with Class A requirements. Electromagnetic compatibility (EMC requirements)}$
- ANSI/ISA-61010-1 (82.02.01): 2004
   Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use Part 1 General Requirements

CAN/CSA-C22.2 No. 61010-1-04

Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use - Part 1 General Requirements

■ NAMUR NE 21

Electromagnetic compatibility (EMC) of industrial process and laboratory control equipment.

NAMUR NE 32

Data Retention in the Event of a Power Failure in Field and Control Instruments with Microprocessors

■ NAMUR NE 43

Standardization of the signal level for the breakdown information of digital transmitters with analog output signal.

■ NAMUR NE 53

Software of field devices and signal-processing devices with digital electronics

■ NAMUR NE 105

Specifications for Integrating Fieldbus Devices in Engineering Tools for Field Devices

NAMUR NE 107

Self-monitoring and diagnosis of field devices

■ NAMUR NE 131

Requirements for field devices for standard applications

## Ordering information

Detailed ordering information is available from the following sources:

- In the Product Configurator on the Endress+Hauser website: www.endress.com → Select country → Instruments → Select device → Product page function: Configure this product
- From your Endress+Hauser Sales Center: www.endress.com/worldwide

## Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

## Application packages

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

The application packages can be ordered from Endress+Hauser either directly with the device or subsequently. Detailed information on the order code in question is available from your local Endress +Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

### Cleaning

| Package                          | Description   |
|----------------------------------|---|
| Electrode cleaning circuit (ECC) | The electrode cleaning circuit (ECC) function has been developed to have a solution for applications where magnetite (Fe $_3$ O $_4$ ) deposits frequently occur (e.g. hot water). Since magnetite is highly conductive this build up leads to measuring errors and ultimately to the loss of signal. The option is designed to AVOID build up of highly conductive matter and thin layers (typically magnetite). |

64

## **Diagnostics functions**

| Package                    | Description   |  |
|----------------------------|---|--|
| HistoROM extended function | Comprises extended functions concerning the event log and the activation of the measured value memory.  |  |
|                            | Event log: Memory volume is extended from 20 message entries (basic version) to up to 100 entries.  |  |
|                            | <ul> <li>Data logging (line recorder):</li> <li>Memory capacity for up to 1000 measured values is activated.</li> <li>250 measured values can be output via each of the 4 memory channels. The recording interval can be defined and configured by the user.</li> <li>Data logging is visualized via the local display or FieldCare.</li> </ul> |  |

## **Heartbeat Technology**

| Package                               | Description   |  |
|---------------------------------------|---|--|
| Heartbeat Verification<br>+Monitoring | Heartbeat Monitoring: Continuously supplies monitoring data, which are characteristic of the measuring principle, for an external condition monitoring system. This makes it possible to:  Draw conclusions - using these data and other information - about the impact the measuring application has on the measuring performance over time.  Schedule servicing in time.  Monitor the product quality, e.g. gas pockets.        |  |
|                                       | <ul> <li>Heartbeat Verification:</li> <li>Makes it possible to check the device functionality on demand when the device is installed, without having to interrupt the process.</li> <li>Access via onsite operation or other interfaces (requires no on-site presence).</li> <li>End-to-end, traceable documentation of the verification results and verification report.</li> <li>Extension of calibration intervals.</li> </ul> |  |

## Accessories

Various accessories, which can be ordered with the device or subsequently from Endress+Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

## Device-specific accessories

### For the transmitter

| Accessories                                 | Description   |  |
|---|---|--|
| Display protection                          | Is used to protect the display against impact or scoring from sand in desert areas.         |  |
|   | For details, see Special Documentation SD00333F   |  |
| Connecting cable for remote version         | Coil current and electrode cables, various lengths, reinforced cables available on request. |  |
| Ground cable                                | Set, consisting of two ground cables for potential equalization.                            |  |
| Pipe mounting set                           | Pipe mounting set for transmitter.  |  |
| Compact → remote conversion kit             | For converting a compact device version to a remote device version.                         |  |
| Promag 50/53 → Promag<br>400 conversion kit | For converting a Promag with transmitter 50/53 to a Promag 400.                             |  |

## For the sensor

| Accessories  | Description   |
|--------------|---|
| Ground disks | Are used to ground the fluid in lined measuring tubes to ensure proper measurement. |
|              | For details, see Installation Instructions EA00070D                                 |

# Communication-specific accessories

| Accessories                    | Description  |
|--------------------------------|--|
| Commubox FXA195                | For intrinsically safe HART communication with FieldCare via the USB interface.  |
| HART                           | For details, see "Technical Information" TI00404F  |
| HART Loop Converter<br>HMX50   | Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values.  |
|                                | For details, see "Technical Information" TI00429F and Operating Instructions BA00371F  |
| Wireless HART adapter<br>SWA70 | Is used for the wireless connection of field devices.  The WirelessHART adapter can be easily integrated into field devices and existing infrastructures, offers data protection and transmission safety and can be operated in parallel with other wireless networks with minimum cabling complexity. |
|                                | For details, see Operating Instructions BA00061S   |
| Fieldgate FXA320               | Gateway for the remote monitoring of connected 4-20 mA measuring devices via a Web browser.  |
|                                | For details, see "Technical Information" TI00025S and Operating Instructions BA00053S  |
| Fieldgate FXA520               | Gateway for the remote diagnostics and remote configuration of connected HART measuring devices via a Web browser.   |
|                                | For details, see "Technical Information" TI00025S and Operating Instructions BA00051S  |
| Field Xpert SFX100             | Compact, flexible and robust industry handheld terminal for remote configuration and for obtaining measured values via the HART current output (4-20 mA).  |
|                                | For details, see Operating Instructions BA00060S   |

## Service-specific accessories

| Accessories | Description   |
|-------------|---|
| Applicator  | Software for selecting and sizing Endress+Hauser measuring devices:  Calculation of all the necessary data for identifying the optimum flowmeter: e.g. nominal diameter, pressure loss, accuracy or process connections.  Graphic illustration of the calculation results |
|             | Administration, documentation and access to all project-related data and parameters over the entire life cycle of a project.  |
|             | Applicator is available:  Via the Internet: https://wapps.endress.com/applicator  On CD-ROM for local PC installation.  |

| Life cycle management for your plant W@M supports you with a wide range of software applications over the entire process: from planning and procurement, to the installation, commissioning ar operation of the measuring devices. All the relevant device information, such a the device status, spare parts and device-specific documentation, is available fo every device over the entire life cycle. The application already contains the data of your Endress+Hauser device. Endr +Hauser also takes care of maintaining and updating the data records.  W@M is available:  Via the Internet: www.endress.com/lifecyclemanagement On CD-ROM for local PC installation. |  |
|--|--|
| FDT-based plant asset management tool from Endress+Hauser. It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.  For details, see Operating Instructions BA00027S and BA00059S  |  |
|  |  |

#### System components

| Accessories                             | Description   |  |
|---|---|--|
| Memograph M graphic<br>display recorder | The Memograph M graphic data manager provides information on all the relevant measured variables. Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on a SD card or USB stick. |  |
|   | For details, see "Technical Information" TI00133R and Operating Instructions BA00247R   |  |

## **Documentation**

The following document types are available:

- On the CD-ROM supplied with the device
- In the Download Area of the Endress+Hauser Internet site: www.endress.com → Download

#### Standard documentation

| Communication | Document type                | Documentation code |
|---------------|------------------------------|--------------------|
| HART          | Operating Instructions       | BA01062D           |
| EtherNet/IP   | Operating Instructions       | BA01213D           |
|               | Brief Operating Instructions | KA01113D           |

### Supplementary devicedependent documentation

| Document type             | Approval             | Documentation code                               |
|---------------------------|----------------------|--|
| Special Documentation     | Heartbeat Technology | SD01183D   |
| Installation Instructions |                      | Specified for each individual accessory (→ 🖺 65) |
