

# **Technical Information**

# Cerabar S PMC71, PMP71, PMP75

Process pressure measurement
Pressure transmitter with ceramic and metal sensors
Overload-resistant and function-monitored; Communication via
HART, PROFIBUS PA or FOUNDATION Fieldbus

#### Application

The Cerabar S pressure transmitter is used for the following measuring tasks:

- Absolute pressure and gauge pressure in gases, steams or liquids in all areas of process engineering and process measurement technology
- Level, volume or mass measurements in liquids
- High process temperature
  - without diaphragm seals up to 150 °C (302 °F)
  - with typical diaphragm seals up to 400 °C (752 °F)
- High pressure up to 700 bar (10500 psi)
- MID part certificate as per OIML R117-1 Edition 2007 (E) and EN 12405-1/A1 Edition 2006
- International usage thanks to a wide range of approvals

#### Your benefits

- Very good reproducibility and long-term stability
- High reference accuracy: up to ±0.075 %, as PLATINUM version: ±0.05 %
- Turn down up to 100:1, higher on request
- Used for process pressure monitoring up to SIL3, certified to IEC 61508 by TÜV SÜD
- HistoROM®/M-DAT memory module
- Function-monitored from the measuring cell to the electronics
- Continuous modularity for differential pressure, hydrostatics and pressure (Deltabar S – Deltapilot S – Cerabar S), e.g.
  - replaceable display
  - universal electronics
- Quick commissioning with Quick Setup menu
- Menu-guided operation
- Extensive diagnostic functions
- Device versions compliant with ASME-BPE
- Usage in drinking water: NSF

Output	4 to 20 mA with superimposed HART prot	ocol, PROFIBUS PA or FOUNDATION Field	lbus			
Options	- PMP71, PMP75: gold-rhodium coated p - PMP71, PMP75: NACE-compliant mate - PMC71, PMP71, PMP75: inspection ce - HistoROM®/M-DAT memory module - Separate housing	nt materials tion certificate 3.1				
Specialties	Metal-free measurement with PVDF connection     Special cleaning of the transmitter to remove paint-wetting substances, for use in paint shops	Process connections with minimum oil volume     Gas-tight, elastomer-free	Wide range of diaphragm seals     For high media temperatures     Process connections with minimum oil volume     Completely welded versions			

- 1) OPL: over pressure limit; dependent on the lowest-rated element, with regard to pressure, of the selected components
- 2) High-temperature version "T" for feature 100 "Additional option 1" or for feature 110 "Additional option 2"
- 3) PMP71 and PMP75: lower temperatures on request

#### Measuring principle

#### Ceramic process isolating diaphragm used for PMC71 (Ceraphire®)

#### Metallic process isolating diaphragm used for PMP71 and PMP75

P01-PMC71xxx-03-xx-xx-xx-0

P01-PMP7xxxx-03-xx-xx-xx-00

Ceramic sensor

- 1 Air pressure (gauge pressure sensors)
- 2 Ceramic substrate
- 3 Electrodes
- 4 Ceramic process isolating diaphragm

#### Metal sensor

- 1 Silicon measuring element, substrate
- 2 Wheatstone bridge
- 3 Channel with fill fluid
- 4 Metallic process isolating diaphragm

### Ceramic process isolating diaphragm used for PMC71 (Ceraphire®)

The ceramic sensor is a dry sensor, i.e. the process pressure acts directly on the robust ceramic process isolating diaphragm and deflects it. A pressure-dependent change in capacitance is measured at the electrodes of the ceramic substrate and the process isolating diaphragm. The measuring range is determined by the thickness of the ceramic process isolating diaphragm.

#### Advantages:

- Guaranteed overload resistance up to 40 times the nominal pressure (see column "OPL" in table on Page 7)
- Thanks to ultrapure 99.9% ceramic (Ceraphire®, see also "www.endress.com/ceraphire")
  - extremely high chemical stability, comparable with Alloy
  - less relaxation
  - high mechanical stability
- Suitable for vacuums
- Secondary containment for enhanced integrity
- Process temperatures up to 150 °C (302 °F)

#### Metallic process isolating diaphragm used for PMP71 and PMP75

#### PMP71

The operating pressure deflects the process isolating diaphragm and a fill fluid transfers the pressure to a resistance bridge (semiconductor technology). The pressure–dependent change in the bridge output voltage is measured and evaluated.

#### Advantages:

- Can be used for process pressures up to 700 bar (10500 psi) absolute pressure
- High long-term stability
- Guaranteed overload resistance up to 4 times the nominal pressure
- Secondary containment for enhanced integrity
- Significantly less thermal effect compared to diaphragm seal systems

#### PMP75

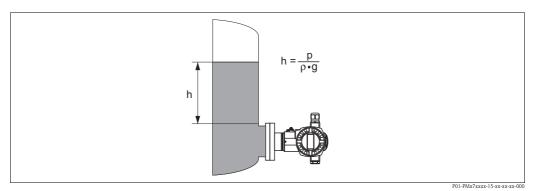

The operating pressure acts on the process isolating diaphragm of the diaphragm seal and is transferred to the process isolating diaphragm of the sensor by a diaphragm seal fill fluid. The process isolating diaphragm is deflected and a fill fluid transfers the pressure to a resistance measuring bridge. The pressure-dependent change in the bridge output voltage is measured and evaluated.

#### Advantages:

- Depending on the version, can be used for process pressures up to 400 bar (6000 psi) and extreme process temperatures
- High long-term stability
- Guaranteed overload resistance up to 4 times the nominal pressure
- Secondary containment for enhanced integrity

# Level measurement (level, volume and mass)

#### Design and operation mode

Level measurement

- h Height (level)
- p Pressure
- ρ Density of the media
- g Gravitation constant

#### Your benefits

- Selection of the level operating mode which is optimum for your application in the device software.
- Volume and mass measurements in any tank shapes by means of a freely programmable characteristic curve.
- Choice of diverse level units with automatic unit conversion.
- A specific unit can be defined.
- Has a wide range of uses, even in the following cases:
  - in the event of foam formation
  - in tanks with agitators of screen fittings
  - in the event of liquid gases

# Applications suitable for custody transfer measurement

The Parts Certificate is issued on the basis of the following standards:

- WELMEC guide 8.8 "General and Administrative Aspects of the Voluntary System of Modular Evaluation of Measuring instruments under the MID".
- OIML R117-1 Edition 2007 (E) "Dynamic measuring systems for liquids other than water".
- EN 12405-1/A1 Edition 2006 "Gas meters Conversion devices Part 1: Volume conversion".

#### Communication protocol

- 4 to 20 mA with HART communication protocol
- PROFIBUS PA
  - The Endress+Hauser devices meet the requirements of the FISCO model.
  - Due to the low current consumption of 13 mA ± 1 mA, the following number of devices can be operated on one bus segment if installing as per FISCO:
    - up to 7 Cerabar S for Ex ia, CSA IS and FM IS applications
    - up to 27 Cerabar S for all other applications, e.g. in non-hazardous areas, Ex nA etc.

Further information on PROFIBUS PA can be found in Operating Instructions BA00034S "PROFIBUS DP/PA: Guidelines for planning and commissioning" and in the PNO Guideline.

- FOUNDATION Fieldbus
  - The Endress+Hauser devices meet the requirements of the FISCO model.
- Due to the low current consumption of 15,5 mA ± 1 mA, the following number of devices can be operated
  on one bus segment if installing as per FISCO:
  - up to 6 Cerabar S for Ex ia, CSA IS and FM IS applications
  - up to 24 Cerabar S for all other applications, e.g. in non-hazardous areas, Ex nA etc.

Further information on FOUNDATION Fieldbus, such as requirements for bus system components can be found in Operating Instructions BA00013S "FOUNDATION Fieldbus Overview".

# Input

Measured variable Absolute pressure and gauge pressure, from which level (level, volume or mass) is derived

- The MWP (maximum working pressure) for the measuring device depends on the lowest-rated element, with regard to pressure, of the selected components, i.e. the process connection ( $\rightarrow \stackrel{\square}{=} 35 \text{ ff}$ ) has to taken into consideration in addition to the measuring cell ( $\rightarrow$  see Table above). Also observe pressure-temperature dependency. For the appropriate standards and further information, see  $\rightarrow \stackrel{\square}{=} 34$ , "Pressure specifications" section.
- 2) OPL: over pressure limit depends on the lowest-rated element, with regard to pressure, of the selected components.
- 3) Version in the order code → see also → 🖹 82 ff, feature 40 "Sensor range; Sensor over pressure limit (= OPL)"
- 4) Turn down > 100:1 on request or can be set at the device

- The MWP (maximum working pressure) for the measuring device depends on the lowest-rated element, with regard to pressure, of the selected components, i.e. the process connection ( $\rightarrow \square$  35 ff) has to taken into consideration in addition to the measuring cell ( $\rightarrow$  see Table above). Also observe pressure-temperature dependency. For the appropriate standards and further information, see  $\rightarrow \square$  34, "Pressure specifications" section.
- 2) OPL: over pressure limit depends on the lowest-rated element, with regard to pressure, of the selected components.
- 3) The vacuum resistance applies for the measuring cell under reference operating conditions. The pressure and temperature application limits of the selected filling oil must also be observed for the PMP75. → 
  ☐ 77, "Filling oil" section.
- 4) Version in the order code  $\rightarrow$   $\stackrel{ all}{=}$  82 ff, feature 40 "Sensor range; Sensor over pressure limit (= OPL)"
- 5) Turn down > 100:1 on request or can be set at the device
- 6) PMP71 only, PMP75 on request

#### **Explanation of terms**

# Explanation of the terms "turn down (TD)", "set span" and "zero-based span"

#### Case 1:

■ Lower range value (LRV) | ≤ | Upper range value (URV) |

#### Example:

- Lower range value (LRV) = 0 bar
- Upper range value (URV) = 0.5 bar (7.5 psi)
- Nominal value (URL) = 1 bar (15 psi)

#### Turn down:

■ TD = URL / | URV | = 2:1

#### Set span:

■ URV – LRV = 0.5 bar (7.5 psi)
This span is based on the zero point.

#### Case 2:

■ | Lower range value (LRV) | ≤ | Upper range value (URV) |

#### Example:

- Lower range value (LRV) = 0 bar
- Upper range value (URV) = 0.5 bar (7.5 psi)
- Nominal value (URL) = 1 bar (15 psi)

#### Turn down:

■ TD = URL / | URV | = 2:1

#### Set span:

■ URV – LRV = 0.5 bar (7.5 psi)
This span is based on the zero point.

#### Case 3:

Lower range value (LRV) | ≥ | Upper range value (URV) |

#### Example:

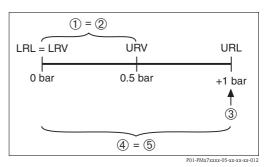

- Lower range value (LRV) = -0.6 bar (-9 psi)
- Upper range value (URV) = 0 bar
- Nominal value (URL) = 1 bar (15 psi)

#### Turn down:

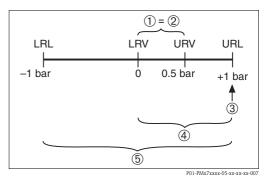

■ TD = URL / | LRV | = 1.67:1

#### Set span:

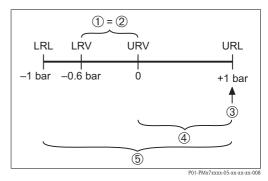

■ URV – LRV = 0.6 bar (9 psi)
This span is based on the zero point.

Example: 1 bar (15 psi) measuring cell

Example: 1 bar (15 psi) measuring cell

Example: 1 bar (15 psi) measuring cell

- 1 Set span
- 2 Zero-based span
- 4 Nominal measuring range
- 5 Sensor measuring range
- LRL Lower range limit
- URL Upper range limit
- LRV Lower range value
- URV Upper range value

# Output

#### Output signal

- 4 to 20 mA with superimposed digital communication protocol HART 5.0, 2-wire
- Digital communication signal PROFIBUS PA (Profile 3.0), 2-wire
  - signal coding: Manchester Bus Powered (MBP): Manchester II
  - data transmission rate: 31.25 KBit/s voltage mode
- Digital communication signal FOUNDATION Fieldbus, 2-wire
- signal coding: Manchester Bus Powered (MBP): Manchester II
- data transmission rate: 31.25 KBit/s voltage mode

# Signal range – 4 to 20 mA HART

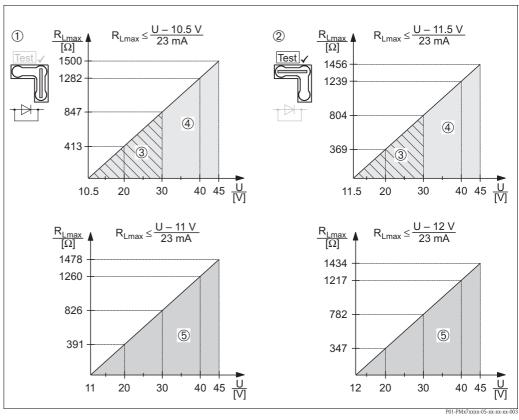

3.8 mA to 20.5 mA

#### Signal on alarm

As per NAMUR NE43

- 4 to 20 mA HART Options:
  - Max. alarm\*: can be set from 21 to 23 mA
  - Hold measured value: last measured value is held
  - Min. alarm: 3.6 mA
  - \* Factory setting: 22 mA
- PROFIBUS PA: can be set in the Analog Input block, Options: Last Valid Out Value (factory setting), Fail Safe Value, Status Bad
- FOUNDATION Fieldbus: can be set in the Analog Input block, Options: Last Good Value, Fail Safe Value (factory setting), Wrong Value

#### Load - 4 to 20 mA HART

Load diagram, observe the position of the jumper and the explosion protection ( $\rightarrow$  See also Page 20, "Measuring a 4 to 20 mA test signal" section.)

- 1 Jumper for 4 to 20 mA test signal set to "Non-test" position
- 2 Jumper for 4 to 20 mA test signal set to "Test" position
- 3 Power supply 10.5 (11.5) to 30 V DC for 1/2 G, 1 GD, 1/2 GD, FM IS, CSA IS, IECEx ia, NEPSI Ex ia
- 4 Power supply 10.5 (11.5) to 45 V DC for devices for non-hazardous areas, 1/2 D, 1/3 D, 2 G Ex d, 3 G Ex nA, FM XP, FM DIP, FM NI, CSA XP, CSA dust ignition proof, NEPSI Ex d
- 5 Power supply 11 (12) to 45 V DC for PMC71, Ex d[ia], NEPSI Ex d[ia]
- R<sub>I,max</sub> Maximum load resistance
- U Supply voltage

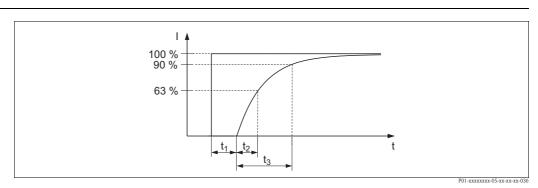

#### Note!

When operating via a handheld terminal or via a PC with an operating program, a minimum communication resistance of 250  $\Omega$  must exist within the loop.

#### Resolution

- Current output: 1 µA
- Display: can be set (factory setting: presentation of the maximum accuracy of the transmitter)

### Dead time, time constant

Presentation of the dead time and the time constant

# Dynamic behavior, current output

Туре		Measuring cell	Dead time (t <sub>1</sub> ) [ms]	Time constant T63 (t <sub>2</sub> ) [ms]	Time constant T90 (t <sub>3</sub> ) [ms]
PMC71	max.	all	90	120	276
PMP71	max.	■ 400 mbar (6 psi) ■ ≥ 1 bar (15 psi)	45	■ 70 ■ 35	■ 161 ■ 81
PMP75	max.	PMP71 + influence of the diaphragm seal			

#### Dynamic behavior, HART

A typical burst rate of 300 ms results in the following behavior:

Туре		Measuring cell	Dead time (t <sub>1</sub> ) [ms]	Time constant T63 (t <sub>2</sub> ) [ms]	Time constant T90 (t <sub>3</sub> ) [ms]
PMC71	min.	all	250	370	436
	max.		1050	1170	1236
PMP71	min.	■ 400 mbar (6 psi) ■ ≥ 1 bar (15 psi)	205	■ 275 ■ 240	■ 321 ■ 241
	max.	■ 400 mbar (6 psi) ■ ≥ 1 bar (15 psi)	1005	■ 1075 ■ 1040	■ 1121 ■ 1041
PMP75	max.	PMP71 + influence of the diaphragm seal			

#### Reading cycle

- Acyclic: max. 3/s, typical 1/s (depends on command # and number of preambles)
- Cyclic (Burst): max. 3/s, typical 2/s

The Device commands the BURST MODE function for cyclic value transmission via the HART communication protocol.

#### Cycle time (Update time)

Cyclic (Burst): min. 300 ms

#### Response time

- Acyclic: min. 330 ms, typical 590 ms (depends on command # and number of preambles)
- Cyclic (Burst): min. 160 ms, typical 350 ms (depends on command # and number of preambles)

# Dynamic behavior, PROFIBUS PA

A typical PLC cycle time of 1 s results in the following behavior:

Туре		Measuring cell	Dead time (t <sub>1</sub> ) [ms]	Time constant T63 (t <sub>2</sub> ) [ms]	Time constant T90 (t <sub>3</sub> ) [ms]
PMC71	min.	all	125	245	311
	max.		1325	1445	1511
PMP71	min.	■ 400 mbar (6 psi) ■ ≥ 1 bar (15 psi)	80	■ 150 ■ 115	■ 196 ■ 116
	max.	■ 400 mbar (6 psi) ■ ≥ 1 bar (15 psi)	1280	■ 1350 ■ 1315	■ 1396 ■ 1316
PMP75	max.	PMP71 + influence of the diaphragm seal			

#### Reading cycle (PLC)

- Cyclic: max. 30/s (dependent on the number and type of function blocks used in a closed-control loop)
- Acyclic: typical 25/s

#### Cycle time (update time)

min. 200 ms

The cycle time in a bus segment in cyclic data communication depends on the number of devices, on the segment coupler used and on the internal PLC cycle time. A new value can be determined up to 5 times per second.

#### Response time

- Cyclic: approx. 10 to 13 ms (depends on Min. Slave Interval)
- Acyclic: approx. 60 to 70 ms (depends on Min. Slave Interval)

# Dynamic behavior, FOUNDATION Fieldbus

A typical configuration for the macro cycle time (host system) of 1 s results in the following behavior:

Туре		Measuring cell	Dead time (t <sub>1</sub> ) [ms]	Time constant T63 (t <sub>2</sub> ) [ms]	Time constant T90 (t <sub>3</sub> ) [ms]
PMC71	min.	all	135	255	321
	max.		1135	1255	1321
PMP71	min.	<ul> <li>400 mbar (6 psi)</li> <li>≥ 1 bar (15 psi)</li> </ul>	90	■ 160 ■ 125	■ 206 ■ 126
	max.	<ul> <li>400 mbar (6 psi)</li> <li>≥ 1 bar (15 psi)</li> </ul>	1090	■ 1160 ■ 1125	■ 1206 ■ 1126
PMP75	max.	PMP71 + influence of the diaphragm seal			

#### Reading cycle

- Cyclic: max. 10/s (dependent on the number and type of function blocks used in a closed-control loop)
- Acyclic: typical 10/s

#### Cycle time (update time)

Cyclic: min. 100 ms

#### Response time

- Cyclic: max. 20 ms (for standard bus parameter settings)
- Acyclic: typical 100 ms (for standard bus parameter settings)

#### **Damping**

A damping affects all outputs (output signal, display).

- Via onsite display, handheld terminal or PC with operating program, continuous from 0 to 999 s
- Additionally for HART and PROFIBUS PA: via DIP switch on the electronic insert, switch position "on" = set value and "off"
- Factory setting: 2 s

### Transducer Blocks

Block	Content	Output values
TRD1 Block	Contains all parameters related to the measurement	<ul> <li>Pressure or level (channel 1)</li> <li>Process temperature (channel 2)</li> </ul>
Service Block	Contains service information	<ul> <li>Pressure after damping (channel 3)</li> <li>Pressure peakhold indicator (channel 4)</li> <li>Counter for max. pressure transgressions (channel 5)</li> </ul>
Diagnostic Block	Contains diagnostic information	Error code via DI channels (channel 0 to 16)
Display Block	Contains parameters to configure the onsite display	No output values

### Function blocks

Block	Content	Number	Execution time		Functionality	
		of blocks	Device Revision 6	Device Revision 7	Device Revision 6	Device Revision 7
Resource Block	The Resource Block contains all the data that uniquely identify the device. It is an electronic version of a nameplate of the device.	1			enhanced	
Analog Input Block 1 Analog Input Block 2	The AI Block receives the measuring data from the Sensor Block, (selectable via a channel number) and makes the data available to other function blocks at its output. Enhancement: digital outputs for process alarms, fail safe mode.	2	45 ms	45 ms <sup>1)</sup>	enhanced	
Digital Input Block	This block contains the discrete data of the Diagnose Block (selectable via a channel number 0 to 16) and provides them for other blocks at the output.	1	40 ms	30 ms	standard	enhanced
Digital Output Block	This block converts the discrete input and thus initiates an action (selectable via a channel number) in the DP Flow Block or in the Service Block. Channel 1 resets the counter for max. pressure transgressions.	1	60 ms	40 ms	standard	enhanced
PID Block	The PID Block serves as a proportional-integral-derivative controller and is used almost universally for closed-loop-control in the field including cascade and feedforward. Input IN can be indicated on the display. The selection is performed in the Display Block (DISPLAY_MAIN_LINE_CONTENT).	1	120 ms	70 ms	standard	enhanced
Arithmetic Block	This block is designed to permit simple use of popular measurement math functions. The user does not have to know how to write equations. The math algorithm is selected by name, chosen by the user for the function to be performed.	1	50 ms	40 ms	standard	enhanced
Input Selector Block	The Input Selector Block facilitates the selection of up to four inputs and generates an output based on the configured action. This block normally receives its inputs from AI Blocks. The block performs maximum, minimum, average and 'first good' signal selection. Inputs IN1 to IN4 can be indicated on the display. The selection is performed in the Display Block (DISPLAY_MAIN_LINE_CONTENT).	1	35 ms	35 ms	standard	enhanced
Signal Characterizer Block	The Signal Characterizer Block has two sections, each with an output that is a non-linear function of the respective input. The non-linear function is generated by a single look-up table with 21 arbitrary x-y pairs.	1	30 ms	40 ms	standard	enhanced
Integrator Block	The Integrator Block integrates a variable as a function of the time or accumulates the counts from a Pulse Input Block. The block may be used as a totalizer that counts up until reset or as a batch totalizer that has a setpoint, where the integrated or accumulated value is compared to pre-trip and trip settings, generating a binary signal when the setpoint is reached.	1	35 ms	40 ms	standard	enhanced
Analog Alarm Block	This block contains all process alarm conditions (working like a comparator) and represents them at the output.	1	35 ms	35 ms	standard	enhanced

#### Additional function block information:

Instantiate Function Block	YES	YES
Number of additional instantiate blocks	11	5

1) Without trend and alarm reports

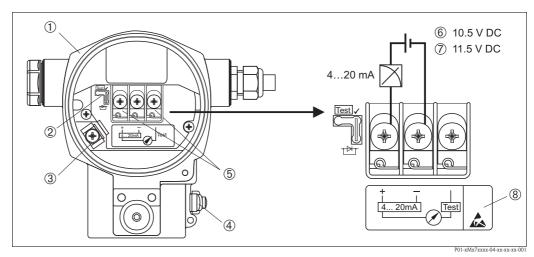

# Power supply

#### Electrical connection

#### Note

- When using the measuring device in hazardous areas, installation must comply with the corresponding national standards and regulations and the Safety Instructions or Installation or Control Drawings.  $\rightarrow$   $\stackrel{\triangle}{=}$  94 ff, "Safety Instructions" and "Installation/Control Drawings" sections.
- Devices with integrated overvoltage protection must be grounded.  $\rightarrow \stackrel{\triangle}{=} 32$ .
- Protective circuits against reverse polarity, HF influences and overvoltage peaks are installed.

#### 4 to 20 mA HART

Electrical connection 4 to 20 mA HART

- 1 Housing
- 2 Jumper for 4 to 20 mA test signal
  - $\rightarrow$   $\stackrel{\triangle}{=}$  20, "Measuring a 4 to 20 mA test signal" section.
- 3 Internal ground terminal
- 4 External ground terminal
- 5 4 to 20 mA test signal between positive and test terminal
- 6 Minimum supply voltage = 10.5 V DC, jumper is set as illustrated in the diagram.
- 7 Minimum supply voltage = 11.5 V DC, jumper is set to "Test" position.
- 8 Devices with integrated overvoltage protection are labeled OVP (overvoltage protection) here ( $\rightarrow \stackrel{\triangle}{=} 32$ ).

#### **PROFIBUS PA**

The digital communication signal is transmitted to the bus via a 2-wire connection. The bus also provides the power supply. For further information on the network structure and grounding, and for further bus system components such as bus cables, see the relevant documentation, e.g. Operating Instructions BA00034S "PROFIBUS DP/PA: Guidelines for planning and commissioning" and the PNO Guideline.

#### Cable specifications:

• Use a twisted, shielded two-wire cable, preferably cable type A

#### Note!

For further information on the cable specifications, see Operating Instructions BA00034S "PROFIBUS DP/PA: Guidelines for planning and commissioning", the PNO Guideline 2.092 PROFIBUS PA User and Installation Guideline" and IEC 61158-2 (MBP).

#### **FOUNDATION Fieldbus**

The digital communication signal is transmitted to the bus via a 2-wire connection. The bus also provides the power supply. For further information on the network structure and grounding and for further bus system components such as bus cables, see the relevant documentation, e.g. Operating Instructions BA00013S "FOUNDATION Fieldbus Overview" and the FOUNDATION Fieldbus Guideline.

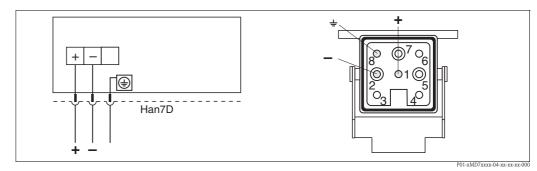

#### Cable specifications:

■ Use a twisted, shielded two-wire cable, preferably cable type A

#### Note

For further information on the cable specifications, see Operating Instructions BA00013S "FOUNDATION Fieldbus Overview", FOUNDATION Fieldbus Guideline and IEC 61158-2 (MBP).

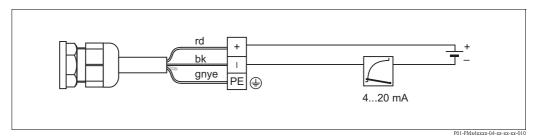

#### Devices with Harting plug Han7D

Left: electrical connection for devices with Harting plug Han7D Right: view of the plug connector at the device

Material: CuZn, gold-plated plug-in jack and plug

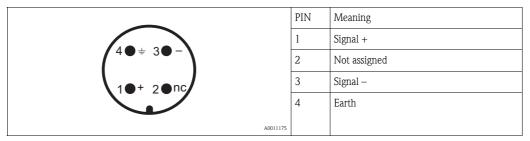

#### Connecting the cable version

rd = red, bk = black, gnye = green-yellow

#### Devices with M12 plug

PIN assignment for M12 connector

Endress+Hauser offers the following accessories for devices with an M12 plug:

Plug-in jack M 12x1, straight

- Material: body PA; slotted nut CuZn, nickel-plated
- Degree of protection (fully locked): IP67
- Order number: 52006263

Plug-in jack M 12x1, elbowed

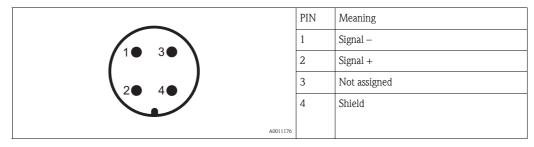

- Material: body PBT/PA; slotted nut GD-Zn, nickel-plated
- Degree of protection (fully locked): IP67
- Order number: 71114212

Cable 4x0.34 mm<sup>2</sup> (20 AWG) with M12 socket, elbowed, screw plug, length 5 m (16 ft)

- Material: body PUR; slotted nut CuSn/Ni; cable PVC
- Degree of protection (fully locked): IP67
- Order number: 52010285

#### Devices with 7/8" plug

PIN assignment for 7/8" connector

External thread: 7/8 - 16 UNC

- Material: housing / body CuZn, nickel-plated
- Protection: IP68

#### Cable gland

Approval	Туре	Clamping area
Standard, II1/2G Exia, IS	Plastic M20x1.5	5 to 10 mm (0.2 to 0.39 in)
ATEX II1/2D, II1/3D, II1/2GD Exia, II1GD Exia, II3G Ex nA	Metal M20x1.5 (Ex e)	7 to 10.5 mm (0.28 to 0.41 in)

#### **Terminals**

For wire cross-sections of 0.5 to 2.5 mm<sup>2</sup> (20 to 14 AWG)

#### Measuring a 4 to 20 mA test signal

A 4 to 20 mA test signal may be measured via the positive and test terminal without interrupting the measurement. The minimum supply voltage of the device can be reduced by simply changing the position of the jumper. As a result, operation is also possible with lower voltage sources. Observe the position of the jumper in accordance with the following table.

Jumper position for test signal	Description
Test 🗸	<ul> <li>Measuring 4 to 20 mA test signal via the plus and test terminal: possible. (Thus, the output current can be measured without interruption via the diode.)</li> <li>Delivery status</li> <li>Minimum supply voltage: 11.5 V DC</li> </ul>
Test V	<ul> <li>Measuring 4 to 20 mA test signal via the plus and test terminal: not possible.</li> <li>Minimum supply voltage: 10.5 V DC</li> </ul>

## Supply voltage

#### Note!

- When using the measuring device in hazardous areas, installation must comply with the corresponding national standards and regulations and the Safety Instructions or Installation or Control Drawings.

### 4 to 20 mA HART

Version	Jumper for 4 to 20 mA test signal	Supply voltage
non-hazardous areas	in "Test" position	11.545 V DC
	in "Non-test" position	10.545 V DC
Intrinsically safe	in "Test" position	11.5 30 V DC
	in "Non-test" position	10.5 30 V DC
Other types of protection	in "Test" position	11.5 45 V DC (Versions with plug-in connection 35 V DC)
<ul> <li>Devices without certificate</li> </ul>	in "Non-test" position	10.5 45 V DC (Versions with plug-in connection 35 V DC)

Influence of power supply	< 0.0006% of URL/1 V

# Performance characteristics – general

# Reference operating conditions

- As per IEC 60770
- Ambient temperature  $T_U$  = constant, in the range of: +21 to +33 °C (+70 to 91 °F)
- Humidity  $\varphi$  = constant, in the range of: 5 to 80 % rH
- Ambient pressure  $p_A$  = constant, in the range of: 860 to 1060 mbar (12.47 to 15.37 psi)
- Position of the measuring cell = constant, in range: horizontally  $\pm 1^{\circ}$
- Input of LOW SENSOR TRIM and HIGH SENSOR TRIM for lower range value and upper range value
- Zero based span
- Material of process isolating diaphragm PMC71: Al<sub>2</sub>O<sub>3</sub> (aluminum oxide ceramic)
- Material of process isolating diaphragm PMP71 and PMP75: AISI 316L/1.4435
- Filling oil PMP71 and PMP75: silicone oil
- Supply voltage: 24 V DC ± 3 V DC
- Load with HART: 250  $\Omega$

# Uncertainty of measurement for small absolute pressure ranges

The smallest extended uncertainty of measurement that can be returned by our standards is:

- 0.4% of the measured value in the range 1 to 30 mbar (0.0145 to 0.435 psi)
- 1% of the measured value in the range < 1 mbar (0.0145 psi)

#### Long-term stability

#### PMC71/PMP75:

■ For measuring ranges  $\geq$  1 bar (15 psi):  $\pm$  0.05 % of URL/year

#### PMC71

- 100 mbar to 40 bar (1.5 psi to 600 psi): ±0.2 % of URL/10 years
- 100 mbar to 40 bar (1.5 psi to 600 psi) (absolute pressure sensor): ±0.3 % of URL/10 years

#### PMP71 gauge pressure sensors:

	1 year	5 years	10 year
Measuring ranges [bar (psi)]		% of URL	
1 (15)	±0.020	±0.080	±0.180
10 (150)	±0.025	±0.050	±0.075
40 (600)	±0.025	±0.075	±0.100
100 (1500)	±0.050	±0.150	±0.200
400 (6000)	±0.050	_	±1

# Influence of the installation position

- PMC71 ¹: ≤ 0.18 mbar (3 psi)
- PMP71 1,2
  - Process connections thread G 1 A, G 1 1/2, G 2, 1 1/2 MNPT, 2 MNPT, M 44x1,25, EN/DIN, ANSI and JIS flanges: ≤ 10 mbar (0.15 psi)
  - Process connections thread: G 1/2, 1/2 MNPT, JIS G 1/2, JIS R 1/2, M20x1.5:  $\leq$  4 mbar (0.06 psi)
- 1) Device rotated 180°, process connection pointing upwards.
- 2) The value is doubled for devices with inert oil.

#### Note:

Different tightening torques (e.g. for Clamp or Varivent connections) can merely cause a shift in the zero point. This effect is corrected by position adjustment during commissioning.

# Performance characteristics – ceramic process isolating diaphragm

#### Reference accuracy - PMC71

The reference accuracy comprises the non-linearity (terminal based), hysteresis and non-reproducibility as per IEC 60770. The data refer to the calibrated span.

Measuring cell	Gauge press	ure sensor	Absolute pres	sure sensor
100 mbar (1.5 psi)	■ TD 1:1 to TD 10:1 ■ TD > 10:1		■ TD 1:1 to TD 5:1 ■ TD > 5:1

# Operating conditions (Installation)

# General installation instructions

- For PMP75: See  $\rightarrow \stackrel{\triangle}{=} 77$ , "Installation instructions" section.
- The position-dependent zero point shift can be corrected directly at the device via operating keys, and also in hazardous areas in the case of devices with external operation. Diaphragm seals also shift the zero point, depending on the installation position
  - $(\rightarrow$  See also  $\rightarrow \stackrel{\triangle}{=} 77$ , "Installation instructions" section).
- The housing of the Cerabar S can be rotated 380°. See  $\rightarrow \stackrel{\triangle}{=} 29$ , "Turning the housing" section.
- Endress+Hauser offers a mounting bracket for installing the device on pipes or walls.
  - $\rightarrow$  See also  $\rightarrow \stackrel{\triangle}{=} 28$ , "Wall and pipe-mounting" section.
- Use flushing rings for flange and cell diaphragm seals if buildup or clogging can be expected at the diaphragm seal connection. The flushing ring can be fitted between the process connection and diaphragm seal. Material buildup in front of the process isolating diaphragm can be flushed away, and the pressure chamber vented, via the two lateral flushing holes.

# Measuring arrangement for devices without diaphragm seals – PMC71, PMP71

Cerabar S transmitters without diaphragm seals are mounted as per the norms for a manometer (DIN EN 837-2). We recommend the use of shutoff devices and siphons. The orientation depends on the measuring application.

#### Pressure measurement in gases

Mount Cerabar S with shutoff device above the tapping point so that any condensate can flow into the process.

#### Pressure measurement in steams

- Mount Cerabar S with siphon above the tapping point.

  The siphon reduces the temperature to almost the ambient temperature.
- Fill the siphon with liquid before commissioning.

#### Pressure measurement in liquids

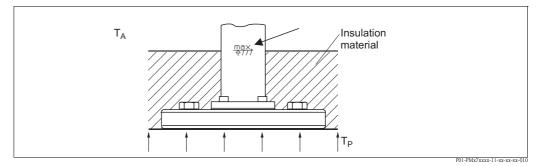

• Mount Cerabar S with shutoff device below or at the same level as the tapping point.

#### Level measurement

- Mount Cerabar S below the lowest measuring point.
- Do not mount the device at the following positions:
   In the filling curtain, in the tank outlet or at a point in the container which could be affected by pressure pulses from an agitator or a pump.
- The adjustment and functional test can be carried out more easily if you mount the device downstream of a shutoff device.

#### Heat insulation – PMC71 hightemperature version

The PMC71 high-temperature version must only be insulated up to a certain height. The maximum permitted insulation height is indicated on the devices and applies to an insulation material with a heat conductivity  $\leq 0.04 \text{ W/(m x K)}$  and to the maximum permitted ambient and process temperature ( $\rightarrow$  see table below). The data were determined under the most critical application "quiescent air".

Maximum insulation height, here indicated on a PMC71 with a flange

	PMC71 high-temperature version
Ambient temperature (T <sub>A</sub> )	≤ 70 °C (158 °F)
Process temperature (T <sub>P</sub> )	≤ 150 °C (302 °F)

# Measuring arrangement for devices with diaphragm seals – PMP75

■ See  $\rightarrow$   $\stackrel{\triangle}{=}$  75, "Planning instructions, diaphragm seal systems" section.

#### Wall and pipe-mounting

Endress+Hauser offers a mounting bracket for installing the device on pipes or walls. See also  $\rightarrow \stackrel{\triangle}{=} 82$  ff, feature 110, "Additional option 2" or separate accessory (part number: 71102216). For the dimensions, see  $\rightarrow \stackrel{\triangle}{=} 65$ .

#### "Separate housing" version

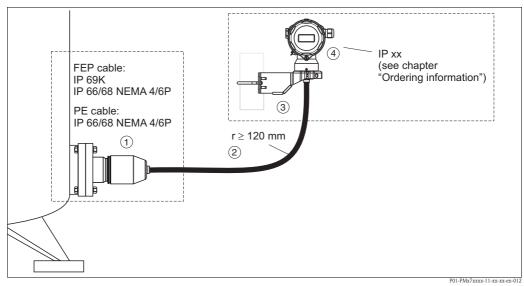

With the "separate housing" version, you are able to mount the housing with the electronics insert at a distance from the measuring point. This version facilitates trouble-free measurement:

- Under particularly difficult measuring conditions (at installation locations that are cramped or difficult to access)
- If rapid cleaning of the measuring point is required
- If the measuring point is exposed to vibrations
- For compact installations

You can choose between different cable versions:

- PE (2 m (6.6 ft), 5 m (16 ft) and 10 m (33 ft))
- FEP (5 m (16 ft)).
- $\rightarrow$   $\stackrel{\triangleright}{=}$  85 ff, feature 110, "Additional option 2", version "G".

For the dimensions,  $\rightarrow \stackrel{\triangle}{=} 65$ .

In the case of the "separate housing" version, the sensor is delivered with the process connection and cable ready mounted. The housing and a mounting bracket are enclosed as separate units. The cable is provided with a socket at both ends. These sockets are simply connected to the housing and the sensor.

- 1 Process connection with sensor
- 2 Cable, both ends are fitted with a socket
- 3 Mounting bracket provided, suitable for pipe and wall mounting
- 4 Housing with electronic insert

Degree of protection for the process connection and sensor with the use of

- FEP cable:
  - IP 69K
  - IP 66 NEMA 4/6P
  - IP 68 (1.83 mH<sub>2</sub>O for 24 h) NEMA 4/6P
- PE cable:
  - IP 66 NEMA 4/6P
  - IP 68 (1.83 mH<sub>2</sub>O for 24 h) NEMA 4/6P

Technical data of the PE and FEP cable:

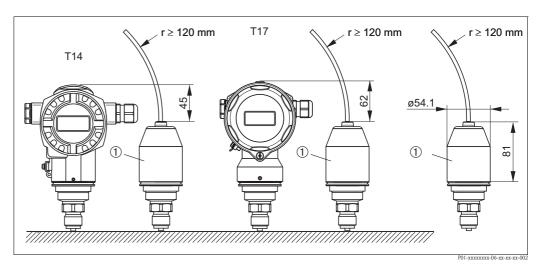

- Minimum bending radius: 120 mm (4.72 in)
- Cable extraction force: max. 450 N (101 lbf)
- Resistance to UV light

Use in hazardous area:

- Intrinsically safe installations (Ex ia/IS)
- FM/CSA IS: for Div. 1 installation only

#### Reduction of the installation height

If the separate housing is used, the installation height of the process connection is reduced compared to the dimensions of the standard version.

Reduction of the installation height of the process connection when using the separate housing.

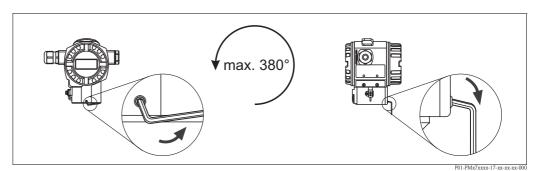

1 Process connection adapter.

### Turning the housing

The housing can be rotated  $380^{\circ}$  by loosening the Allen screw.

#### Your benefits

- Simple mounting by optimally aligning the housing
- Good, accessible device operation
- Optimum readability of the onsite display (optional).

Aligning the housing by releasing the setscrew T14 housing: 2 mm (0.08 in) Allen screw; T17 housing: 3 mm (0.12 in) Allen screw

#### Oxygen applications

Oxygen and other gases can react explosively to oils, grease and plastics, such that, among other things, the following precautions must be taken:

- All components of the system, such as measuring devices, must be cleaned in accordance with the BAM (DIN 19247) requirements.
- Dependent on the materials used, a certain maximum temperature and a maximum pressure for oxygen applications must not be exceeded.

The devices suitable for gaseous oxygen applications are listed in the following table with the specification  $p_{max}$ .

Order code for devices 1) cleaned for oxygen applications	p <sub>max</sub> for oxygen applications	T <sub>max</sub> for oxygen applications
PMC71 - * * * * * * * 2 * *,  Devices with sensors, nominal value < 10 bar (150 psi)	Over pressure limit (OPL) of sensor <sup>2], 3]</sup>	60 °C (140 °F)
PMC71 – * * * * * * * * 2 * *, Devices with sensors, nominal value $\geq$ 10 bar (150 psi)	30 bar (450 psi)	60 °C (140 °F)
PMP71 - * * * * * * * * N * *	Dependent on the lowest-rated element, with regard to pressure, of the selected components: over pressure limit (OPL) of the sensor <sup>1)</sup> , process connection (1.5 x PN) or fill fluid (160 bar (2400 psi))	85 °C (185 °F)
PMP75 - * * * * * * * * * N * *	Dependent on the lowest-rated element, with regard to pressure, of the selected components: over pressure limit (OPL) of the sensor <sup>1)</sup> , process connection (1.5 x PN) or fill fluid (160 bar (2400 psi))	85 °C (185 °F)

- 1) Only devices, not accessories or enclosed accessories.
- 2) → 🖹 82 ff "Ordering information", feature 40 "Sensor range; Sensor over pressure limit (= OPL)
- 3) PMC71 with PVDF thread or flange: Only mount with a mounting bracket. MWP 10 bar (150 psi), OPL max. 15 bar (225 psi). Process temperature range -10...+60 °C (+14...+140 °F) Max.: 15 bar (225 psi), -10 to +60 °C (+14 to +140 °F)

#### Silicone-free applications

Special cleaning of the transmitter to remove paint-wetting substances, for use in paint shops  $\rightarrow \triangleq$  84 "Ordering information PMC71", feature 80 "Seal", version "L" and "M".

#### Ultrapure gas applications

Endress+Hauser also offers devices for special applications, such as ultrapure gas, cleaned from oil and grease. No special restrictions regarding the process conditions apply to these devices.

 $\rightarrow$   $\stackrel{\triangle}{=}$  82, "Ordering information PMC71", feature 80 "Seal" or  $\rightarrow$   $\stackrel{\triangle}{=}$  88, "Ordering information PMP71", feature 90 "Fill fluid".

#### Applications with hydrogen

With regard to materials in which hydrogen formation takes place, hydrogen atoms can diffuse through the metallic process isolating diaphragm. This can result in incorrect measurement results. Endress+Hauser offers process isolating diaphragms with gold-rhodium coating for this application.

 $\rightarrow$   $\stackrel{\triangle}{=}$  86 "Ordering information PMP71" and  $\rightarrow$   $\stackrel{\triangle}{=}$  89 "Ordering information PMP75", feature 60 "Membrane material" version "6".

# **Operating conditions (Environment)**

#### Ambient temperature range

Version	PMC71 high-temperature version	PMC71	PMP71 1)	PMP75 <sup>1)</sup>
Without LCD display		-40 to	o +85 °C (-40 to +1	85 °F)
With LCD display 2)	-20 to +70 °C (-4 to +158 °F)	−20 to +70 °C (-4 to +158 °F)		
With M12 connector, elbowed		-25 to +85 °C (-13 to +185 °F)		
With separate housing	-20 to +50 °C (-4 to +122 °F) (installation without insulation)			
Diaphragm seal systems	_	_	_	→ 🖹 75
MID parts certificate	_	_	-25 to +55 °C (-13 to +131 °F)	_

- 1) Lower temperatures on request
- 2) Extended temperature application range (-40 °C to +85 °C (-40 °F to +185 °F)) with restrictions in optical properties such as display speed and contrast

#### Note!

For high-temperature applications, either a PMP75 with a temperature isolator or with a capillary can be used. If vibrations also occur in the application, Endress+Hauser recommends using a PMP75 with a capillary. If a PMP75 with a temperature isolator or capillary is used, we recommend a suitable retaining unit for mounting (see "Wall and pipe-mounting" section on  $\rightarrow \boxed{28}$ ).

For devices for use in hazardous areas, see Safety Instructions, Installation or Control Drawing. ( $\rightarrow \stackrel{\cong}{}$  94 ff, "Safety Instructions" and "Installation/Control Drawings" sections)

#### Storage temperature range

- -40 to +90 °C (-40 to +194 °F)
- Onsite display: -40 to +85 °C (-40 to +185 °F)
- Separate housing: -40 to +60 °C (-40 to +140 °F)

#### Degree of protection

- $\blacksquare$   $\rightarrow$  See Page 82 ff, feature 30 "Housing; Cable entry; Protection".
- Degree of protection IP 68 for T17 housing: 1.83 mH<sub>2</sub>O for 24 h
- Separate housing  $\rightarrow$   $\stackrel{\triangle}{=}$  28

#### Climate class

Class 4K4H (air temperature: -20 to +55 °C (-4 to +131 °F), relative humidity: 4 to 100 %) fulfilled as per DIN EN 60721-3-4 (condensation possible. With PMC71, avoid condensate in the device).

#### Vibration resistance

Device/accessory	Test standard	Vibration resistance
PMC71 1)	GL	Guaranteed for
PMP71		3 to 25 Hz: ±1.6 mm (0.063 in); 25 to 100 Hz: 4 g in all 3 planes
PMP75 <sup>2), 3)</sup>		
With mounting bracket	IEC 61298-3	Guaranteed for 10 to 60 Hz: ±0.15 mm (0.0059 in); 60 to 500 Hz: 2 g in all 3 planes
PMP71 with MID parts certificate	OIML R117-1	Class M3

- 1) Not for high-temperature version with Ex d[ia], CSA XP or FM XP
- 2) With aluminum T14 housing only
- 3) For high-temperature applications, either a PMP75 with a temperature isolator or with a capillary can be used. If vibrations also occur in the application, Endress+Hauser recommends using a PMP75 with a capillary. If a PMP75 with a temperature isolator or capillary is used, it must be mounted with a mounting bracket (→ ≧ 28).

#### Electromagnetic compatibility

- Electromagnetic compatibility to EN 61326 and NAMUR recommendation EMC (NE21). For details refer to the Declaration of Conformity.
- With enhanced immunity against electromagnetic fields as per EN 61000-4-3: 30 V/m with closed cover <sup>1</sup>
- Maximum deviation: < 0.5 % of span
- All EMC measurements were performed with a turn down (TD) = 2:1.
- Class E3 as per OIML R75-2
- 1) For devices with T14 housing

# Overvoltage protection (optional)

- Overvoltage protection:
  - Nominal functioning DC voltage: 600 V
  - Nominal discharge current: 10 kA
- Surge current check  $\hat{i} = 20$  kA as per DIN EN 60079-14: 8/20  $\mu$ s satisfied
- Arrester AC current check I = 10 A satisfied
- $\rightarrow$   $\stackrel{\triangle}{=}$  82 ff, feature 100 "Additional option 1" and feature 110 "Additional option 2", version "M Overvoltage protection".

Note!

Devices with integrated overvoltage protection must be grounded.

# Operating conditions (Process)

#### Process temperature limits

#### PMC71 (with ceramic process isolating diaphragm)

- -25 to +125 °C (-13 to +257 °F)
- High-temperature version: -20 to +150 °C (-4 to +302 °F);  $\rightarrow \blacksquare$  82, feature 100 "Additional option 1", version "T".
- With applications involving saturated steam, a Cerabar S with a metallic process isolating diaphragm must be used, or a siphon for temperature isolation should be provided during installation.
- Observe the process temperature range of the seal in the following table.

Versions for feature 80 in the order code	Seal	Process temperature range
A, L	FKM Viton	-25 to +125 °C/150 °C (-13 to +257 °F/302 °F) <sup>1)</sup>
B <sup>2)</sup>	EPDM (FDA 21 CFR177.2600; 3A Class II; USP Class VI) DVGW (KTW, W270, W534), WRAS, ACS, NSF61	-20 to +125 °C/150 °C (-4 to +257 °F/302 °F) <sup>1)</sup>
В	EPDM	-20 to +150 °C (-4 to +302 °F)
D, M	Kalrez, Compound 4079	+5 to +125 °C/150 °C (+41 to +257 °F/302 °F) 1)
Е	Chemraz, Compound 505	-10 to +125 °C/150 °C (+14 to +257 °F/302 °F) <sup>1)</sup>
F <sup>2)</sup>	HNBR (FDA 21CFR177.2600; 3A Class II; KTW; AFNOR; BAM)	−25 to +125 °C (−13 to +257 °F
F	NBR	-10 to +100 °C (+14 to +212 °F)
G	FKM Viton, FDA 21CFR177.2600	−5 to +125 °C (+23 to +257 °F)
1	FKM Viton, cleaned from oil and grease	-10 to +125 °C/150 °C (14 to +257 °F/302 °F) 1)
2	FKM Viton, cleaned for oxygen service	-10 to +60 °C (+14 to +140 °F)
	l	

The process temperature ranges specified here refer to permanent application of the PMC71. They may be exceeded for a short time (e.g. for cleaning).

- 1) 150 °C (302 °F): for high-temperature version
- 2) These seals are used for devices with 3A-approved process connections.

#### Applications with jumps in temperature

Extreme jumps in temperature can result in temporary measuring errors. Temperature compensation takes effect after several minutes. Internal temperature compensation is faster the smaller the jump in temperature and the longer the time interval involved.

For further information please contact your local Endress+Hauser Sales Center.

#### PMP71 (with metallic process isolating diaphragm)

Description	Temperature operating range
Process connections with internal process isolating diaphragm	-40 to +125 °C (-40 to +257 °F) (+150 °C (302 °F) for max. one hour)
Process connections with flush-mounted process isolating diaphragm, G 1 A, G 1 1/2 A, G 2 A, 1 NPT, 1 1/2 NPT, 2 NPT, M 44 x 1.25, EN/DIN, ANSI and JIS flanges	-40 to +100 °C (-40 to +212 °F)
Process connections with flush-mounted process isolating diaphragm, G $1/2$ A, M20x1.5	–20 to +85 °C (-4 to 185 °F)

#### PMP71 (with metallic process isolating diaphragm) with MID parts certificate

-25 to +55 °C (-13 to +131 °F)

#### PMP75 (with diaphragm seal)

■ Depending on the diaphragm seal and filling oil from -70 °C (-94 °F) to +400 °C (+752 °F). Observe the temperature application limits → 

75.

#### Note!

- The PTFE foil used is designed to protect the unit against abrasion. It does not provide protection against corrosive media.
- Do not use diaphragm seals with 0.25 mm (0.01 in) PTFE foil on AISI 316L (1.4435/1.4404) for vacuum applications, upper temperature limit +204 °C (+399 °F).
- For oxygen applications, observe  $\rightarrow \stackrel{\triangle}{=} 30$ , "Oxygen applications" section.

#### Pressure specifications

The maximum pressure for the measuring device depends on the lowest-rated element with regard to pressure.

See the following sections:

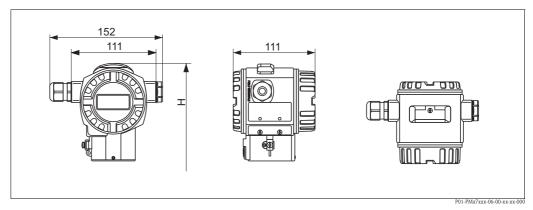

- $\rightarrow \stackrel{\triangle}{1}$  7 ff, "Measuring range" section
- "Mechanical construction" section.

The MWP (maximum working pressure) is specified on the nameplate. This value refers to a reference temperature of  $20^{\circ}$ C ( $68^{\circ}$ F), or  $100^{\circ}$ F ( $38^{\circ}$ C) for ANSI flanges, and may be applied to the device for an unlimited time. Observe the temperature dependency of the MWP.

- The pressure values permitted at higher temperatures can be found in the following standards:
  - EN 1092-1: 2001 Tab. 18 <sup>1</sup>
  - ASME B 16.5a 1998 Tab. 2-2.2 F316
  - ASME B 16.5a 1998 Tab. 2.3.8 N10276
  - IIS B 2220
- The test pressure corresponds to the over pressure limit of the device  $(OPL = 1.5 \times MWP^2)$  and may be applied for only a limited time period in order to avoid permanent damage.
- The Pressure Equipment Directive (EC Directive 97/23/EC) uses the abbreviation "PS". The abbreviation "PS" corresponds to the MWP (maximum working pressure) of the measuring device.
- In the case of sensor range and process connections where the over pressure limit (OPL) of the process connection is smaller than the nominal value of the sensor, the device is set at the factory, at the very maximum, to the OPL value of the process connection. If you want to use the entire sensor range, select a process connection with a higher OPL value (1.5 x PN; MWP = PN).
- In oxygen applications, the values for " $p_{max}$  and  $T_{max}$  for oxygen applications" as per  $\rightarrow \stackrel{ ext{l}}{\Rightarrow} 30$ , "Oxygen applications" may not be exceeded.
- 1) With regard to their stability-temperature property, the materials 1.4435 and 1.4404 are grouped together under 13EO in EN 1092-1: 2001 Tab. 18. The chemical composition of the two materials can be identical.
- 2) The equation does not apply for PMP71 and PMP75 with a 40 bar (600 psi) or 100 bar (1500 psi) measuring cell.

The roughness of the surface in contact with the media, including the raised face of the flanges (all standards) made of Alloy C, Monel or tantalum, is Ra 0.8  $\mu m$  (31.5  $\mu in$ ). Lower surface roughness on request.

2)

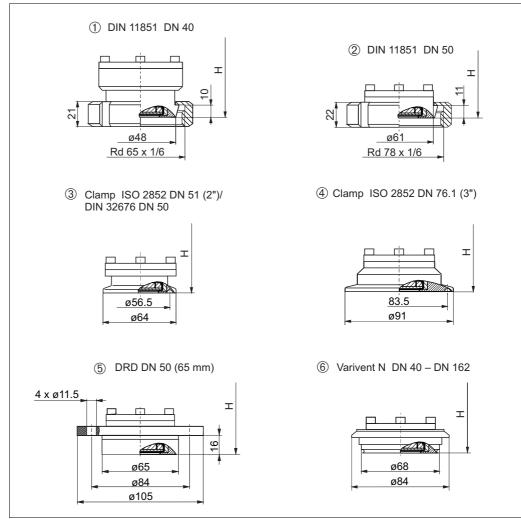

## Installation height H for devices with flange

Description	T14 housing	T17 housing
PMC71	215 mm (8.46 in)	231 mm (9.09 in)
PMC71 with Ex d[ia], CSA XP or FM XP	280 mm (11 in)	296 mm (11.7 in)

**Process connections PMC71** (with ceramic process isolating diaphragm) (continued)

### Hygienic connections, flush-mounted process isolating diaphragm

Many process connections with an EPDM or HNBR seal are approved for the PMC71 in accordance with the guidelines of the 3A Sanitary Standard. To ensure that the 3A approval is valid for the PMC71 version, a 3A-approved process connection together with an EPDM or HNBR seal must be selected when ordering → 🖹 84 "Ordering information PMC71", feature 80 "Seal", version B or F.

Process connections PMC71, hygienic connections, material AISI 316L Surface roughness of the surfaces in contact with the media  $R_s \le 0.8 \,\mu\text{m}$  (31.5  $\mu$ in) as standard. Lower surface roughness on request.

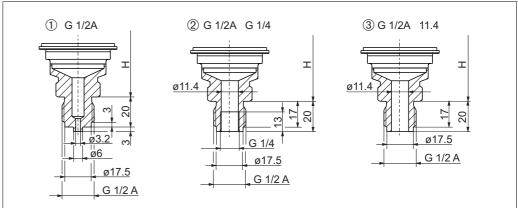

- Version MP: DIN 11851 DN 40 PN 25, 3A with HNBR or EPDM seal
- Version MR: DIN 11851 DN 50 PN 25, 3A with HNBR or EPDM seal 2
- Version TD: Tri-Clamp ISO 2852 (2"), DIN 32675 DN 50, 3A with HNBR or EPDM seal Version TF: Tri-Clamp ISO 2852 (3"), 3A with HNBR or EPDM seal 3
- 4
- 5 Version TK: DRD DN 50 (65 mm) PN 25, 3A with HNBR or EPDM seal
- Version TR: Varivent type N for pipes 40 162, PN 40, 3A with HNBR or EPDM seal

# Process connections PMP75 (with diaphragm seal)

#### Note!

- The weights of the diaphragm seals are given in the tables. See  $\rightarrow \stackrel{ ext{$=$}}{ ext{$=$}}$  65 for the weight of the housing.
- The following drawings are drawings that illustrate how the system works in principle. In other words, the dimensions of a diaphragm seal supplied can deviate from the dimensions given in this document.
- With the use of high-temperature oils the design can deviate strongly.
- Observe the information in the "Planning instructions, diaphragm seal systems" section  $\rightarrow \stackrel{\text{le}}{\rightarrow} 75 \text{ ff.}$
- For further information please contact your local Endress+Hauser Sales Center.

# Filling oil

See "Ordering information" (  $\rightarrow$   $\stackrel{ }{ }$  82)

### Miscellaneous:

- Diaphragm seal capillary: AISI 316 Ti (1.4571)
   Protective hose for diaphragm seal capillary: AISI 304 (1.4301)

### Material (wetted)

Note!

Process-wetted device components are listed in the "Mechanical construction" ( $\rightarrow \stackrel{\triangle}{=} 35$ ) and "Ordering information" ( $\rightarrow \stackrel{\triangle}{=} 82$ ) sections.

#### TSE Certificate of Suitability (Transmissible Spongiform Encephalopathy)

The following applies to all process wetted device components:

- They do not contain any materials derived from animals.
- No additives or operating materials derived from animals are used in production or processing.

### **Process connections**

- "Clamp connections" and "Hygienic connections" (see also "Ordering information" section): AISI 316L (DIN/EN material number 1.4435)
- Endress+Hauser supplies process connections with threaded connections and DIN/ EN flanges made of stainless steel as per AISI 316L (DIN/EN material number 1.4404 (AISI 316) or 14435). With regard to their stability-temperature property, the materials 1.4404 and 1.4435 are grouped together under 13E0 in EN 1092-1 Tab.18. The chemical composition of the two materials can be identical.
- Some process connections are also available in the material Alloy C276 (DIN/EN material number 2.4819).
   See the information in the "Mechanical construction" section.

### Process isolating diaphragm

- PMC71:  $Al_2O_3$  aluminum oxide ceramic (FDA 21CFR186.1256, USP Class VI), ultrapure 99.9 % ( $\rightarrow$  see also www.endress.com/ceraphire)
- PMP71:
  - AISI 316L (DIN/EN material number 1.4435)
  - AISI 316L with gold-rhodium coating
  - Alloy C276 (DIN/EN material number 2.4819)
- PMP75:
  - AISI 316L (DIN/EN material number 1.4435)
  - AISI 316L with gold-rhodium coating
  - AISI 316L with 0.25 mm PTFE foil (not for vacuum applications)
  - Alloy C276 (DIN/EN material number 2.4819)
  - Monel
  - Tantalum

### Seals

See ordering information,  $\rightarrow \stackrel{\triangle}{=} 82 \text{ ff}$ 

# Human interface

### Operating elements

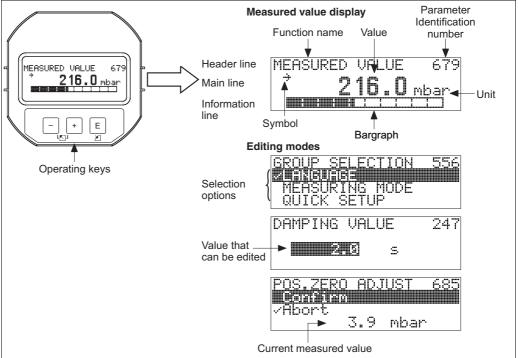

### Onsite display (optional)

A 4-line liquid crystal display (LCD) is used for display and operation. The onsite display shows measured values, dialog text as well as fault and notice messages in plain text, thereby supporting the user in every stage of operation. The display of the device can be turned in  $90^{\circ}$  steps.

Depending on the installation position of the device, this makes it easy to operate the device and read the measured value.

#### Functions:

- 8-digit measured value display including sign and decimal point, bar graph for
  - 4 to 20 mA HART as current display
  - PROFIBUS PA as graphic display of the standardized value of the AI Block
  - FOUNDATION Fieldbus as graphic display of the transducer output.
- Simple and complete menu guidance thanks to separation of the parameters into several levels and groups.
- Menu guidance up to 8 languages
- Each parameter is given a 3-digit ID number for easy navigation.
- Option for configuring the display according to individual requirements and preferences, such as language, alternating display, display of other measured values such as sensor temperature, contrast setting.
- Comprehensive diagnostic functions (fault and warning message, peak-hold indicators, etc.).
- Rapid and safe commissioning with the Quick Setup menus.

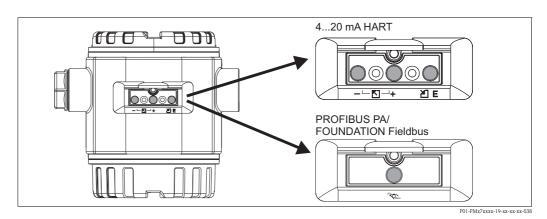

P01-xxxxxxxx-07-xx-xx-en-0

### Operating elements

### Operating keys on the exterior of the device

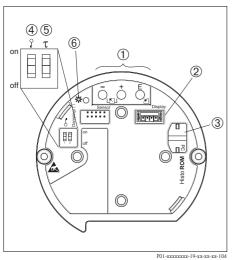

With the T14 housing (aluminum or stainless steel), the operating keys are located either outside of the housing, under the protection cap or inside on the electronic insert. With the T17 housing (stainless steel), the operating keys are located inside the housing on the electronic insert.

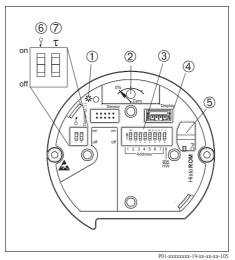

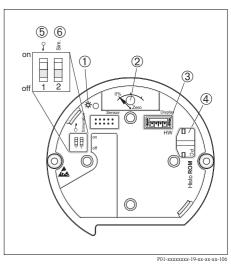

The operating keys located externally on the device work on the Hall sensor principle. As a result, no additional openings are required in the device. This guarantees:

- Complete protection against environmental influences such as moisture and contamination.
- Simple operation without any tools.
- No wear.

### Operating keys and elements located internally on the electronic insert

Electronic insert HART

- 1 Operating keys
- 2 Slot for optional display
- 3 Slot for optional HistoROM®/M-DAT
- 4 DIP-switch for locking/unlocking parameters relevant to the measured values
- 5 DIP-switch for damping on/off
- 6 Green LED to indicate value being accepted

### Electronic insert PROFIBUS PA

- 1 Green LED to indicate value being accepted
- 2 Key for position adjustment and device reset
- 3 DIP-switch for bus address
- 4 Slot for optional display
- 5 Slot for optional HistoROM®/M-DAT
- DIP-switch for locking/unlocking
- parameters relevant to the measured values
- 7 DIP-switch for damping on/off

# Electronic insert FOUNDATION Fieldbus

- Green LED to indicate value being accepted
- 2 Key for position adjustment and device reset
- 3 Slot for optional display
- 4 Slot for optional HistoROM®/M-DAT
- 5 DIP-switch for locking/unlocking parameters relevant to the measured values
  - DIP-switch for simulation mode on/off

#### Remote operation

Depending on the position of the write protection switch on the device, all software parameters are accessible.

#### **HART**

Remote operation via:

- Field Xpert SFX100 (see "Hardware and software for onsite and remote operation" section  $\rightarrow \stackrel{\triangle}{=} 73$ )

### PROFIBUS PA

Remote operation via:

- FieldCare (see "Hardware and software for onsite and remote operation" section  $\rightarrow \stackrel{\triangle}{=} 73 \text{ ff}$ )
  - Profiboard: For connecting a PC to PROFIBUS
  - Proficard: For connecting a laptop to PROFIBUS

### **FOUNDATION Fieldbus**

Remote operation via:

- $\blacksquare$  Use an FF-configuration program for example NI-FBUS Configurator, to
  - connect devices with "FOUNDATION Fieldbus signal" into an FF-network
  - set FF-specific parameters

Operation with NI-FBUS Configurator:

The NI-FBUS Configurator is an easy-to-use graphical environment for creating linkages, loops, and a schedule based on the fieldbus concepts.

You can use the NI-FBUS Configurator to configure a fieldbus network as follows:

- Set block and device tags
- Set device addresses
- Create and edit function block control strategies (function block applications)
- Configure vendor-defined function and transducer blocks
- Create and edit schedules
- Read and write to function block control strategies (function block applications)
- Invoke Device Description (DD) methods
- Display DD menus
- Download a configuration
- Verify a configuration and compare it to a saved configuration
- Monitor a downloaded configuration
- Replace a virtual device by a real device
- Save and print a configuration
- Field Xpert SFX100 (see "Hardware and software for onsite and remote operation" section  $\rightarrow \stackrel{\triangle}{=} 73$ )

Note!

For further information please contact your local Endress+Hauser Sales Center.

# Hardware and software for onsite and remote operation

## Commubox FXA195

For intrinsically safe HART communication with FieldCare via the USB interface. For details refer to TI404F/00/EN.

#### Commubox FXA291

The Commubox FXA291 connects Endress+Hauser field devices with a CDI interface (=Endress+Hauser Common Data Interface) to the USB interface of a personal computer or a notebook. For details refer to TI405C/07/EN.

#### Note!

For the following Endress+Hauser devices you need the "ToF adapter FXA291" as an additional accessory:

- Cerabar S PMC71, PMP7x
- Deltabar S PMD7x, FMD7x
- Deltapilot S FMB70

# ToF adapter FXA291

The ToF adapter FXA291 connects the Commubox FXA291 with devices of the ToF platform, pressure equipment and the Gammapilot via the USB port of a computer or laptop. For details refer to KA271F.

## Field Xpert SFX100

Field Xpert is an industrial PDA with integrated 3.5" touchscreen from Endress+Hauser based on Windows Mobile. It communicates via wireless with the optional VIATOR Bluetooth modem or wireless via WiFi and Endress+Hauser's Fieldgate FXA520. Field Xpert also works as a stand-alone device for asset management applications. For details, refer to BA00060S/04/EN.

#### HistoROM®/M-DAT (optional)

 ${\rm HistoROM^{@}/M\text{-}DAT}$  is a memory module which can be attached to every electronic insert. The  ${\rm HistoROM^{@}/M\text{-}DAT}$  can be retrofitted at any stage (order number: 52027785).

## Your benefits

- Quick and safe commissioning of the same measuring points by copying the configuration data of one transmitter to another transmitter.
- Reliable process monitoring thanks to cyclical recording of pressure and sensor temperature measured values.
- Simple diagnosis by recording diverse events such as alarms, configuration changes, counters for measuring range undershoot and overshoot for pressure and temperature as well as user limit overshoot and undershoot for pressure and temperature etc.
- Analysis and graphic evaluation of the events and process parameters via software (contained in scope of supply).

You can copy data from one transmitter to another transmitter when operating a FOUNDATION Fieldbus device via an FF configuration program. You need the Endress+Hauser FieldCare operating program and the Commubox FXA291 service interface and the ToF adapter FXA291 to be able to access the data and events saved in the  $HistoROM^{\otimes}/M-DAT$ .

FieldCare and the service interface Commubox FXA291 and the ToF adapter FXA291.

## FieldCare

FieldCare is an Endress+Hauser asset management tool based on FDT technology. With FieldCare, you can configure all Endress+Hauser devices as well as devices from other manufacturers that support the FDT standard.

FieldCare supports the following functions:

- Configuration of transmitters in offline and online mode
- Loading and saving device data (upload/download)
- HistoROM®/M-DAT analysis
- $\,\blacksquare\,$  Documentation of the measuring point

# Connection options:

- HART via Commubox FXA195 and the USB port on a computer
   PROFIBUS PA via segment coupler and PROFIBUS interface card
- Service interface with Commubox FXA291 and ToF adapter FXA291 (USB).

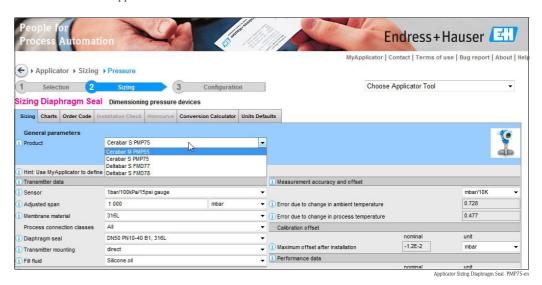

For further information  $\rightarrow$  www.endress.com

# Planning instructions, diaphragm seal systems

Note!

The performance and the permitted range of application of a diaphragm seal system depend on the process isolating diaphragm used, the filling oil, the coupling, the unit design and on the process and ambient conditions present in the individual application.

To help you select the right diaphragm seal system for your applications, Endress+Hauser provides its customers with the free "Applicator Sizing Diaphragm Seal" tool, which is available on CD or online at "www.endress.com/applicator".

For more detailed information or the layout of the optimum diaphragm seal solution for your application, please contact your local Endress+Hauser Sales Center.

## Applications

Diaphragm seal systems should be used if the process and the device should be separated. Diaphragm seal systems offer clear advantages in the following instances:

- In the case of extreme process temperatures
- For aggressive media
- In the case of process media that crystallize
- In the case of corrosive or highly various process media or process media with solids content
- In the case of heterogeneous and fibrous process media
- If extreme measuring point cleaning is necessary, or for very humid mounting locations
- If the measuring point is exposed to severe vibrations
- For mounting locations that are difficult to access

# Design and operation mode

Diaphragm seals are separating equipment between the measuring system and the process.

A diaphragm seal system consists of:

- lacksquare A diaphragm seal
- A capillary tube or temperature isolator if necessary
- Fill fluid
- A pressure transmitter

The process pressure acts via the process isolating diaphragm of a diaphragm seal on the liquid-filled system, which transfers the process pressure onto the sensor of the pressure transmitter.

Endress+Hauser delivers all diaphragm seal systems as welded versions. The system is hermetically sealed, which ensures the highest reliability.

The diaphragm seal determines the application range of the system by:

- The process isolating diaphragm diameter
- The process isolating diaphragm stiffness and material
- The design (oil volume)

#### Diameter of the process isolating diaphragm

The greater the diameter of the process isolating diaphragm (less stiff), the smaller the temperature effect on the measurement result.

## Process isolating diaphragm stiffness

The stiffness depends on the diameter of the process isolating diaphragm, the material, any existing coating and the thickness and shape of the process isolating diaphragm. The process isolating diaphragm thickness and the shape are determined by the design. The stiffness of a process isolating diaphragm of a diaphragm seal influences the temperature operating range and the measuring error caused by temperature effects.

#### Capillary

Capillaries with an internal diameter of 1 mm (0.04 in) are used as standard.

The capillary tube influences the thermal change, the ambient temperature operating range and the response time of a diaphragm seal system as a result of its length and internal diameter.

#### Filling oil

When selecting the filling oil, the media and ambient temperature as well as the operating pressure are of crucial importance. Observe the temperatures and pressures during commissioning and cleaning. A further selection criterion is the compatibility of the filling oil with the requirements of the process media. For this reason, only filling oils that are harmless to health are used in the food industry, such as vegetable oil or silicone oil.

→ See also the following section "Diaphragm seal filling oils".

The filling oil used influences the thermal change, the temperature operating range of a diaphragm seal system and the response time. A temperature change results in a volume change of the filling oil. The volume change is dependent on the expansion coefficient and the volume of the filling oil at calibration temperature (constant in the range: +21 to +33 °C (+70 to 91 °F)).

For example, the filling oil expands in the event of a temperature increase. The additional volume presses against the process isolating diaphragm of a diaphragm seal. The stiffer a diaphragm is, the greater its return force, which counteracts a volume change and acts on the measuring cell together with the operating pressure, thus shifting the zero point.

## Pressure transmitter

The pressure transmitter influences the temperature operating range, the  $T_K$  zero point and the response time as a result of its volume change. The volume change is the volume that has to be shifted to pass through the complete measuring range.

Pressure transmitters from Endress+Hauser are optimized with regard to minimum volume change.

- 1) Version for feature 90 in the order code ( $\rightarrow \stackrel{\triangle}{=} 89 \text{ ff}$ )
- 2) Observe temperature limits of the device ( $\rightarrow \stackrel{\triangle}{=} 33$ ) and the system ( $\rightarrow \stackrel{\triangle}{=} 75$ ).

# Cleaning instructions

- Endress+Hauser offer flushing rings as accessories to clean process isolating diaphragms without taking the transmitters out of the process.
  - For further information please contact your local Endress+Hauser Sales Center.
- We recommend you perform CIP (cleaning in place (hot water)) before SIP (sterilization in place (steam)) for pipe diaphragm seals.

A frequent use of sterilization in place (SIP) will increase the stress on the process isolating diaphragm. Under unfavorable circumstances in the long term view we cannot exclude that a frequent temperature change could lead to a material fatigue of the process isolating diaphragm and possibly to a leakage.

## Installation instructions

# Diaphragm seal systems

- The diaphragm seal together with the transmitter form a closed, calibrated system, which is filled through ports in the diaphragm seal and in the measuring system of the transmitter. These ports are sealed and must not be opened.
- For devices with a temperature isolator or capillary, a suitable fastening device (mounting bracket) is recommended.
- For more detailed installation instructions, Endress+Hauser provides its customers with the free "Applicator Sizing Diaphragm Seal" tool, which is available on CD or can be downloaded online at "www.endress.com/applicator".

# Capillary

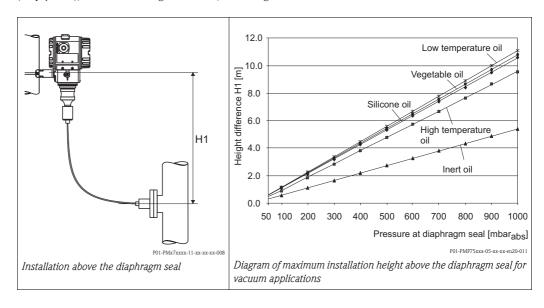

In order to obtain more precise measurement results and to avoid a defect in the device, mount the capillaries as follows:

- vibration-free (in order to avoid additional pressure fluctuations)
- not in the vicinity of heating or cooling lines
- insulate if the ambient temperature is below or above the reference temperature
- with a bending radius of  $\geq$  100 mm (3.94 in).
- When using diaphragm seal systems with capillaries, sufficient strain relief must be allowed for in order to prevent the capillary bending down (capillary bending radius ≥ 100 mm (3.94 in)).
- In the case of devices with diaphragm seals and capillaries, the zero point shift caused by the hydrostatic pressure of the filling liquid column in the capillaries must be taken into account when selecting the measuring cell. If a measuring cell with a small measuring range is selected, a position adjustment can cause range violation.

# Vacuum applications

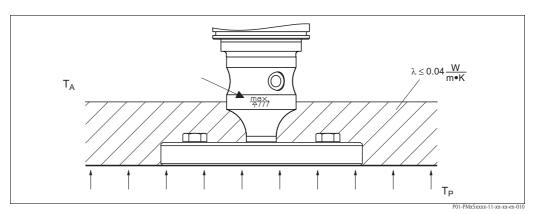

For applications under vacuum, Endress+Hauser recommends mounting the pressure transmitter below the diaphragm seal. This prevents vacuum load of the diaphragm seal caused by the presence of fill fluid in the capillary.

When the pressure transmitter is mounted above the diaphragm seal, the maximum height difference H1 in accordance with the illustration below must not be exceeded. The maximum height difference is dependent on the density of the filling oil and the smallest ever pressure that is permitted to occur at the diaphragm seal (empty tank), see the following illustration, on the right.

## Heat insulation

The PMP75 must only be insulated up to a certain height. The maximum permitted insulation height is indicated on the devices and applies to an insulation material with a heat conductivity  $\leq 0.04~\text{W/(m}~\text{x}~\text{K)}$  and to the maximum permitted ambient and process temperature. The data were determined under the most critical application "quiescent air".

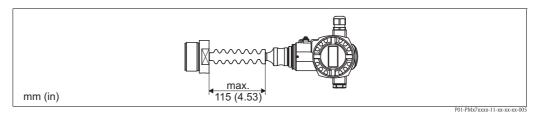

Maximum insulation height, here indicated on a PMP75 with a flange

# Mounting with temperature isolator

Endress+Hauser recommends the use of temperature isolators in the event of constant extreme media temperatures which cause the maximum permissible electronics temperature of +85 °C (185 °F) to be exceeded. Depending on the filling oil used, diaphragm seal systems with temperature isolators can be used for maximum temperatures of up to 260 °C (500 °F).  $\rightarrow$  Temperature application limits, see  $\rightarrow$   $\stackrel{\triangle}{=}$  77, "Diaphragm seal filling oils" section. To minimize the influence of rising heat, Endress+Hauser recommends the device be mounted horizontally or with the housing pointing downwards.

The additional installation height also brings about a zero point shift of maximum 21 mbar (0.315 psi) due to the hydrostatic column in the temperature isolator. You can correct this zero point shift at the device.

PMP75 with temperature isolator, material 316L (1.4404)

# Certificates and approvals

#### CE mark

The device meets the legal requirements of the relevant EC directives.

Endress+Hauser confirms that the device has been successfully tested by applying the CE mark.

#### Ex approvals

- ATEX
- FM
- CSA
- NEPSI
- IECEx
- TIIS
- GOST
- Also combinations of different approvals

# Suitability for hygienic processes

The Cerabar S is suitable for use in hygienic processes.

Overview of suitable process connections from Page 36.

Many versions meet the requirements of 3A-Sanitary Standard No. 74 and are certified by the EHEDG.

Suitable fittings and seals must be used to ensure hygiene-compliant design according to the specifications of 3A and EHEDG.

The gap-free connections can be cleaned without residue using the usual cleaning methods.

## Marine certificate

- GL
- ABS

# Functional safety SIL/ IEC 61508 Declaration of Conformity (optional)

The Cerabar S devices with a 4 to 20 mA output signal have been developed in accordance with the IEC 61508 standard. These devices can be used to monitor the process level and pressure up to SIL 3.

For a detailed description of the safety functions with Cerabar S, settings and functional safety data, see the "Functional safety manual – Cerabar S" SD00190P.

For devices up to SIL 3 / IEC 61508 Declaration of Conformity, see  $\rightarrow \blacksquare$  82 ff, feature 100 "Additional option 1" and feature 110 "Additional option 2" version E "SIL / IEC 61508 Declaration of Conformity".

# Overfill prevention

#### WHG: ZE00260P/00/DE

# CRN approvals

Some device versions have CRN approval. For a CRN-approved device, a CRN-approved process connection ( $\rightarrow \stackrel{\cong}{=} 35 \text{ ff}$ , "Process connection") has to be ordered with a CSA approval ( $\rightarrow \stackrel{\cong}{=} 82 \text{ ff}$ , feature 10 "Approval"). PMP75 devices with a capillary are not CRN-approved. These devices are fitted with a separate plate bearing the registration number 0F10525.5C.

# Pressure Equipment Directive (PED)

The devices PMC71, PMP71 and PMP75 correspond to Article 3 (3) of the EC directive 97/23/EC (Pressure Equipment Directive) and have been designed and manufactured according to good engineering practice.

The following also applies:

- PMP71 with threaded connection and internal process isolating diaphragm PN > 200 as well as oval flange adapter PN > 200:
  - Suitable for stable gases in group 1, category I
- PMP75 with pipe diaphragm seal ≥ 1.5"/PN 40:
   Suitable for stable gases in group 1, category II
- PMP75 with separators PN >  $200 \ge 1.5$ "/PN40: Suitable for stable gases in group 1, category I
- PMP75 with threaded connection PN > 200

# Drinking water approval

PMC71/PMP71: NSF 61 approval

## Standards and guidelines

DIN EN 60770 (IEC 60770):

Transmitters for use in industrial-process control systems

Part 1: Methods for performance evaluation

DIN 16086:

Electrical pressure measuring instruments, pressure sensors, pressure transmitters, pressure measuring instruments, concepts, specifications on data sheets

EN 61326-X:

EMC product family standard for electrical equipment for measurement, control and laboratory use.

WELMEC guide 8.8 "General and Administrative Aspects of the Voluntary System of Modular Evaluation of Measuring instruments under the MID".

OIML R117-1 Edition 2007 (E) "Dynamic measuring systems for liquids other than water".

EN 12405-1/A1 Edition 2006 "Gas meters - Conversion devices - Part 1: Volume conversion".

## Approvals for custody transfer

All aspects of OIML R117-1 Edition 2007 (E) and EN 12405-1/A1 Edition 2006 are fulfilled.

#### **MID Parts Certificate**

TC7975

Classification of process sealing between electrical systems and (flammable or combustible) process fluids in accordance with ANSI/ISA 12.27.01 Endress+Hauser devices are designed in accordance with ANSI/ISA 12.27.01. allowing the user to waive the use and save the cost of installing external secondary process seals in the conduit as required by the process sealing sections of ANSI/NFPA 70 (NEC) and CSA 22.1 (CEC). These instruments comply with the North American installation practice and provide a very safe and cost-saving installation for pressurized applications with hazardous fluids. Please refer to the following table for the seal class assigned (single seal or dual seal):

Device	Approval	Remark	Single seal MWP	Dual seal MWP
PMC71	CSA C/US IS, XP	except separate housing	-	60 bar (900 psi)
PIVIC/I	CSA C/US IS	with separate housing	40 bar (600 psi)	-
	CSA C/US XP, XP+IS	except separate housing	400 bar (6000 psi)	-
PMP71	CSA C/US IS	except separate housing	> 200 to 400 bar (> 3000 to 6000 psi)	≤ 200 bar (3000 psi)
	CSA C/US IS	with separate housing	400 bar (6000 psi)	-
	XP, XP+IS	except separate housing	400 bar (6000 psi)	-
PMP75	CSA C/US IS	except separate housing	> 200 to 400 bar (> 3000 to 6000 psi)	≤ 200 bar (3000 psi)
	CSA C/US IS	with separate housing	400 bar (6000 psi)	-

Further information can be found in the control drawings of the relevant devices.

# Configuration data sheet

Level

The following configuration data sheet has to be filled in and to be included in the order when the option "F-Customised level" or the option "I-Customised level + 5-point works calibration certificate" has been selected in feature 50 "Calibration; Unit" of the product structure.

Pressure Engineering Unit				Output Unit (Scaled unit)				
	mmHg ☐ Pas ☐ inHg ☐ hP ☐ kP. ☐ gf/cm² ☐ MI	a a Pa	torr  g/cm² kg/cm² lb/ft² atm	Mass  kg t lb	Length  m dm cm mm ft inch	Volume  1 hl m³ ft³	Volume  USgal impgal USbblPET	Percent  %
